>>there
>>to fund them adequately. Heck, some schools don't have enough books!
>
> And NASA is manhandling those school board members to the ground and
>stealing the money from them?

No, but the Feds hand out unfunded mandates that the schools must meet. How about this: Any Federal mandate must also carry with it funds to make them happen?

>>>>Why can't the USA have the best educational systems in the world? The
>>>>best surface transportation systems? The best energy systems? Energy
>>>>independence?
>>>
>>> Money.
>>
>>Exactly. It gets spent on giving congresscritters joyrides and in replacing
>>destroyed orbiters.
>
> We'll spend more money trying to defeat gay marriage than what replacing
>Columbia and Challenger would cost.

I don't think so. Besides, why should defeating gay marriage cost taxpayers any money at all? Indeed, why should it be defeated - if gay people can get 'married' (in the legal sense), they'll pay more taxes because of the income tax marriage penalty, thereby raising tax revenues.

Say, there's the money for your expanded space program!
>
>Besides...we HAVEN'T replaced them...Challenger splashed 18 years ago

Yep.
>
> Internal security of our own borders.

That's because we play the game at both ends. On the one hand, we say we want security. On the other hand, we want the cheap immigrant labor and the money tourists and students spend here.

They make a lot more than those things. Look inside a new computer, for
example. Look at many other manufactured goods that are far more complex than
rubber duckies and tshirts.

Or ask KB3EIA. Recently, an entire glass plant near him was sold, dismantled
and shipped to Anang Province in China, where it will be reassembled and used
to make glass products. The reason given by those who did the deal was that
American workers' wages and benefits cost too much.

>>> I'm about HOW we can do things.

You're avoiding saying how many more tax dollars you're willing to pay. That's the bottom line. People are all for all sorts of things until it comes time to pay for them. Then they scream bloody murder about being ripped off.
>
> I point blank said earlier that I didn't have all the answers.

Then understand that you can't have everything you want for free.

>
> They proved that THIS method is a spectrum polluter.

The *concept* is just plain stupid. Did you see my post about the stormwater ditch? That's what BPL is electrically equivalent to.

>Can there NEVER be a development that might work?

Depends what you mean by "work". The systems do "work" in the sense that they transmit data from A to B. The problem is that they leak RF all over the place because the power lines are simply leaky at RF frequencies. They radiate. It's basic physics. Wires with RF in them radiate, and long unshileded wires way up in the air with HF in them radiate really well. Various forms of coding and such simply don't fix the basic problem.

Now if someone wants to install shielded power lines and equipment, a BPL system can work without interference. But such a system would cost more to build than simply running new coax or fiber.

Yup, that's why places have entire staffs of PC jockeys that work full time to beat the things into submission. We who own Macs, at least where I work, have to maintain their own computers. And at least where I work, all the Mac users are artists, not computer jocks (with the exception of me)

Yup, but I wanna run what I need to do my job and hobby. I could care less about the other apps. Sometimes I think PCphiles would insist on only one type of car for the entire world with that mindset.

I do agree that there are more ham apps on PC, which is a big reason why I have one at home. I'm likely to pick up an Imac at salvage to try out the new Mac Ham apps tho'

I won't deny that under the current state of affairs, people should practice safe computing. And if a person is running illegal software their ass should be busted.

My point is that the crap software is so insecure that the bad situation comes about anyhow.

Glad I go an IT pro here, as I have been wondering something for a while. Isn't it possible to find these infected devils and isolate them somehow? Might be a naive question, but I'm not an IT person, just a program jock.

In article <20040630182034.19885.00000582@mb-m06.aol.com>, lenover21@aol.com (Len Over 21) writes:

>Oddly enough, despite the urban myth of some objecting to BPL,
> the FCC does NOT have any power to stop Access BPL!

Actually, they do.
>
> All the FCC can do is put limits on the incidental RF radiation
> from a BPL system, then enforce it.

It would be a simple matter for FCC to set the levels so low that none of the systems could come close to meeting it. That would effectively ban it.

But FCC won't do that. Yet.

> The FCC already does
> that with other communications service providers (cable TV in
> main but also telephone cable and incidental RF radiation from
> electric power lines). The enforcement is going to be a total
> bitch of a job for BPL. The FCC is way, way down on facilities

> the Cedar Rapids group did, apparently successfully. But, that
> takes a concerted group effort in each amateur radio locality.
> ARRL can't be dependent as the "big gun" to fight BPL.

But they *can* give needed help, and act to coordinate efforts. And if nothing else, ARRL has continued to publicize the BPL threat both inside and outside the amateur community, and to spread accurate information on what is going on. The Iowa group and the affected amateur both publicly thanked ARRL for its help.

> They
> aren't staffed or budgeted to oversee all the possible BPL

> to quadruple or quintuple to approach being able to do that...and
> still not be enough.

How do you know what it would take, Len? Have you done it?
Have you sent a check to help out?

> Individual industry and local government (state on down) groups
> haven't shown they have enough clout to make a difference in the
> Commission's enthusiasm for BPL.

Regulation of radio is specifically a Federal function. State and local governments cannot have any real clout - otherwise they'd be requiring licenses and fees.

> Pandora's Box has already
> been opened. Lots of such Boxes in all of the 50 states. It's
> going to be one helluva big task to close them.

Maybe. Or maybe a few good precedents will be set that will cause the rest to give up.

Many highly-touted new technologies have fallen by the wayside once their disadvantages became known.

There's also the economic angle. The price of DSL keeps dropping, as does Wi-Fi, while the areas covered by those technologies and cable keep expanding. If BPL cannot compete in price and performance, it's all over.

It is interesting to note that the Cedar Rapids system used (past tense, thankfully) BPL to get the signals to poles near the subscriber's homes, but then depended on Wi-Fi for the actual "connection" to the customer. Thus, they can replace the BPL component with fiber or coax with no effect on the customer.

Of course from both an engineering and common-sense standpoint, it would make sense to go the fiber/Wi-Fi route from the very beginning, if the goal is broadband access without having to do work on the customer's premises. But both engineering and common sense are sadly lacking in some places - even among the professionals who are trying to bring us BPL.
>
> Say goodbye to low-level HF signals if BPL comes to your QTH,
> at least for a while.

Depends on the frequencies used. Not all BPL systems use the entire HF spectrum. See ARRL descriptions of the Penn Yan (NY) system.

> Remember which administration brought out
> the spectre of Access BPL to this nation while you and everyone

>

Mike,

My only point is that other software *also* has holes. The only reason Internet Explorer has been singled out is that it is so popular and widespread. Heck, there may be some folks with the old TRS-80 model 1 with a modem and bulletin board software. I'd bet there are no viruses written for it. I wonder why ... LOL.

I.E. is a big and tempting target, but not any more or less buggy than other browsers (or, as I mentioned, Windoze vs other systems). Other operating systems may be more stable (such as Linux), but have security problems as well.

Best regards from Rochester, NY
Jim

Sometimes people don't have a choice. For example, my employer will allow only IE on company computers. I had put Mozilla on my company PC and got my hands slapped. Sometimes I use OE to sendmail from my laptop but never use it to receive mail. Most of the time I use Linux on my personal computers.

The real problems are that we have a lot of non-technical people using the Internet that obviously don't know what they are doing and they don't think that Internet security is their responsibility. Another problem is all the crappy program code that is being written without any regard to providing security to prevent such things as buffer overflow exploits of their code. As for tracking down the spammers and black hat hackers, good luck. Ultimately, though, we'll only be able to reduce the amount of security problems and we'll never be able to eliminate them. There's just too many jerks out there that don't have anything better to do with their time.

Hey Jim. I think IE is not only a big target, it is an easy one too.
It's integration with the OS looks good on the surface but is a fatal flaw.

I don't think I can convince too many people of that tho', as the
arguments are getting redundant at this point. If you wish, use IE and
Outlook, just be sure to never ever miss an update, and hope the update
works for you. I'll do a different path.

So I'll just have to say "Practice safe computing, in whatever form you
may wish, and all be careful, eh"?

It wasn't an accusation, Mike. I was simply pointing out that some activities more risky than others (and gave an example). If you're not comfortable with that example, we could use email as another (for example, no matter how many times you warn people not to, some just can't seem to resist opening those questionable files).

> Yup, that's why places have entire staffs

> where I work, all the Mac users are artists,
> not computer jocks (with the exception of
> me)

There is an entire staff because there are a lot of computers, not a single computer you're maintaining yourself. We have a number of Macs at the local college and I see many of the same types of problems - missing or damaged drivers, questionable software installed, tampering with things that should be left alone, and so on. Some are downright silly. For example, there isn't a week that goes by that we don't see a computer problem traced to someone dragging things out of the System folder.

> (snip) Sometimes I think PCphiles would
> insist on only one type of car for the entire
> world with that mindset.

You're assuming I'm a "PCphile." I purchased my first Apple in 1981 and first Mac in 1986. Even though I used other computers, the Mac was my main focus for many years. I recently switched focus to Windows, but still own two PowerBooks to allow me to keep up with events in that platform. The college is slowly getting rid of the Macs, but a number of teachers still use them (including my wife).

> Glad I go an IT pro here, as I have been
> wondering something for a while. Isn't it
> possible to find these infected devils and
> isolate them somehow? Might be a naive

> question, but I'm not an IT person, just a
> program jock.

Since they're very unpredictable, it's not really that easy on an active computer. Most large IT departments have computers sat aside to solely watch how these things work and what exactly they do. That information is then used to develop tactics to deal with threats to other computers. The information is also widely shared, and can usually be found on the internet very shortly after a new threat is discovered. Indeed, by the time we see the results of a new virus or whatever, information about it is usually already available.

>>
>>Well, I still see the Manned Space Program as beiong over forty years
>>old,
>>and only 17 Americans have died in direct space flight operations or
>>preparations.
>
>Out of how many that have flown?

Hmmmmmm.....

Six Mercury Flights: 6

Ten Gemini Flights: 20 (12 flights...Only 10 were manned)

17 Apollo flights: 51

Apollo Soyuz: 3

Skylab (3 msns) 9

Shuttle Missions: 560 (112 missions, average 5 persons per mission)

_____
649 (give or take a couple)

Of course if you want to get REAL nit-picky, we can discount folks like Storey Musgrave and others who have flown more than one, so we'll just give you the benefit of the doubt here and say 640.

That's less than 3 percent of the American manned space effort to date. That means that over 97 percent of all American manned space missions are successful.

And that doesn't take into account the crews shuttled to and from MIR.

>>>> The boosters for the Shuttle exploded once, we fixed that problem.
>>>
>>>Then another problem surfaced. Is it really fixed?

If we don't even explore the OPTIONS, Jim, how will we ever know what's
practical?

>>>Other people dream of doing great things. Engineers do them.
>>
>> Engieneers do them when adequately funded!
>
>How much has SpaceShipOne cost?

How far would SpaceShipOne have gotten if it wasn't bankrolled with
$25M...?!?!

How far DID it get? High altitude research balloons do the same thing a
lot cheaper AND since the 1930's or 40's.

>> DaVinci dreamed of a great many things that have only been made
>>practical
>>in the last 100 years...Because we spent the money on research to develop
>the
>>materials to let the enginees make it happen!

>
>DaVinci sketched vague ideas. It took a lot of time, work and development to
>make real machines.

Uh huh.

The "Voyager" was a vague idea on a napkin.

DaVinci's "vague ideas" were pretty detailed for the era. Imagine what he
could ahve done had he had the materials with which to really do them.

From an AOL news link:

(QUOTE)

(IRT the Cassini Saturn mission)

The orbital insertion came after two decades of work by scientists in the United States and 17 nations. The $3.3 billion mission was funded by NASA, the European Space Agency and the Italian Space Agency.

(UNQUOTE)

Which in English means the United States paid over $3B for this and Italy got some press as being involved in space exploration. No doubt in exchange for our continued use of Aviano.

Cudda used THAT $3B right here on Earth too...

OR...Cudda built two new shuttles with spares.

OR...Cudda funded a LOT of lead-in research to a new lunar program, right ehre "in the neighborhood". Chances are unless we stumble on to warp drive, man will never get any closer to Saturn than those robots.

The reality is quite different. All three agencies contributed money
and resources. The result is a very sophisticated probe that will
spend *years* studying the ringed planet.
>
> Cudda used THAT $3B right here on Earth too...

Yep.
>
> OR...Cudda built two new shuttles with spares.

When Challenger blew up, the quoted price I saw to replace the *just
the lost hardware* was $2 billion. In 1986 dollars.

Cassini/Huygens $3.3 billion is spread out over two decades. Comes to
less about $150 million a year.
>
> OR...Cudda funded a LOT of lead-in research to a new lunar program, right
> ehre "in the neighborhood".

Don't need research. Need development.

> Chances are unless we stumble on to warp drive,
> man will never get any closer to Saturn than those robots.
>
Not true at all.

Seems to me, Steve, that you're against unmanned probes like
Cassini/Huygens and the Mars rovers, but *for* much more expensive
manned missions - even though we stand to learn much more science from
the unmanned probes. And the technology developed for the unmanned
probes arguably has more application here on earth than that developed
for manned flight.

What's up with that?

From: N2EY@AOL.COM
Message-ID: <c2356669.0407010825.18991923@posting.google.com>
Source record: 93646

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of June 30, 2004:

Novice - 31,422 (decrease of 17,907)
Technician - 265,199 (increase of 59,805)
Technician Plus - 58,889 (decrease of 69,971)
General - 140,237 (increase of 27,560)
Advanced - 79,928 (decrease of 19,854)
Extra - 105,635 (increase of 26,885)
Total - 681,310 (increase of 6,518)

An unusually high number of current licenses are due to expire in July.

>He's just nuts.

"...abuse of gaverment power..."...?!?!?

>Imagine if this fruitcake did actually have some government power to
>abuse.

Cute, what you consider to be a "fruitcake".

We DO have your posts in archives here, Brain.

Your initial misrepresentation of your identity when you changed to this
screen name.

Your misrepresentation of things you claimed to have done.

Your "admiration" of a person who is a documented pathological liar.

The last few DAYS of "baby babble" in a public fourm.

>He shot himself in the foot. Now he's in pain and lashing out.

No pain here...Unless you count the "stitches" in my side from laughing so
hard at your behaviour and subsequent efforts to hide from it.

>Welp, I think you're the last guy on R.R.A.P. that will address him.
>Where will he go when even you won't play insane mental gymnastics
>with him? To his self-made yahoo group where he >>>is<<< the judge,
>prosecutor, jury, executioner, undertaker, and worm.

Not true, but hey, if it makes you warm-and-fuzzy to think it...

>He's only the worm on here.

Nope...there's two others...

>> I happen to personally like fruitcake, all the candied stuff and the
>> nuts in that, tasty to me.
>
>Love it. Even the cheap stuff at the drug marts.

And no doubt you are well known at them.

>Happy Fourth to you. Enjoy the beer, brats, and fireworks.

Patiently awaiting Lennie's next installation of how he and the 71st saved all of Korea from certain Communist doom as he single handedly passed 1.2 million messages.

Uh huh...

True, as it stands right now, it looks like the group is gonna splinter off
into two distinct groups. So, probably next year you guys can work 2
different Midland County, Michigan stations. The "old school" group will do
things their way, and the "new school" group can do things their own way
too.... Almost sounds like a second club overall forming for this county
instead of just the one.

> Plus there's the whole liability question...

I agree with ya on the liability issue.... There is a clear difference between gaining access in a true emergency versus gaining access to a property for an alleged "training exersize." In a real emergency, especially one involved under that marshall law concept, you could be placed anywhere the command structure wants you to set up, regardless of property owner's permission or not.

I do have to base the next line or two by stating it to be relating to where I live locally, but I beleive that logically we as ARES/RACES would most likely be set up in or at places like county/city owned properties/buildings, quite possibly hospitals, law enforcement/fire/ems buildings, the red cross etc. Logic would dictate to me that as a reasonable guess as to where we personally would most likely set up in a real emergency. (as one larger group OR as individual smaller stations)

All the entertaining eccentrics have been run off
the air by over-zealous rules worshippers,
leaving behind only plain vanilla,
bland and boring:

"blah blah blah the rig,
blah blah blah the weather,
blah blah blah I got DXCC for the umpteenth time,
blah blah blah my arthritis."

Inanities abound from band edge to band edge.
Oh, for the rough-n-tumble of 75 meters in 1972.
Hams did lots of public service,
actually handled real traffic instead of phonys to each other,
knew code at 20 WPM+,
NEVER said "10-4" on 2 meters
and still managed to be hilariously
entertaining from time to time.
I contend that a few goofs
on 75 and 20 did no harm whatsoever,
except to the tilted sensiblities
of obsessive/compulsives.
The HF phone bands today are little more
than a cure for insomnia.

Since Tech Plus licenses are being listed as Tech upon renewal, I suggest
combining the Tech and Tech Plus numbers in the two lists.

>Couldn't build more Saturns, as the tooling is gone, as well as the
>supply path.

So we'd have to rebuild the tooling and supply systems in order to build the rockets. Which could take longer than it did the first time.
>
>I wouldn't say reinvented, but it would need to be re-done. I suspect
>that a new moon mission would be much much different. I would guess
>in-orbit assembly for the propulsion system, possibly the ship.

That was considered for Apollo, but it turns out the total rocket power needed is greater than sending an all-in-one mission.

As enormous as Saturn Vs were, they were just adequate for the job. That's a good thing.
>
>>> For those who insist that "we need to spend the money here", I ask
>WHERE
>>>in space are you going to spend that money?

>> We need to spend the money in ways that will directly benefit people
>> here. And address problems long-term.
>
> Well, that leaves the field wide open. Some would have us believe that
>we would be better to spend the money feeding the world's poor. Of
>course, then you end up with a lot of fat poor people that will continue
>eating your food until you run out, then you can starve along with 'em! 8^)

Or the money could be spent teaching the world's poor how not to be poor. The old "give a man a fish" thing.

>>> A bit of government subsidising would promote yet another wave of
>>>technical advencement.
>>
>> Agreed - spent in the right places. That's the principle that drives
>> those "Tax and Spend Democrats!!!"
>
> As opposed to the "Don't tax but spend like a drunken sailor" other types?

Yep.

>> Trips to the Moon and Mars will require a lot more than "a bit of
>> government spending".

>> It was in the Nixon/Ford years that the big NASA cutbacks took place.
>> Too much money, they said. There was supposed to be an Apollo 18 lunar
>> mission - it was cut and the Saturn V for it became a museum piece.
>> Literally.
>
> We found out we could make more money selling our hats to each
>other.... for a little while anyhoo.

Meanwhile the hats were made elsewhere. And it wll worked up until people
stopped wearing hats because nobody could afford them anymore.

>> All of NASA's manned budget went into the shuttle, which is a
>> marvelous system with a 1 in 75 chance of complete mission failure.
>> The number of shuttles lost compared to the number of missions flown
>> verifies the reliability analysis.
>>
>> The reason the USA made the big space commitments was because JFK and
>> LBJ (guess what party) pushed for them. They were essentially done to

>
>>>Unless you want
>>>to ressurect the "world is flat" or the "we never went to the Moon"
>>>conspiracies, what other legit reasons can you think of to NOT do it?
>>
>> Simple: The costs outweigh the benefits. There are easier, cheaper,
>> faster ways to get the benefits and solve the problems we have on
>> earth.
>
> Actually, I don't think there is a way to solve those problems.

The ones on earth? I disagree!

I'm old enough to remember when the phrase "reaching for the moon" meant someone was trying to do that which could not be done. Yet it was done.

There was a time when it was seriously argued that some men had to be enslaved, either literally or economically, because nobody would voluntarily do those jobs. That problem was solved

There was a time when it was seriously argued that women could not be allowed to vote because it would cause all kinds of problems. Turned out not to bve a problem.

There was a time when it was considered impossible to teach most children to read and write because their work was 'needed' in the farms, mills and factories.
>
>> Space and war may help with some things but they are horribly

>> inefficient means of progress.
>>
>> None of this means we shouldn't go into space, just that we need to do
>> so in a way that is balanced with other needs and programs.

> Ahh, but whose balance, Jim?

Mine. ;-)

>I think that humankind badly NEEDS the
>sense of exploration and adventure and the frontier effect of space. My
>price tag of balance is a lot higher than yours, which is in turn a lot
>higher than a lot of other people's

Of course.

But when space exploration is used as a way of distracting people from solvable
earth problems, that's not a good thing.
>
> If we're not their, and it isn't humans there, maybe it's just time to
>sit down and watch the history channel. We might see a story about us
>there some day.
>
What's all the rush? Space has been there for a lot longer than we have, and
will be there long after we are gone. We can take our time and do it in a
planned way, or rush headlong and wastefully, and accomplish little.

31. response to UPLC new release/comments on BPL

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-02 01:12:23 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <mIKcnToxebM3K3ndUSdV9g@ptd.net>
Source record: 93705

Follows, for anyone who's interested, my response to the insulting, inaccurate press release (and comments to the FCC) from the UPLC:

Dear Ms. Paterson,

I find the content of your press release (which I understand is derived from comments that UPLC has filed with the FCC) to be inaccurate, misleading, and gratuitously insulting to amateur radio operators and the Amateur Radio Service in general.

In fact, the inaccuracies are so glaring that I am tempted to request that the FCC apply its rules requiring truthfulness in statements made to the Commission and consider sanctions against the UPLC.

I will comment, in context, in the copy of your press release below. Hopefully your e-mail program will preserve the distinguishing color I've used for my comments in composing this message to make it easy for you to identify my comments. Please note that these comments are my *personal* views, as an individual amateur radio operator and an RF engineer of over 33 years experience, and that I am not speaking in any official capacity (for my employer or any of the organizations that I sometimes represent in regulatory matters).

UPLC Sets the Record Straight on BPL Interference

WASHINGTON - The FCC's proposals are appropriate;

They are not ... the current radiated emissions limits for carrier current systems were developed long ago in contemplation of some finite number and distribution of essentially point-source radiators, NOT in contemplation of "access BPL," which employs what amounts to a huge, geographically distributed antenna system that field measurements show radiates at (and in some cases above) those limits virtually everywhere it exists.

NTIA's recommendations and ARRL's naysaying are misguided.

As an RF engineer, I find NTIA's conclusions that "access BPL" does pose a significant risk of interference to licensed HF/low VHF communications services that use the spectrum "access BPL" proposes to use to be consistent with my own field measurements with calibrated test equipment, the ARRL's measurements (and those of their independent contractor), and the growing body of evidence from the various "trial areas" around the country, where interference has been documented, but not resolved by the responsible BPL system operators.

The United Power Line Council (UPLC) forcefully replied to concerns about harmful interference from BPL in reply comments filed today, and urged the FCC to move forward quickly to develop rules that will encourage more development and deployment of BPL services to the public. Specifically, UPLC expressed its concerns with findings and recommendations by the National Telecommunications and Information Administration (NTIA) that overstate the risk of interference from BPL.

In my view, if anything, NTIA's position UNDERSTATES the risk of interference from BPL. The "commerce" side of NTIA is clearly being driven by political forces to "soft-pedal" the risk to some degree.

NTIA's proposals would place undue operating restrictions and impose arbitrary measurement guidelines that threaten to delay the deployment of BPL or preclude it altogether;

NTIA's proposals don't go far enough ... power companies have been notoriously slow to resolve simple, localized radio interference resulting from such simple things as bad insulators, etc. I have little/no confidence that they will be more responsive in dealing with interference from BPL - and the results to date from the "trial areas" support the conclusion that the level, and promptness, of resolution of interference complaints is more or less non-existent, despite the requirements of the FCC's Part 15 rules that BPL operators cease operation unless or until they can resolve interference.

The BPL industry's response to interference concerns/complaints to date has been largely a game of denial and stalling.

however, the UPLC expressed its interest in working with NTIA going forward. Moreover, UPLC did agree with NTIA that BPL "has been studied to death already and the FCC should adopt rules without further delay."

This is absurd. Despite the BPL industry's denials, and the fact that significant interference has been documented in limited "trial areas" - interference that will only affect wider areas and be exacerbated by large-scale deployments with large numbers of users - there are many unanswered questions about if/how BPL can adequately protect the licensed users of the HF/low VHF spectrum.

Unless/until these questions are resolved, "access BPL" deployments should be put on hold.

UPLC reminded the Commission that BPL is not just another broadband access platform, but one that enables applications in ways that other technologies do not by providing enhanced utility applications, home networking, symmetric speeds, and low latency for a variety of services. Unique applications will improve the efficiency and reliability of electric service to utility customers as well as promote broadband competition for consumers, carriers and ISPs - saving lives, reducing electric generation costs, remedying the digital divide and conquering the DSL- cable duopoly.

This is clearly little more than self-serving marketing rhetoric.

HF/VHF "access BPL" will be limited in the data rates that it will be able to support, due to the hostile nature of the transmission medium (MV and HV power distribution lines) that are not good carriers of RF, have high noise levels, impedance discontinuities, etc.

As for the BPL industry's attempts to "push the hot button" of "universal broadband" (alluding to serving rural America), the economics aren't there for a system that requires repeaters on the order of every 300-500 meters along the lines to overcome noise and losses. I don't see how anyone can make a business case for serving rural customers (many

repeater spans apart) in an economically viable fashion, given the large amount of infrastructure that would be required to reach them.

(It is interesting to note that all of the BPL "trial areas" that I am aware of are in urban or suburban areas - not rural areas. In many cases, these areas already have either cable modem service, or DSL service, or both ...)

UPLC also commented on amateur radio opposition to the technology, urging the Commission to ignore "armchair amateurs that still use vacuum tube transmitters"

This gratuitous attack on amateur radio operators is inaccurate, offensive, and uncalled for.

The Amateur Radio Service, including ARES and RACES, provide essential emergency and disaster communications services to government EMS agencies and private agencies such as the Red Cross and the Salvation Army.

Amateur Radio has been recognized by Congress, the Department of Homeland Security, and a plethora of state, local, and private emergency response/disaster relief agencies as a vital part of America's national emergency communications infrastructure.

and listen to the reputable companies and entrepreneurs who are the real experts on BPL and who have overcome enormous technical obstacles to make BPL a reality in the U.S.

Are you referring to the "experts" who deny the existence of any interference issues, despite a large (and growing) body of evidence to the contrary?

Are you referring to the "experts" who insist that "power lines don't radiate as antennas" and/or "BPL is a point source radiator," despite the fact that these statements are contrary to both well-established electromagnetic theory and field measurements?

All the field trials over the years in various parts of the country have shown that the risk of interference from BPL is extraordinarily low, because it produces only minimal radio frequency energy at a few points in the system.

This is patently false, as evidenced by interference complaints, and all of the measurements and studies referenced above.

Moreover, these systems will incorporate adaptive interference mitigation capabilities that will effectively remedy any interference that might result to fixed and mobile operations in the High Frequency (HF) band (1.7-80 MHz).

Where's the beef?

These unspecified, unimplemented "mitigation capabilities" are, for the foreseeable future, an unfulfilled promise (and a promise that may never be fulfilled).

Besides, in your own words above, you imply that imposing such requirements is something that you oppose.

Finally, as pointed out above, electric utilities have generally been dismally poor at resolving even simple, incidental power line interference problems - and those operating BPL "trial systems" have, to date generally denied interference and done little or nothing to resolve it. (A notable exception is the case of Alliant Energy of Cedar Rapids, IA - who have recently terminated their BPL trials as a result of their inability to remedy interference that has existed since their system went active on March 30, 2004 - see

http://www.arrl.org/news/stories/2004/06/28/2/?nc=1) - but only after the ARRL filed a formal complaint with the FCC asking that they order the system shut down and impose a $10,000 fine.)

"BPL is an exciting technology with a promising future, but it's dependent on the FCC to develop rules that will encourage companies to deploy systems, both for better electrical service and competitive broadband," stated Bill Moroney, President and CEO of UPLC.

The FCC's primary responsibility, under its own rules and the ITU Radio Regulations, is to protect the many and varied licensed services that have allocations in the 2-80 MHz frequency range from the harmful interference that (at least the current incarnations of) "access BPL" cause.

"If the goal of this Administration is universal affordable broadband access by 2007, BPL is the best hope of achieving it."

With all due respect - hogwash - there are other, readily available, non-interfering solutions such as wireless broadband access in higher, more suitable frequency ranges. As stated above, my personal view is that the "promise" of BPL to "serve rural America" is a pipe dream because the huge amount of infrastructure that would be required would render it economically infeasible at any reasonable cost to rural consumers and businesses.

[I snipped the "who we are" paragraphs at the end of your press release, since I presume that you know who you are ...]

To quote Carl's letter: "With all due respect - Hogwash".
I don't think it is a good letter at all. It would have been better if Carl had delayed in sending it for several days, cooled his jets and had written a toned-down response. The version he sent is inflammatory and combative. Then again, Carl is generally inflammatory and combative. At least he left out the "electronic paintball wars" stuff in his description of amateur radio.

That ain't a happening thng.

You know what I was so "impressed" with while overseas doing the things
Lennie says I didn't do...?!?!

There were American "missionaries" trying to impose thier religion and moral values on people supposedly too poor to eat or even buy a Bible...(you see thier kids on "Feed The Children" commercials...

BUT...They always seemed to have money to buy AK47's and ammunition.

Go figure...

>>> Today there is no such need or competition.
>>
>> Just wait 5 years.
>>
>More like 20

The last years of the Soviet system were examples of what happens to a society wherein competion and individual initiative are stripped from people.

The Russians found out the hard way. The Chinese learned, but they also learned how to keep people repressed and doing what they want them to do.

>>That is
>>the take away I get from the SpaceShipOne effort. By comparison, the
>>Rutan effort is almost easy.
>
>I would not say "easy". And the SS1 effort has decades of experience and data

How many other massive spaceborne telescopes have we had on orbit?

These things also serve as testbeds. We tend to think of the space
program as being "old" since were in our 3rd generation with it. It's not.
It's still well within "infancy"

I think we are so confused between our fantasy perception of space travel
(ie: Star Trek et al, Babylon 5, etc) and the reality (barely crawling at this
point) that we have these grossly overinflated ideas of how these systems OUGHT
to "last" or "work".

>> Once upon a time, we built the thing. It was important enough to take
>>the risks and send it into space.
>
>Even though it was known that the optics were defective.

But they were able to compensate for that.

>
>Answer: Robots.

How does man learn to do these things in space if we send machines to try
and do it?

And how do we "teach" a machine to do something if we ourselves don't
already know how it should be done?

>More important, most car accidents are caused or exacerbated by human error.
>People not wearing seat belts, driving too fast, driving while impaired, etc.
>By comparison, the shuttle failures were caused by equipment troubles that
>the crew could do nothing about.

Oh?

They were engineering errors if we patently accept the investigation's
reports. The errors were due to a failure of the people making the decisons.

Thiokol said "go" after being coerced by NASA people to let Challenger
fly. Coerced by men...not robots.

Boom.

There had been issues raised over the foam on the external tank being able
to come loose, but again cooler heads didn't get a chance to prevail.

One "suggestion" that had been laid out years ago was that a "once-over"
EVA be done to the Shuttle prior to re-entry in order to make sure no external
damage was done.

It was suggested that thios would place the crew at too much risk.

The idea of a small "ROV" be built for the same purpose was made..

"Too much time and money".

I'll bet a bunch of MIT kids could have designed the thing as a class
project for less than a mil...Compare that against the loss we suffered.

>> Actually, I don't think there is a way to solve those problems.
>
>The ones on earth? I disagree!

Me too.

I was once told that there are not really any "problems"...Just solutions
awaiting implementation!

>I'm old enough to remember when the phrase "reaching for the moon" meant
>someone was trying to do that which could not be done. Yet it was done.

Yep. I believe we will one day find outr how to go light speed or better.
It's just a matter of time, money and effort.

>There was a time when it was seriously argued that some men had to be
>enslaved,
>either literally or economically, because nobody would voluntarily do those
>jobs. That problem was solved.

Yep..We just look the other way at the border once in a while! =)

>There was a time when it was seriously argued that women could not be allowed
>to vote because it would cause all kinds of problems. Turned out not to be a
>problem.

That's a matter of opinion.

Several political pundits have said that a lot of the "vote" that went to
Bill Clinton did so because some segment of women voters thought he was more
handsome than President Bush, and thought that his rhetoric on women's "issues"
was "sweet".

>There was a time when it was considered impossible to teach most children to
>read and write because their work was 'needed' in the farms, mills and
>factories.

Obviously it's still true.

A very large part of our imports from India and Pakistan are made by kids.

>> If we're not their, and it isn't humans there, maybe it's just time to
>>sit down and watch the history channel. We might see a story about us
>>there some day.
>>
>What's all the rush? Space has been there for a lot longer than we have, and
>will be there long after we are gone. We can take our time and do it in a
>planned way, or rush headlong and wastefully, and accomplish little.

Yes...it will still be there...but I for one am very disappointed that
after four decades of manned space travel, we still haven't done a darned thing
to REALLY start exploring "space"...!

39. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-02 09:02:35 UTC
From: n2ey@aol.comSPAMNO
Message-ID: <20040702050235.19470.00000388@mb-m22.aol.com>
Source record: 93715

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of June 30, 2004:

Novice - 31,422 (decrease of 17,907)
Technician - 265,199 (increase of 59,805)
Technician Plus - 58,889 (decrease of 69,971)
General - 140,237 (increase of 27,560)
Advanced - 79,928 (decrease of 19,854)
Extra - 105,635 (increase of 26,885)

Total Tech/TechPlus - 324,008

Total all classes - 681,310 (increase of 6,518)

An unusually high number of current licenses are due to expire in July.

73 de Jim, N2EY

Thnaks for the suggestion, Dee.

Yes, very good work, Carl. Thanks for posting. Perhaps we should all write to
UPLC.

One thing to remember, though: It makes a sort of twisted sense that the BPL
folks would simply 'stonewall', saying there is no harmful interference, their
systems are clean, Part 15 supports them, blah, blah, blah. If they start
admitting that yes, the interference is real, that power lines do radiate, that
the signals carry for many miles, etc., then they've set themselves up to be
shut down, or have their systems modified to the point of unusability.

Thanks again, Carl

Nope. It's about rewards.

The basic flaw in any collectivist system is that people are expected to work hard and take risks but are not rewarded for successfully doing so. The old saying

"From each according to his ability, to each according to his need"

is true but incomplete.

Here's the complete version:

"In a society where rewards are distributed by the rule 'From each according to his ability, to each according to his need', the end result will be very little ability and an enormous amount of need."
>
> The Russians found out the hard way. The Chinese learned, but they also

It is interesting to note that when many Chinese speak of "freedom" and "democracy", what those words mean to them are economic freedom and a free market system.

> The machines can't fix them selves enroute or on-site.

So you build more reliable machines. Learning how to do that is an earthbound
benefit of a space program!

Many human ills cannot be self-repaired, either.

Look at Cassini-Huygens - more than 7 years in space and performing perfectly.

One key to reliability is simplicity. A manned probe needs additional layers of
complexity because it has to include life support and systems to return home.
>
> I am willing to bet that the Brit's "Beagle 2" mission burnt up on

I'm not confused at all. Some folks, however, think that because humans went
from Kitty Hawk to supersonic flight in less than half a century, and from
there to the Sea of Tranquility in another quarter century, that such progres
would continue on a linear path. It doesn't.

Why should humans take unreasonable risks to do what can be done by machines?
>
> And how do we "teach" a machine to do something if we ourselves don't
>already know how it should be done?

It's done all the time. Look at the newest fly-by-wire military aircraft like
the joint services fighter. Its aerodynamically characteristics are such that a
human pilot cannot fly it directly - takes too many corrections in too little
time. But a computer can fly it directly.

The human pilot tells the computer what he/she wants the plane to do and the
computer figures out how to move the control surfaces to make that happen.
>

There's also the fact that a lot of flaws could not be fixed. If the Columbia crew had lnown there was a problem with foam damage, could they have fixed it?

> The idea of a small "ROV" be built for the same purpose was made..
>
> "Too much time and money".
>
> I'll bet a bunch of MIT kids could have designed the thing as a class
>project for less than a mil...

Designed, maybe. Built, tested and certified for manned space flight? No.

>Compare that against the loss we suffered.

Exactly. The humans made a wrong decision. Even though they were professionals, they messed up.

But part of the problem is the basic design of the STS itself. The people-carrying orbiter sits alongside the fuel tank and SRBs, not atop the rocket as was done in Apollo and its predecessors. There's no "escape tower", as was done in those earlier systems. And the reentry heat shield is exposed to the elements from long before the flight to the very end, where in previous systems (particularly Apollo) it was protected by other modules until reentry. (Of course there's a downside - once assembled to the SM, the Apollo CM heatshield could not be inspected.)
>
>>> Actually, I don't think there is a way to solve those problems.
>>
>>The ones on earth? I disagree!
>
> Me too.
>
>I was once told that there are not really any "problems"...Just
>solutions awaiting implementation!

Standard HR BS.

The facts are:

Some problems have no solution. ("What is the exact value of pi expressed as the ratio of two integers?).
Some problems have a theoretical solution but it cannot be found in practice (Traveling salesman problem)

Some problems have realizable solutions.

>>I'm old enough to remember when the phrase "reaching for the moon" meant
>>someone was trying to do that which could not be done. Yet it was done.
>
> Yep. I believe we will one day find outr how to go light speed or
>better.
> It's just a matter of time, money and effort.

No, it isn't.

At this point we do not know if such travel is possible.

It may be that there are as-yet-undiscovered principles of physics that would
make such travel possible.

It also may be that the very nature of the universe makes such travel by humans
completely impossible.

As it stands right now, our knowledge of physics says it cannot be done. Not a
matter of better rockets or materials - it's the very nature of the universe
that is the limit. Of course that knowledge could change! But at the present
time, human travel at or beyond the speed of light is *not* a matter of money
or effort; it's a matter of physical reality. Basic relativity physics, IOW.

And as Hans says so well:

"Reality does not care what you believe"
>
>>There was a time when it was seriously argued that some men had to be
>>enslaved,
>>either literally or economically, because nobody would voluntarily do those

>he was more
>handsome than President Bush, and thought that his rhetoric on women's
>"issues" was "sweet".

And who are these "pundits"?

What is their data?

Most of all, even if their claim is true, how is it any different from:

Men who won't vote for a black person?
Men who won't vote for a Roman Catholic? Or a Jew?
Men who won't vote for a person from a certain place or region?
Men who won't vote for someone because they "feel" he "cannot be trusted"?
>
>>There was a time when it was considered impossible to teach most children to

Personally I think he wasn't strong enough in his statements. The "vacuum tube" phrase should have been attacked with a selected sample of some of the technology firsts that the amateur community has accomplished. Perhaps even selected info on the fast response and assembly of stations at the WTC disaster.

However, his response was good in my opinion.

Well Dave, we could say "With all due respect, sirs, we don't want to insinuate that you might not be accurate, but we don't really think that your assessment is possibly not totally of the same opinion that we have. All apologies if we might be wrong, but we really think that, well we were kind of hoping that maybe you would....."

Yeah, Carl used Hogwash in his letter. I personally think he pulled his punch there anyhow. Hogwash is putting it quite politely.

The UPLC doc uses exaggeration, innuendo, gratuitous insults, and monumental inaccuracies. And while we are on the gratuitous line, it makes an equally monumental stretch in connecting BPL with Home security.

> The version he sent is inflammatory and
> combative. Then again, Carl is generally inflammatory and combative.
> At least he left out the "electronic paintball wars" stuff in his
> description of amateur radio.

I disagree with Carl on a number of issues, but on this one I believe he is spot on. We didn't start the volley of insults, UPLC did. The question of whether we want to be in this position is moot. We can either stand by and let them stomp on us, or we can take a more active stand.

YMMV

Even if a person is completely ignorant of how BPL works, wouldn't the average person get a little suspicious when we are told that it doesn't interfere, and then a few lines later, we are told of mitigation methods? If it doesn't interfere, there is no need for interference mitigation.

>mitigation.

"Mitigation" is four syllables, Mike, so right away you lost half the
population's ability to make any sense of it...

Few will notice or appreciate that disparity you point out, even though
it's a very valid one...Just like the folks who ignore the "Part 15" caveat on
thier "consumer electroics" devices at home who get "stepped on" by a licensed
transmitter ("those !@#$%^ hams"...regardless of what service is the culprit)
and then demand the FCC "do something" about "them".

UPLC will manage to loud-mouth thier plan into deployment...They will
forego any really adequate shielding, in OR out, and then the "consumer" will
be left barking about how badly it works.

Marlan Brando was a ham radio operator, and held the call FO5GJ. He owned an island somewhere in the Pacific where he spent a lot of time, thus the F05 call, I believe he held a U.S. call as well.
Some years ago I used to work a fellow on 15 metes, a Robert Savery - FO0RS, if I remember the call correctly. I worked him many times and the only thing he would tell me about his QTH is that it was an island that belonged to a very well known person from America who was a ham. He was the caretaker and took care of maintaing the ham station. I always suspicioned it may have been Brando's station.

There was nothing in his post that said anything of the sort. He never said anything about freebanders, he said freedom. In your effort to incite an arguement with or about twist, you have put down veterans that put everything on the line for your freedoms. If your looking for donations, why don't you ask for donations for a one way ticket for yourself to the middle east? I'm sure you would receive more donations that you would know what to do with. And I will be the first to contibute to that fund. Maybe the political system and lifestyle of the middle east is more to your liking, since you seem to have such a problem with the freedoms that we have in America.

>mitigation.

You would think so, but that's not how it works.

Take cell phones. How many "average people" really know the most basic things about how they work? I'm not talking about CDMA or even analog vs. digital, but just the idea that they are little radio transceivers? Look at the people opposing cell towers as "sources of radiation" - yet demanding perfect coverage, and holding the dern things next to their heads for many minutes per day. Note how the solutions that have evolved have included disguised sites, and the use of more cells with reduced coverage. "Inverse square law"? Puhleeze!

Why do you think the 'phone folks revived the term "wireless"?

>
>>Oddly enough, despite the urban myth of some objecting to BPL,
>> the FCC does NOT have any power to stop Access BPL!
>
>Actually, they do.

NO, they don't have ANY ability to STOP any Access BPL.

All the FCC can do - at the moment and in what they will probably have on a new R&O - is the ability to stop INCIDENTAL RF RADIATION beyond the level established by the Commission.

The broadband communications service over Access BPL can CONTINUE in the USA.

>> All the FCC can do is put limits on the incidental RF radiation
>> from a BPL system, then enforce it.
>
>It would be a simple matter for FCC to set the levels so low that none of the >systems could come close to meeting it. That would effectively ban it.
>
>But FCC won't do that. Yet.

FCC doesn't come even close to the German levels already established.

Even so, the FCC CANNOT STOP Access BPL. Do you understand your own error? Access BPL can, and already does, by rather obvious examples, ALREADY EXCEED REGULATORY STANDARDS on incidental RF radiation levels.

Read the NTIA Phase 1 and Phase 2 reports.

>> The FCC already does
>> that with other communications service providers (cable TV in
>> main but also telephone cable and incidental RF radiation from

>

>If it gets done. It probably won't. FCC is not bound by any strict deadlines
>for enforcement.

Well, what are you going to DO about it? Just sit there and send
messages on a broadband provider talking all about "CW getting
through when nothing else does?"

The incidental RF radiation from overhead electric power lines is
going to affect ANYONE trying to listen on HF and some low-VHF
frequencies.

>> There's no good signs evident that the FCC is coming even
>> close to realizing the gargantuan task of monitoring BPL of the
>> future. Mikey Powell and company have been sold on BPL "for
>> the masses" and that's that...a big mass.
>

Someone die and you were appointed New Headmaster?

Hell, yes, I would refer to FCC Chairman Powell as "Mikey" right
to his face...if I was commenting on the idiotic decisions to
abandon all existing radio services and government radio services
to the RF noise pollution of Access BPL.

I've ALREADY addressed the ENTIRE COMMISSION as ignorant
on technical matters. They are. QED. Quod erat demonstrandum.
[it is as demonstrated] That's in public view, on the record.

>> The only perceivable way to fight BPL is now after-the-fact, like
>> the Cedar Rapids group did, apparently successfully. But, that
>> takes a concerted group effort in each amateur radio locality.

>else, ARRL has continued to publicize the BPL threat both inside and outside
>the amateur community, and to spread accurate information on what is going on.

What is that statement you make...another Sermon on the Antenna
Mount?

The ARRL is NOT the major objector to Access BPL. You could see
that from the comments on dockets 04-37 or 03-104. But, you can't
see that and continue with the "praise the league" as if they were the
only group against BPL.

>The Iowa group and the affected amateur both publicly thanked ARRL for its
>help.

What "help" did the ARRL do in Cedar Rapids, Iowa?

Identify that "help."

The Cedar Rapids group WENT OUT AND DID IT BY THEMSELVES.

They TOOK ACTION.

They didn't go around mumbling catechisms for the league and do
nothing. THEY DID SOMETHING.

>> They
>> aren't staffed or budgeted to oversee all the possible BPL
>> installation testing in the USA. The League's budget would have
>> to quadruple or quintuple to approach being able to do that...and
>> still not be enough.
>
>How do you know what it would take, Len? Have you done it?
>Have you sent a check to help out?

Why are you trying to start a Flame War on this?

I CAN do a fair estimation of man-hours because I've done fair
estimations of man-hours and effort on lots of contract
proposals in the past.

Just what has the judgemental, finger-waving James Miccolis
DONE against Access BPL? Besides sit in here and wag a
disapproving finger and play space guru games in words with
Weiner von Brawn?!?

>> Individual industry and local government (state on down) groups
>> haven't shown they have enough clout to make a difference in the
>> Commission's enthusiasm for BPL.
>
>Regulation of radio is specifically a Federal function. State and local
>governments cannot have any real clout - otherwise they'd be requiring
>licenses and fees.

Clue: Access BPL is NOT a "radio service."

Access BPL has INCIDENTAL RF RADIATION that is "not intentioned
to transmit any radio frequency information."

Access BPL is a broadband communications carrier. As such it
might be - at some future time - under FCC control IF IT CROSSES
STATE BOUNDARIES in providing such a communication service.
[the telephone infrastructure already crosses state boundaries by
default since the communications capabilities are so built-in]

>> Pandora's Box has already
>> been opened. Lots of such Boxes in all of the 50 states. It's
>> going to be one helluva big task to close them.
>
>Maybe. Or maybe a few good precedents will be set that will cause the rest to
>give up.

Are you going to break into a rendition of "Tommorrow" from the
musical "Little Orphan Annie?"

IFF is the old acronym for radar transponders. IFF is also an
older contraction in English meaning I, and only IF. This isn't
the former nor the latter and your wish fulfillment hasn't yet been
filled. The EXISTING ACCESS BPL SYSTEM *ARE* RADIATING
EXCESS RF ENERGY ON HF in every community that is trying
it out.

"Maybies" don't cut it.

>Many highly-touted new technologies have fallen by the wayside once their
>disadvantages became known.

Yeah, like telephones, radio, heavier-than-air craft, television and
[ta-dahh] cellular telephony and the Internet!

Right. All "big disadvantaged things" that nobody "needs."

At time now, one in three Americans has a cell phone subscription
and one out of five American households have some form of Internet
access. According to the U.S. Census Bureau. But, what do they
know, right?

>There's also the economic angle. The price of DSL keeps dropping, as does
>Wi-Fi, while the areas covered by those technologies and cable keep expanding.
>If BPL cannot compete in price and performance, it's all over.

"Price of DSL keeps dropping?!?!?" Look again.

Who are the Wi-Fi (really Wi-FAX) providers? IEEE 802.16 standard
is hardly dry in its approved specifications for Wi-FAX and you are
thinking it is all over the USA?

You are avoiding the issues by trying to hide. Access BPL radiates
incidental RF radiation NOW in HF and some at low-VHF. By test.
By measurements of both government and private industry groups.

>> Say goodbye to low-level HF signals if BPL comes to your QTH,
>> at least for a while.
>
>Depends on the frequencies used. Not all BPL systems use the entire HF
>spectrum. See ARRL descriptions of the Penn Yan (NY) system.

NONE of the Access BPL systems use the "entire HF spectrum."
Only MOST of it. Enough to cream any low-level received signals
in pseudo-random noise.

Why are you trying to hide from the obvious RF pollution?

>> Remember which administration brought out
>> the spectre of Access BPL to this nation while you and everyone
>> else are at it.
>
>Not just this nation. The Canadians are at it:

BPL began in Norway 10 years ago, as PLC or Power Line
Communications. It didn't get far then.

The REPUBLICAN administration of NOW made broadband and
broadband over power lines a "big high-tech new thing" for rural
America. See MIKEY Powell's enthusiastic support in public.
See MIKEY Gallagher's enthusiastic support in public [NTIA].

Do you need pop-ups on your browser screen to understand
the toadying to the prez going on? Nationwide billboards (like
Wall Drug Store) to advertise it?

Or are you just trying to incite another newsgroup flame war?

>> Len
>
>The idiot keeps trying to engage me. Apparently he doesn't know what
>persona non grata >>>is<<<.

:-)

If it wasn't written up in QST it doesn't exist. QST over-emphasizes
the ham involvement of MARS and under-emphasizes the fact that
the U.S. Army started it in 1925 and now all three major military
service branches are involved in that Military Affiliate Radio System
as a self-standing radio system which MIGHT, but hardly ever does
for a fact, serve the long-existing regular military communications
facilities. [did QST every write up anything on the Grecial Firebolt
exercises? I don't think so but then I don't read enough ham-only
"technical" material]

Now, in this thread, there's much "learned" palaver on the wrongs
and wrongs of U.S. spaceflight efforts between the two participants
who haven't gotten much beyond the Popular Science write-ups.
The Cassini-Huygens probes are considered another outstanding
success but the critics are highly critical. [maybe because ham
radio isn't essential to such efforts?]

Meanwhile, BPL is the spectre on the ham horizon but nobody
seems very concerned. Either they can't think beyond their
personal fantasies or they think that "CW will get through?"
Some folks in here are so into the personal attack mode that
all they can do is carp and bark and toss snit at Cart Stevenson
for a mild rebuke against UPLC, a group that was arrogantly
snitting on amateur radio.

>day. Note how the solutions that have evolved have included disguised sites,
>and the use of more cells with reduced coverage. "Inverse square law"?
>Puhleeze!
>
>Why do you think the 'phone folks revived the term "wireless"?

Because the "'phone folks" did NOT "revive" it.

The term "wireless" of modern use came from the LAN people, those who design and make Local Area Networks. The first LANs were WIRED. Wiring can be expensive and cumbersome in most areas so the LAN folks brought in low-power RF linking, or "wireless LANs." That was popular and grew.

"Wireless" as the word is used now is almost anything not needing wires to connect audio, video, or data over short distances.

An automobile was once referred to as a "horseless buggy." That kind of description hasn't been in use much in either today's society nor even that of my childhood. For the same reason, modern society does NOT think of "wireless' as anything like the old 1920s term of radio.

If the "'phone folks" called cellular anything, it was "mobile." It still is and many industry folks refer to it as "mobile," synonymous with "cell" and "cellular."

[count on another argument and ignitor of potential flame wars concerning the above...some folks don't stop at mere facts in here when it comes to wanting to fight...:-)]

| UPLC will manage to loud-mouth thier plan into deployment...They
| will forego any really adequate shielding, in OR out, and then the
| "consumer" will be left barking about how badly it works.

What possible sort of shielding could there be?

Well, you could put a shield around each wire. In fact, they have a word for that sort of thing -- coax. Or you could move the wires closer together -- that wouldn't shield anything, but it would decrease the radiation. Or twist the cables together like twisted pair -- but that would require some sort of insulation on the wire.

All of these methods are many many many times more expensive than just running coax or fiber alongside the power line and using that for data.

Or is there some sort of magic, yet cheap, shielding that they could do that I'm just not aware of?

> anyway? Ex-Army radio clerks ?

The problem isn't regression, the problem is that there are parts on
the engine that simply aren't made any more. One small example is that
when I was on tour down at the cape, we could look inside one of the
monsters. I don't even know if lacing cable is made any more. That's
just one thing, There are a lot of other parts that just aren't made any
more. So while we could in principle make the things again, and the
engineering drawings exist, it just ain't that simple.

More the pity. The Saturn's were beautiful, muscular brutes, all the
more impressive that they were made around 40 years ago. We haven't
matched them yet.

Quick Q. THe fuel and oxidizer combo on the Saturns was a bit different
from the typical. What was it?

So exactly how do we cure hunger, disease, poverty, and the fact that
there is a significant number of people that don't think any of the
above are a problem?

>>> the FCC does NOT have any power to stop Access BPL!
>>
>>Actually, they do.
>
> NO, they don't have ANY ability to STOP any Access BPL.

Yes, they do. FCC has the authority to shut down a source of interference.
>
> All the FCC can do - at the moment and in what they will probably
> have on a new R&O - is the ability to stop INCIDENTAL RF
> RADIATION beyond the level established by the Commission.

Or if it causes harmful interference.
>
> The broadband communications service over Access BPL can
> CONTINUE in the USA.
>
Only with FCC approval. FCC also regulates communications by "wire" as well as
radio. That's why a "56K" modem can't go quite that fast.

>>> All the FCC can do is put limits on the incidental RF radiation
>>> from a BPL system, then enforce it.
>>
>>It would be a simple matter for FCC to set the levels so low that none of
>>the
>>systems could come close to meeting it. That would effectively ban it.
>>
>>But FCC won't do that. Yet.
>
> FCC doesn't come even close to the German levels already
> established.

Not yet. But, if FCC were of a mind to, they could set Part 15 levels even
lower than the German levels. Or rule that BPL systems require certification
before entering operation.

> Even so, the FCC CANNOT STOP Access BPL. Do you under-
> stand your own error?

There's no error. FCC has the authority - if they chose to use it. They
haven't.

> Access BPL can, and already does, by
> rather obvious examples, ALREADY EXCEED REGULATORY
> STANDARDS on incidental RF radiation levels.
>
There's no reason to shout, Len.

> Read the NTIA Phase 1 and Phase 2 reports.

Why?
>
>>> The FCC already does
>>> that with other communications service providers (cable TV in
>>> main but also telephone cable and incidental RF radiation from
>>> electric power lines). The enforcement is going to be a total
>>> bitch of a job for BPL. The FCC is way, way down on facilities
>>> to test and measure BPL installations and is going to have to
>>> really pork up its budget to come close to good measurements
>>> in urban areas especially. It will be a HUGE task.
>>
>>If it gets done. It probably won't. FCC is not bound by any strict deadlines
>>for enforcement.
>
> Well, what are you going to DO about it?

What can a mere amateur like me do about it? The professionals keep saying BPL
is a good thing, needed for homeland security, creates jobs, etc. I filed
comments on the NOI but it apparently made no difference. Both the FCC Chairman
and Our President say we need BPL. Our President has left it up to NTIA to
solve any interference issues.

What counterarguments can I offer that will change all their minds? Besides -
you keepo telling me that FCC can't stop BPL anyway.

> Just sit there and send
> messages on a broadband provider talking all about "CW getting
> through when nothing else does?"

I've never said that, Len.

And all I have is a dialup connection.
>
> The incidental RF radiation from overhead electric power lines is
> going to affect ANYONE trying to listen on HF and some low-VHF
> frequencies.

Have you actually heard any of it?

And why are you so concerned? You're not a radio amateur.
>

>>> There's no good signs evident that the FCC is coming even
>>> close to realizing the gargantuan task of monitoring BPL of the
>>> future. Mikey Powell and company have been sold on BPL "for
>>> the masses" and that's that...a big mass.
>>

> proposals in the past.

How long ago was that? Did it involve HF interference elimination?
>
> Just what has the judgemental, finger-waving James Miccolis
> DONE against Access BPL?

I'm not making any judgements nor waving any fingers, Len. I'm just asking questions.

And I have done a few things. Probably more than you.

> Besides sit in here and wag a
> disapproving finger and play space guru games in words with
> Weiner von Brawn?!?

What *are* you talking about, Len?

>>> Individual industry and local government (state on down) groups
>>> haven't shown they have enough clout to make a difference in the
>>> Commission's enthusiasm for BPL.
>>
>>Regulation of radio is specifically a Federal function. State and local
>>governments cannot have any real clout - otherwise they'd be requiring
>>licenses and fees.
>
> Clue: Access BPL is NOT a "radio service."

Doesn't matter. If something interferes with licensed radio services, FCC has regulatory power.
>
> Access BPL has INCIDENTAL RF RADIATION that is "not intentioned
> to transmit any radio frequency information."
>
> Access BPL is a broadband communications carrier. As such it
> might be - at some future time - under FCC control IF IT CROSSES
> STATE BOUNDARIES in providing such a communication service.
> [the telephone infrastructure already crosses state boundaries by
> default since the communications capabilities are so built-in]

Nope. Doesn't work that way.

Because the internet information can cross state boundaries, FCC has authority.

>>> Pandora's Box has already
>>> been opened. Lots of such Boxes in all of the 50 states. It's
>>> going to be one helluva big task to close them.
>>
>>Maybe. Or maybe a few good precedents will be set that will cause the rest

>>disadvantages became known.
>
> Yeah, like telephones, radio, heavier-than-air craft, television and
> [ta-dahh] cellular telephony and the Internet!
>
> Right. All "big disadvantaged things" that nobody "needs."

Beta VCRs, the Iridium system, "quadraphonic" sound, 8 track tapes, old-format
laser discs....

Heck, technology changes so fast these days that the IRS considers a computer
fully depreciated in just 3 years.
>
> At time now, one in three Americans has a cell phone subscription
> and one out of five American households have some form of Internet
> access. According to the U.S. Census Bureau. But, what do they
> know, right?

What is the significance of those facts, Len? Neither has anything to do with
BPL or amateur radio.
>
>>There's also the economic angle. The price of DSL keeps dropping, as does
>>Wi-Fi, while the areas covered by those technologies and cable keep
>>expanding.
>>If BPL cannot compete in price and performance, it's all over.
>
> "Price of DSL keeps dropping?!?!?" Look again.

I did. My local providers have reduced the price of DSL repeatedly. It's
getting so that I'm seriously considering changing to DSL as part of a bundled
package of cell, POTS and internet access.
>
> Who are the Wi-Fi (really Wi-FAX) providers? IEEE 802.16 standard
> is hardly dry in its approved specifications for Wi-FAX and you are
> thinking it is all over the USA?

Not at all. But it's in many locations and growing fast. No interference problems like BPL. Complete portability. But hey, what do I know? Ask WK3C, Carl Stevenson. He's much more knowledgeable about that stuff than I.

> You are avoiding the issues by trying to hide.

Not at all, Len. I'm right here.

> Access BPL radiates
> incidental RF radiation NOW in HF and some at low-VHF. By test.
> By measurements of both government and private industry groups.

Interesting that you don't mention ARRL's measurements and observations. Did you see the videos?

>>> Say goodbye to low-level HF signals if BPL comes to your QTH,
>>> at least for a while.
>>
>>Depends on the frequencies used. Not all BPL systems use the entire HF
>>spectrum. See ARRL descriptions of the Penn Yan (NY) system.
>
> NONE of the Access BPL systems use the "entire HF spectrum."
> Only MOST of it. Enough to cream any low-level received signals
> in pseudo-random noise.

Why does that bother you, Len?
>
> Why are you trying to hide from the obvious RF pollution?

I'm not hiding from anything.

>>> Remember which administration brought out
>>> the spectre of Access BPL to this nation while you and everyone
>>> else are at it.
>>
>>Not just this nation. The Canadians are at it:
>
> BPL began in Norway 10 years ago, as PLC or Power Line
> Communications. It didn't get far then.

Must have interfered with lutefisk production.
>
> The REPUBLICAN administration of NOW made broadband and
> broadband over power lines a "big high-tech new thing" for rural
> America.

Yep - even though none of the test sites are truly rural.

Note that the Republican administration of Ronald Reagan gave is VEC testing and 10 year amateur licenses.

The Republican administration of George Bush (the elder) gave us medical waivers for code tests, the no-code-test Technician license, and set in motion the end of the maritime Morse requirements.

The Republican administration of "now" supported the revision of treaty part S25.5 to eliminate the requirement for Morse code testing, thereby clearing the path for the elimination of all code testing in the USA.

I recall someone here saying the FCC was the "expert agency" composed of "professional regulators" who had looked at the arguments and "made the right choice". Or words to that effect, anyway.

Now you tell me the FCC doesn't knwo what they're doing?

> See MIKEY Powell's enthusiastic support in public.
> See MIKEY Gallagher's enthusiastic support in public [NTIA].

I don't think you'd talk to them that way in person.

> Do you need pop-ups on your browser screen to understand
> the toadying to the prez going on? Nationwide billboards (like
> Wall Drug Store) to advertise it?

Not at all.

> Or are you just trying to incite another newsgroup flame war?

Not me. I'm not the one yelling and screaming and calling people names.

Not as much as some may think. The engines work, the ship works, if in
need of some design mods. A good deal more "oomph" is needed to get
something into orbit, as well as a likely ship redesign. But it'll happen.

But the humans can see something askew that teh computer may not. I
suspect that a human on board that one doomed Mars lander might have
seen that one set of instructions was in metric, and the other was not.
I work with computers every day. They really aren't that smart. They
will execute disastarous commands at accuracies far to several
insignificant digits

Boring....

It's related to whay I still play ice hockey at 50 years old, while
most of the people I know think I'm nuts for doing it.

Too many people are so afraid of dying that their lives are diminished
by the effort to stay safe. They refuse to take risks. "It's too
dangerous", "I have to buy a 6000 pound SUV because if I run into
someone, *I'll win*" Aren't you afraid of breaking something?" It's too
dangeraous to send people to space". It's too dangerous to do anything".
"Yada Yada Yada."

Pat Pending has nothing for him. He's no mover or shaker of the amateur world. He's advanced no state of the art. He's only good at misstating the art.

He does expect everyone else to move and shake when he starts the "Yell Yell Marine" routine. I'm not buying it.

> http://tinyurl.com/yqxbh

This (the link) is the most offensive thing I have ever seen towards ham radio in my 34 years as a ham. Thank to Chris for printing the URL.

To me, it equates to someone standing on the ruins of the WTC on Sept 12th, and flipping the bird to ham radio.

Sept 12th is important because by then, ham operators had already put in 24 hours of non-stop, volunteer, world-class operation.

Anyone who says differently about ham radio, GFY.

>> The broadband communications service over Access BPL can
>> CONTINUE in the USA.
>>
>Only with FCC approval. FCC also regulates communications by "wire" as well as
>radio. That's why a "56K" modem can't go quite that fast.

Nope. No "FCC approval" required as long as Access BPL doesn't
have incidental RF radiation beyond Commission regulations.

You best reread the Telecommunications Act of 1996.

>>>> All the FCC can do is put limits on the incidental RF radiation
>>>> from a BPL system, then enforce it.
>>>
>>>It would be a simple matter for FCC to set the levels so low that none of
the

>>>systems could come close to meeting it. That would effectively ban it.
>>>
>>>But FCC won't do that. Yet.
>>
>> FCC doesn't come even close to the German levels already
>> established.
>
>Not yet. But, if FCC were of a mind to, they could set Part 15 levels even
>lower than the German levels. Or rule that BPL systems require certification
>before entering operation.

Not with MIKEY Powerll as Chief Commissioner or MIKEY Gallagher as
the NTIA acting secretary. Two toadies for the prez for the price of one!

>> Even so, the FCC CANNOT STOP Access BPL. Do you under-
>> stand your own error?
>
>There's no error. FCC has the authority - if they chose to use it. They
>haven't.

As long as an Access BPL provider doesn't radiate incidental RF beyond
Commission regulations, the FCC CANNOT DO ANYTHING ABOUT IT.

You still don't understand just who approves or disapproves a provider.

>> Access BPL can, and already does, by
>> rather obvious examples, ALREADY EXCEED REGULATORY
>> STANDARDS on incidental RF radiation levels.
>>
>There's no reason to shout, Len.

"Shout?" Your eyes are too sensitive to opposition. Turn down your
display brightness or wear shades.

[wear shades and no one will recognize you in here? hi, hi. :-)]

>> Read the NTIA Phase 1 and Phase 2 reports.
>
>Why?

To LEARN something.

>>>> The FCC already does
>>>> that with other communications service providers (cable TV in
>>>> main but also telephone cable and incidental RF radiation from
>>>> electric power lines). The enforcement is going to be a total

>>>> to test and measure BPL installations and is going to have to
>>>> really pork up its budget to come close to good measurements
>>>> in urban areas especially. It will be a HUGE task.
>>>
>>>If it gets done. It probably won't. FCC is not bound by any strict deadlines
>>>for enforcement.

>>
>> Well, what are you going to DO about it?
>
>What can a mere amateur like me do about it? The professionals keep saying BPL
>is a good thing, needed for homeland security, creates jobs, etc. I filed
>comments on the NOI but it apparently made no difference. Both the FCC
>Chairman and Our President say we need BPL. Our President has left it up to
NTIA to
>solve any interference issues.

Then why are you blaming others who HAVE DONE SOMETHING because
you feel inadequate? That's irrational.

>What counterarguments can I offer that will change all their minds? Besides -
>you keepo telling me that FCC can't stop BPL anyway.

I don't "keepo" anything. :-)

Get creative. Don't sit around like a self-made guru and font of knowledge
without any spritzer. We can't help your feelings of inadequacy...

>> Just sit there and send
>> messages on a broadband provider talking all about "CW getting
>> through when nothing else does?"
>
>I've never said that, Len.

No? Not even once? :-)

>And all I have is a dialup connection.

Now, now...you've said many, many times you "know' what FCC will do!

You pretend to be an "insider" with all that "knowledge." :-)

>> The incidental RF radiation from overhead electric power lines is
>> going to affect ANYONE trying to listen on HF and some low-VHF
>> frequencies.
>
>Have you actually heard any of it?

Only recordings. I HAVE heard plenty of random garbage from HV
corona, neon signs, arc welders, low-power RF bulbs now all the
sales rage in do-it-yourself stores to "cut down on electricity
consumption."

>And why are you so concerned? You're not a radio amateur.

I am a radio professional. Professionals GET concerned.

>>>> There's no good signs evident that the FCC is coming even
>>>> close to realizing the gargantuan task of monitoring BPL of the
>>>> future. Mikey Powell and company have been sold on BPL "for
>>>> the masses" and that's that...a big mass.
>>>

>>>Would you refer to Chairman Powell as "Mikey" to his face? Would you address
>>>your comments to FCC to "Mikey"?
>>
>> Someone die and you were appointed New Headmaster?
>
>No. Did someone appoint you to that position?

Never claimed to. :-) YOU are the one trying to ask leading questions.

>> Hell, yes, I would refer to FCC Chairman Powell as "Mikey" right
>> to his face...if I was commenting on the idiotic decisions to
>> abandon all existing radio services and government radio services
>> to the RF noise pollution of Access BPL.
>
>Do you think it would help?

It would help ME. :-)

It wouldn't be done unless BPL was a fait accompli. I think it is.

>> I've ALREADY addressed the ENTIRE COMMISSION as ignorant
>> on technical matters. They are. QED. Quod erat demonstrandum.
>> [it is as demonstrated] That's in public view, on the record.
>
>I must have missed that in your comments. Did it help stop BPL?

My telling the truth in here hasn't stopped you one bit. :-)

I take it you aren't concerned about Access BPL? You feel NO
danger of it polluting HF in the near future?

You should. All radio amateurs should. Now if you've READ the NTIA
reports, READ the reports of the Cedar Rapids group on measured RF
interference, you SHOULD be concerned. Be very concerned!

But, no, your only "concern" is trying to have weak verbal fisticuffs in
here, trying to "assert" yourself by talking down to others... Tsk.

>>>> The only perceivable way to fight BPL is now after-the-fact, like
>>>> the Cedar Rapids group did, apparently successfully. But, that
>>>> takes a concerted group effort in each amateur radio locality.
>>>> ARRL can't be dependent as the "big gun" to fight BPL.
>>>
>>>But they *can* give needed help, and act to coordinate efforts. And if
>>>nothing
>>>else, ARRL has continued to publicize the BPL threat both inside and
>outside
>>>the amateur community, and to spread accurate information on what is going
>>>on.
>>
>> What is that statement you make...another Sermon on the Antenna
>> Mount?
>

>Just some simple facts, Len. Would you rather that ARRL not be involved?

The FIRST league "reports" were only computer simulations. It took some
months before they could hire a professional instrumentation service to get
first-hand data on the REAL RF radiation.

Money for the ARRL hired service came out of the league's budget. There
was NO money reported spent by the Cedar Rapids amateur group.

>> The ARRL is NOT the major objector to Access BPL.
>
>Neither are you.

Childish response. Tsk.

Why are you objecting by doing such childish commentary?

The only rational answer is that you really don't know much about BPL
and/or want it to come in to everyone's urban residences....and radios.

>> You could see
>> that from the comments on dockets 04-37 or 03-104. But, you can't
>> see that and continue with the "praise the league" as if they were the
>> only group against BPL.
>
>I think it really bothers you that ARRL is playing any role at all in it. You
>ever meet Ed Hare, W1RFI, or see his presentation?

Doesn't bother me at all. :-)

It DOES bother the heck out of you, though, because you bristle and
get most hostile at the slightest negativism of your beloved leadue!

>>>The Iowa group and the affected amateur both publicly thanked ARRL for its
>>>help.
>>
>> What "help" did the ARRL do in Cedar Rapids, Iowa?
>
>I don't know. But both the Iowa group and the affected amateur thanked them.

See? One little harmless NON-praise of ARRL and you get hostile. Tsk.

>> Identify that "help."
>>
>Why?

So everyone one know what the Great ARRL can do! :-)

>Do you think they would have thanked ARRL for no help?

I don't know what "they think." Telepathy not an attribute here.

But, you try with the leading, hostile question again! :-)

>> The Cedar Rapids group WENT OUT AND DID IT BY THEMSELVES.
>

>How do you know? Were you there? Did you help them?

I read their reports. Plural. Several Comments. Detailed data on their measurements, procedures, instrument descriptions, photos, drawings. Good stuff! Shows they know what they were doing.

>Why would they thank ARRL if they "WENT OUT AND DID IT BY THEMSELVES."
>>
>> They TOOK ACTION.
>
>Nobody denies that.

How do you know? Were you there? Did you help them?

:-)

>> They didn't go around mumbling catechisms for the league and do
>> nothing. THEY DID SOMETHING.
>
>They experienced demonstrable interference from BPL.
>
>What do you suggest others do?

Why do you need ACTION spelled out? It's OBVIOUS.

Obvious to all but those self-elect guru extras who sit in here and try to pick fights with others because they sound warnings and wave flags.

:-)

>>
>>>> They
>>>> aren't staffed or budgeted to oversee all the possible BPL
>>>> installation testing in the USA. The League's budget would have
>>>> to quadruple or quintuple to approach being able to do that...and
>>>> still not be enough.
>>>
>>>How do you know what it would take, Len? Have you done it?
>>>Have you sent a check to help out?
>>
>> Why are you trying to start a Flame War on this?
>
>I'm not. I'm simply asking some questions. You haven't provided answers.

No, you are NOT "simply asking some questions." :-)

You are deliberately asking leading questions with hostile intent.

You just want to ARGUE...then try to wear others down in sheer length of "replies." :-)

>> I CAN do a fair estimation of man-hours because I've done fair
>> estimations of man-hours and effort on lots of contract
>> proposals in the past.

>
>How long ago was that? Did it involve HF interference elimination?

A year and a half ago. Yes, it did.

Sunnuvagun!!! :-)

>> Just what has the judgemental, finger-waving James Miccolis
>> DONE against Access BPL?
>
>I'm not making any judgements nor waving any fingers, Len. I'm just asking
>questions.

Nope. You are provoking arguments for the sake of your love of
arguments. :-)

>And I have done a few things. Probably more than you.

How do you KNOW? Were you THERE? Did you help?

>> Besides sit in here and wag a
>> disapproving finger and play space guru games in words with
>> Weiner von Brawn?!?
>
>What *are* you talking about, Len?

Tsk. All those many words and "answers" on aerospace and you
pretend "not understanding?!?" Tsk.

Describe to us your professional experience in aerospace. Give us a
baseline of your judgement on space matters through actual space
work performed.

>>>> Individual industry and local government (state on down) groups
>>>> haven't shown they have enough clout to make a difference in the
>>>> Commission's enthusiasm for BPL.
>>>
>>>Regulation of radio is specifically a Federal function. State and local
>>>governments cannot have any real clout - otherwise they'd be requiring
>>>licenses and fees.
>>
>> Clue: Access BPL is NOT a "radio service."
>
>Doesn't matter. If something interferes with licensed radio services, FCC has
>regulatory power.

But only to removal of the interfering source.

So far, all the FCC has done about ordinary, pre-BPL electric power line
RF interference has been a lot of letters. Of paper. Incomplete
"regulation."

ARINC reported it still has RF interference to one of its HF receiving
sites.

That's in their Comments. FCC hasn't exercised any "regulatory power"
on clearing that up yet.

>> Access BPL has INCIDENTAL RF RADIATION that is "not intentioned
>> to transmit any radio frequency information."
>>
>> Access BPL is a broadband communications carrier. As such it
>> might be - at some future time - under FCC control IF IT CROSSES
>> STATE BOUNDARIES in providing such a communication service.
>> [the telephone infrastructure already crosses state boundaries by
>> default since the communications capabilities are so built-in]
>
>Nope. Doesn't work that way.
>
>Because the internet information can cross state boundaries, FCC has
>authority.

Tsk, tsk. Best you go read that Telecommunications Act of 1996...

You may have been admitted to a bar, but you haven't been admitted to
a Bar Association.

>>>> Pandora's Box has already
>>>> been opened. Lots of such Boxes in all of the 50 states. It's
>>>> going to be one helluva big task to close them.
>>>
>>>Maybe. Or maybe a few good precedents will be set that will cause the rest
>>>to give up.
>>
>> Are you going to break into a rendition of "Tommorrow" from the
>> musical "Little Orphan Annie?"
>
>Nope. Are you?

Tsk. Jimmie can't take the slightest negativism. :-)

>> IFF is the old acronym for radar transponders.
>
>Like the APX-6. Converted by hams for use on 1296 MHz.

To borrow something from Weiner von Brawn, your buddy in space -

BWAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!

Jimmie, don't bother with WW2 surplus. Get with present-day
transponders. Radar transponders. "Mode 4." What a "KIR" and
"KIT" are. [military] What's an "ATCRBS?" Why the three pulses in
transponders with the middle one at varying levels? Why use two
pulses? Go get some REAL transponder info, stuff that is used NOW,
not before you were born.

Try Teledyne Electronics, Newbury Park, CA. My employer for a while.
Made nothing but military radar transponders there. Tsk.

>> IFF is also an
>> older contraction in English meaning I, and only IF.
>
>Actually, it's an acronym. Sort of.

CONTRACTION. Don't try to give birth to something new...

>> This isn't
>> the former nor the latter and your wish fulfillment hasn't yet been
>> filled.
>
>Yes, it is.

Jimmie dropped into "nyah-nyah mode" again. He needs to trim up
his coincidence detector, he be triggering on "fruit." :-)

>> The EXISTING ACCESS BPL SYSTEM *ARE* RADIATING
>> EXCESS RF ENERGY ON HF in every community that is trying
>> it out.
>
>I could have told you that a year ago, Len. What's with all the shouting?

Tsk. "You could have told a year ago!" Well, why didn't you?

How about two years ago? Three? Ten? Did you keep informed on
the Norwegian-Swedish PLC trials? The potential was THERE. Did
you keep informed on the following European PLC trials? In the UK?

I doubt it. You are as informed on Access BPL as you pretend to be
about the aerospace business.

>> "Maybies" don't cut it.
>>
>>>Many highly-touted new technologies have fallen by the wayside once their
>>>disadvantages became known.
>>

>
>Heck, technology changes so fast these days that the IRS considers a computer
>fully depreciated in just 3 years.

Tsk, tsk, tsk. I could have told you that in 1974 after the IRS audited
my tax return for 1973 on my HP-35 scientific calculator. 3-year-
depreciation. Nothing new. :-)

>> At time now, one in three Americans has a cell phone subscription
>> and one out of five American households have some form of Internet
>> access. According to the U.S. Census Bureau. But, what do they
>> know, right?
>
>What is the significance of those facts, Len? Neither has anything to do with
>BPL or amateur radio.

What is the significance of your mighty verbose output on AEROSPACE
and national economy and the presidential elections in an amateur radio
policy newsgroup?

Don't act childish or churlish with those attempts at leading questions.
Google has it all archived.

BPL *will* hit all amateurs, all SWLs, all CBers, all other radio services
using HF right in the antenna port if they try to receive close to a BPL
line. The test sites have already been measured to do that.

>>>There's also the economic angle. The price of DSL keeps dropping, as does
>>>Wi-Fi, while the areas covered by those technologies and cable keep
>>>expanding.
>>>If BPL cannot compete in price and performance, it's all over.
>>

>
>I did. My local providers have reduced the price of DSL repeatedly. It's
>getting so that I'm seriously considering changing to DSL as part of a
>bundled package of cell, POTS and internet access.

But, "what has that to do with BPL or amateur radio?"

>> Who are the Wi-Fi (really Wi-FAX) providers? IEEE 802.16 standard
>> is hardly dry in its approved specifications for Wi-FAX and you are
>> thinking it is all over the USA?
>
>Not at all. But it's in many locations and growing fast. No interference
>problems like BPL. Complete portability. But hey, what do I know? Ask WK3C,
>Carl Stevenson. He's much more knowledgeable about that stuff than I.

Tsk. I thought, indeed many thought, you knew MORE than anyone.

Carl is an IEEE member. So am I. So what. WE can both access
information on IEEE standards...as you can, if you try. You are NOT
an IEEE member despite being a professional.

But, "what has that to do with BPL or amateur radio?" :-)

IEEE isn't advocating for BPL. Just the opposite.

You want to oppose the IEEE's objections because your poor little
newsgroup pride is "hurt?" Awwww....

>> You are avoiding the issues by trying to hide.
>

>Not at all, Len. I'm right here.

But, "what has that to do with BPL or amateur radio?"

>> Access BPL radiates
>> incidental RF radiation NOW in HF and some at low-VHF. By test.
>> By measurements of both government and private industry groups.
>
>Interesting that you don't mention ARRL's measurements and observations. Did
>you see the videos?

Did you see over a thousand comments on docket 04-37?

Did you see the full Cedar Rapids amateur group comment and
report on their Cedar Rapids BPL interference measurements/

I don't think so. All you want to do is "praise the league and pass
all the mighty notion." :-)

>>>> Say goodbye to low-level HF signals if BPL comes to your QTH,
>>>> at least for a while.
>>>
>>>Depends on the frequencies used. Not all BPL systems use the entire HF
>>>spectrum. See ARRL descriptions of the Penn Yan (NY) system.
>>
>> NONE of the Access BPL systems use the "entire HF spectrum."
>> Only MOST of it. Enough to cream any low-level received signals
>> in pseudo-random noise.
>
>Why does that bother you, Len?

Why are you so antagonistic at anyone pointing out flaws with the
ARRL?

Do you want to spend your BPL objection time watching league
videos and play-acting at being an RFI guru?

>> Why are you trying to hide from the obvious RF pollution?
>
>I'm not hiding from anything.

Sure you are. You'd rather be in here ARGUING for the sake of
arguing and trying to wear others down with your lengthy posts. :-)

>>>
>>>Not just this nation. The Canadians are at it:
>>
>> BPL began in Norway 10 years ago, as PLC or Power Line
>> Communications. It didn't get far then.
>
>Must have interfered with lutefisk production.

Tsk, tsk, tsk. Ethnic slurs and insults? From the double-degreed
ivy-trimmed wonder of the amateur world?

No. There was no reported "interference" with whitefish treatments.

Both Norway and Sweden trials showed considerable SWL
interference. In case you wondered, Europe actually uses SW BC
for listening. [not for treating fish with lye]

>> The REPUBLICAN administration of NOW made broadband and
>> broadband over power lines a "big high-tech new thing" for rural
>> America.
>
>Yep - even though none of the test sites are truly rural.
>
>Note that the Republican administration of Ronald Reagan gave is VEC testing
>and 10 year amateur licenses.

What has that to do with a BPL Pilot Project in Cedar Rapids in
2003-2004?

Answer: Not a thing.

>The Republican administration of George Bush (the elder) gave us medical
>waivers for code tests, the no-code-test Technician license, and set in
>motion the end of the maritime Morse requirements.

Poor baby. More with misdirection into presidential and party politics.

Tsk, tsk, tsk. The Maritime World was already dropping manual
telegraphy by 1990 and had begun earlier than that.

The BPL test in Cedar Rapids doesn't have a thing to do with "medical
waivers," "code tests," or Technician class licenses, or "setting much
in motion" except showing that BPL is BAD for HF.

>The Republican administration of "now" supported the revision of treaty part
>S25.5 to eliminate the requirement for Morse code testing, thereby clearing
the
>path for the elimination of all code testing in the USA.
>
>I recall someone here saying the FCC was the "expert agency" composed of
>"professional regulators" who had looked at the arguments and "made the right
>choice". Or words to that effect, anyway.
>
>Now you tell me the FCC doesn't knwo what they're doing?

Jimmie lose his "professional" job? He only an "amateur?" Tsk.

Why Jimmie so against "professionals?" Jimmie not get enough
salary?

>> See MIKEY Powell's enthusiastic support in public.
>> See MIKEY Gallagher's enthusiastic support in public [NTIA].
>

>I don't think you'd talk to them that way in person.

I KNOW I would, Jimmie. No problem to me.

YOU do NOT know what I do, can do, have done...you won't listen
or acknowledge. Tsk.

>> Do you need pop-ups on your browser screen to understand
>> the toadying to the prez going on? Nationwide billboards (like
>> Wall Drug Store) to advertise it?
>
>Not at all.

Poor baby. Can't understand that BPL is going to be an RF
polluter of HF and low-VHF frequencies. Wants to argue for the
sake of argument. Tsk.

>> Or are you just trying to incite another newsgroup flame war?
>
>Not me. I'm not the one yelling and screaming and calling people names.

They you go and chastise Steve Robeson. HE yells and screams and
curses and calls other people names. He is an amateur. Another
"extra."

Police your own, chief.

The question is - what will be effective? For example, the "vaduum tube transmitter" comment could be countered by "you folks still use wooden poles with porcelain insulators on them". But will such behavior help or hurt?

Perhaps that's what UPLC wants - to get into a shouting match with name calling and all the rest.

While it was satisfying to see Carl's response, after some thought I begin to wonder how effective "replying in kind" would be.

>permission or not.

Yep.

The problem of getting a site varies all over the place. In some areas all you
need do is ask. In others there's all sorts of paperwork. A club with active
ARES folks obvioulsy has an edge over one that doesn't, but even that
connection is no guarantee.

There's also the very real factor of do you go for visibility, convenience or
radio performance in a site? (Rare are the sites that combine all three).

Yes, that does happen.

However, FD can be done at any level, from a one-person show to massive
multi-multi operation with dozens of transmitters on the air and hundreds of
people involved. The appropriately-callsigned N1FD operation is one example of
the latter.

Last year I did a low-intensity solo effort - 1B-1 battery. Still made over
2400 points.

Which may ultimately prove their undoing.

Let's do a little survey: What options are available where you live, and at what price?

Here in Radnor, besides dialup, I can choose cable access at $42.95/month, or DSL access at as low as $29.95/month. No BPL, thankfully.

How about others?

>It's done all the time. Look at the newest fly-by-wire military aircraft like
>the joint services fighter. Its aerodynamically characteristics are such that
>a
>human pilot cannot fly it directly - takes too many corrections in too little
>time. But a computer can fly it directly.

Uh huh.

And how does the computer "know" what's an "unusual attitude" and correct
it?

How does the computer know the difference between that same "unusual
attitude" as a result of loss-of-control (needs to be corrected) or a desired
input (the pilot deems it necessary to be in that "unusual attitude")...?!?!

>The human pilot tells the computer what he/she wants the plane to do and the
>computer figures out how to move the control surfaces to make that happen.

Uh huh.

And what if the computer refuses to let the pilot do it?

And how does that computer "know" what to do?

My point in the last couple of paragraphs is that persons who KNOW how to
fly teach (program, in this case) the computer what it meeds ot know.

No machine to date, and to the best of my knowledge, has taken it upon
itself to "learn" somehting it wasn't programmed with. (Shades of "COLOSSUS:
The Forbin Project")

>>>More important, most car accidents are caused or exacerbated by human

>what was onboard that last mission?

No, they couldn't. But we could have put emergency stores on an unmanned
flight to send to them, or they may have been able to "lifeboat" at ISS.

Those scenarios have been the subject of public discussion before.

"Human Risk" and cost are the only two reasons they've not done it in the
past.

It cost us dearly with Columbia. Imagine if we had just put one MMP on
board each shuttle for one 30-60 minute pre-reentry EVA for Columbia (obviously
it wasn't an issue with

>>>jobs. That problem was solved.
>>
>> Yep..We just look the other way at the border once in a while! =)
>
>By saying that, even humorosly, you're saying you believe some people have to
>be enslaved economically.

They don't HAVE to, Jim.

Most of those people coming across the border certainly see it as a step
up...

Would you KNOWINGLY put your self at risk to do what THEY do to get here
if you thought you were going to be enslaved?

Those people are desperate and determined to make a better life for
themselves and thier families. If they peceived themselves as being
"enslaved", they'd not voluntarily submit them selves to it by the
hundreds-of-thousands every year.

>>>There was a time when it was seriously argued that women could not be
>>>allowed
>>>to vote because it would cause all kinds of problems. Turned out not to be

>>to Bill Clinton did so because some segment of women voters thought
>>he was more
>>handsome than President Bush, and thought that his rhetoric on women's
>>"issues" was "sweet".
>
>And who are these "pundits"?

Take your pick. Wanna start at the top with ABC's anchors and work your
way down to UPN? It was the regular topic of the news "magazines" back in 92,
96 and 2000.

>What is their data?

Who knows? Who cares? There were women willing to be on-camera and
acknowledge that they voted, in part, based upon looks and perception of
Clinton as "pro-woman".

Too bad they didn't know "pro-woman" just meant he wasn't gay.

>Most of all, even if their claim is true, how is it any different from:

>Men who won't vote for a black person?
>Men who won't vote for a Roman Catholic? Or a Jew?
>Men who won't vote for a person from a certain place or region?
>Men who won't vote for someone because they "feel" he "cannot be trusted"?

None at all.

Too bad that there isn't a test to determine voter competency, huh...?!?!

>No, it isn't.

Sure it is.

Not as much in the United States, anymore, but certainly in a great many
OTHER nations of the world.

>>A very large part of our imports from India and Pakistan are made by
>>kids.
>
>That may be - but we don't have to import those things.

You're right...we don't "have" to...

But we do...

>> Yes...it will still be there...but I for one am very disappointed that
>>after four decades of manned space travel, we still haven't done a darned
>>thing
>>to REALLY start exploring "space"...!
>
>We haven't? I say we have!

To the degree we we COULD be exploring it?

I say no. We COULD have been walking on Mars this past summer during the
Earth/Mars approach. It would have been the ideal time, we had more than
enough time to plan for it, and we had the inertia to get there.

>> awaiting implementation!
>
> So exactly how do we cure hunger, disease, poverty, and the fact that
>there is a significant number of people that don't think any of the
>above are a problem?

It's not that it's NOT a problem for me, Mike...but rather that it's not
bad enough for those people to take the tools given them and dig their way out.

The "answer", in too many of these places is to shoot whoever they
perceive as being responsible for them being that way.

Then the guy who got shot seeks revenge...Then the other guys wants to get
back at him for having dared to retaliate for what was "clearly" a valid attack
in the first place....

Etc Etc Etc.............

>I'm in a rush, and that is enough for me.

That's one of the few "benefits" of working the late shift...My "time off"
is during hours that I usually don't get disturbed!

Mostly money.

A one or two page pamphlet of what can be expected couldn't cost more than
a few extra cents to include in the device.

Of course if the consumer KNEW what they really needed to, they might
demand that the things be properly engineered and manufactured in the first
place!

> Len

He'll probably get upset to know that I used to augment the Inspector
General, traveling from base to base during ORI's. He'll demand
proof.

Hey, are you that blind? Read the whole article. It ends with the
following
statement:

"Founded in 1948, UTC represents the telecommunications interests of
electric and gas utilities, water companies, gas pipelines and other
critical
infrastructure entities, along with their technology partners."

Of course it's one sided trash. That's the whole point of the organization
that wrote it!

They hate Carl. He had a rational argument concerning the retention of code testing, and it found favor within the FCC. He doesn't worship at the Altar of St. Hiram, so he's the antichrist to them. If it were within their power, Carl would be tied to a stake and burned. Luckily only one PCTA thinks he can get a government bureaucrat to do his dirtywork. And he's nuts.

That's basically what I was trying to get at. People can do FD on their own or with a club but it may be better NOT to split off as a separate club. We have some members who do FD on their own in our club or they belong to more than one club already and do FD with them. But they do not go form yet another club.

I think doing different things year to year is good. Our club tried different antennas this year for example. Next year I and the OM my try going on our own just for variety simply to see what two people can do.

This is one weird group of licensed amateur extra regulars!

They care more about their "honor" in telling fibs of their exploits
then get totally pished at others who have had truthful
experience beyond the limitations of Part 97. Fantasyland at
times! :-)

BPL-PLC will mean an END to low-level signal reception on HF and
low VHF in urban areas but the licensed amateur extras in here
just want to FIGHT with anyone who challenges their mighty words.

They won't DO anything against the already-here problem of HF
pollution but they want to destroy anyone not believeing in their
fantasies of the religion of St. Hiram and the League-ionaires.

Even more bizarre is the on-going "discussion" between two extras
who have NO experience in space travel talking all about Big Issues
in Space...none of which concerns amateur radio policy! :-)

Well, time to celebrate the 4th coming up...and to worship at the
Church of St. Hiram who invented radio and the vacuum tube, etc.
:-)

>
> Yes, they do.

If the Access BPL system does not radiate incidental RF beyond
FCC regulations, the FCC is powerless to do anything about an
Access BPL system.

That might change in the future...but then the NTIA and FCC
would be vying for control of the information highway.

>> All the FCC can do - at the moment and in what they will probably
>> have on a new R&O - is the ability to stop INCIDENTAL RF
>> RADIATION beyond the level established by the Commission.
>
> Wrong....Again.

Incorrect. Quite right as I stated.

The FCC has NO power at present to control broadband
distribution of the Internet or other data services on any Access
BPL system. All the FCC can do - and are apparently NOT doing -
is checking the incidental RF radiation levels of installed Access
BPL systems in the USA.

Where is it indicated by the FCC has actually gone out and
measured the incidental RF radiation from any installed Access
BPL system? Answer: They haven't.

>> The broadband communications service over Access BPL can
>> CONTINUE in the USA.

>
> Not as long as it creates interference.

The installed Access BPL systems ARE creating incidental RF
radiation on HF and low-VHF. Now.

FCC hasn't done any measurements. Other folks have.

Docket 04-37 is about an NPRM by the FCC to further define the
test and measurement parameters of BPL plus add a definition
in Part 15 about Access BPL. The FCC hasn't done any
measurements...they haven't established - for themselves - a way
to do it. Not even a year after they asked about it (docket 03-104
an NOI or Notice of Inquiry).

The FCC is NOT acting on their chartered (by law) task of civil
radio. Access BPL is NOT a radio service.

>

>
> Then the FCC >>CAN<< stop it. Wether they will or not is subject to
>debate. But they CAN stop it.

All the FCC seems to be doing is sending letters.

There are several open issues of electric power lines in the USA
causing excessive incidental RF radiation. That hasn't been
stopped.

The measured incidental RF radiation from already-installed
BPL test systems has already exceeded FCC regulations. Those
test systems haven't been stopped.

>> Read the NTIA Phase 1 and Phase 2 reports.
>
> The NTIA does not enact nor enforce FCC rules and regulations.

No kidding? :-)

Why did you bring up your supreme court ruling?

The Telecommunications Act of 1996 pretty well outlines (by law)
which agency does what and where.

If you bother to look (which you obviously haven't), the NTIA does
have the legally-authorized power to measure things like the
incidental RF radiation from unintentional emitters. NTIA also has
power to consider spectrum utilization insofar as the entirety of
the United States.

The NTIA study does NOT try to take over anything. It is a study
of already-installed Access BPL systems and comment on the
impact of such incidental RF radiation on existing radio services,
both civil and government.

>> Well, what are you going to DO about it? Just sit there and send
>> messages on a broadband provider talking all about "CW getting
>> through when nothing else does?"
>
> No one has made that assertion in this thread, Lennie.

Well, what is the forever murine going to DO about BPL?

Point fingers, shout and yell because his little pride has been
hurt in the newsgroup? Tsk, tsk. Poor baby.

Access BPL has already been proved to radiate excessive RF
noise at all test installations in the USA. Enough so that the
NTIA higher echelons have declared - A 10 db increase in the
noise floor on HF is a small price to pay for increased availability
of broadband for all citizens.

So, the forever murine wants to accept an HF noise floor that
is ten times higher in noise power? Apparently so.

> Please try to keep your emotions from interfering with judgement.
>
> (oooooops....too late...)
>
>> The incidental RF radiation from overhead electric power lines is
>> going to affect ANYONE trying to listen on HF and some low-VHF
>> frequencies.
>
> Uh huh.
>
> And the FCC has issued dozens of letters to those carriers demanding they
>clean up their act or else.

WHERE are all those "dozens of letters" to "carriers?" [service
providers]

There's no, repeat NO, evidence of "dozens of letters" in public view.

>> I've ALREADY addressed the ENTIRE COMMISSION as ignorant
>> on technical matters. They are. QED. Quod erat demonstrandum.
>> [it is as demonstrated] That's in public view, on the record.
>
> So are your frequent misrepresentations of the character of Amateur
>Radio, your military record, and your professional "career".

Irrelevant in this discussion. The forever murine wants to FIGHT
over old, old issues he lost long ago in here. That is NOT a part
of the good work done by the Cedar Rapids, Iowa, amateur radio
organization on their Access BPL problems.

Dozens of licensed radio amateurs, organizations have already
chided the Commission on their apparent ignorance of technical
matters concerning Access BPL. Add to that at least four
state-licensed professional engineers who have no amateur radio
licenses. It's all there in over 1500 Comments on docket 04-37.

> Another personal attack on someone who didn't attack you personally.
>
> Putz.

Tsk, tsk, tsk. The forever murine resorts to Yiddish colloquialisms
which are pejoratives again?

The forever murine speaks Yiddish? Hebrew? He thinks it is "okay"
to use foreign (to him) cuss words because he isn't familiar with
the language? Yet the forever murine tries to object when another
uses Anglo-Saxon four-letter words...saying that is "profanity!"

:-)

>> The ARRL is NOT the major objector to Access BPL. You could see
>> that from the comments on dockets 04-37 or 03-104. But, you can't
>> see that and continue with the "praise the league" as if they were the
>> only group against BPL.
>
> That's not what he said.

Rev. Jimmie cannot fault the ARRL in much. The League is
sacrosanct to him. That's what he has said repeatedly in many
many messages in here.

>> What "help" did the ARRL do in Cedar Rapids, Iowa?
>>
>> Identify that "help."
>>
>> The Cedar Rapids group WENT OUT AND DID IT BY THEMSELVES.
>>
>> They TOOK ACTION.
>>
>> They didn't go around mumbling catechisms for the league and do
>> nothing. THEY DID SOMETHING.
>

> Uh huh.
>
> Supported by League elected field leadership.

Describe this "field leadership." :-)

You cannot describe it because you do NOT know it. All you can
do is mouth very general phrases. Tsk.

>>>How do you know what it would take, Len? Have you done it?
>>>Have you sent a check to help out?
>>
>> Why are you trying to start a Flame War on this?
>
> He asked you a direct question.

Nope. It was a leading question. Irrelevant.

I praised the Cedar Rapids amateur radio group for their efforts
which are clearly seen in several docket 04-37 comments.

Somehow the forever murine can't understand that.

> What have YOU done to help support the anti-BPL effort?

Far far more than the forever murine has done. :-)

>> Clue: Access BPL is NOT a "radio service."
>
> Clue: It IS a communications technique deployed via an FCC-controlled
>medium.

Incorrect. It is not a "communications technique." Try to get
reasonably close to the correct nomenclature.

The FCC does not "control mediums." It regulates USA civil radio
according to Congressional laws Communications Act of 1934 and
the Telecommunications Act of 1996.

Access BPL systems are NOT radio systems. They do not
intentionally broadcast any information, broadband or otherwise.

The FCC can regulate the incidental RF radiation from devices.
So far, the FCC doesn't do a good job on those incidental RF
radiation devices other than Access BPL.

>> Access BPL has INCIDENTAL RF RADIATION that is "not intentioned
>> to transmit any radio frequency information."
>
> And that "incidental radiation" >>IS<< an FCC regulated value.

It is a level. [try to use common terms, it makes it easier for others
to understand what you are mumbling about...]

So far, the only "regulation" on incidental RF radiation devices has
been some letter writing and trying to calm down irritated citizens
who are still victims of RF noise pollution.

>> Access BPL is a broadband communications carrier. As such it
>> might be - at some future time - under FCC control IF IT CROSSES
>> STATE BOUNDARIES in providing such a communication service.
>> [the telephone infrastructure already crosses state boundaries by
>> default since the communications capabilities are so built-in]
>
> It already IS under FCC control.

The forever murine still doesn't understand the issue over Access
BPL. Try to understand. It is difficult but, if you apply yourself
dilligently, you MIGHT be able to understand.

> Are you ever going to participate in that "civil debate" that you always
>lament others as allegededly not doing?

Not in an atmosphere of the forever murine always calling his
perceived enemies as "putz." :-)

>> Why are you trying to hide from the obvious RF pollution?
>
> A thorough read of Jim's posts indicate otherwise.

Incorrect.

> And at least Jim HAS a license that allows him to USE those HF
>allocations.

That AMATEUR radio license doesn't have any legal power to
pollute RF. Read Part 97 carefully.

AMATEUR radio licenses are rather limited in their "USE" of HF
communications. That's the LAW. :-)

LHA / WMD

with the "Air America" radio program, "Day After Tomorrow" and
"Farenheit 911" movies, and Bill Clinton's book "My Life."

What a bunch of hooey.

There's conduit and to a lesser extent BX wiring in the house, but
nobody's going to change
out the romex to get this shielding. And you still have all those
unshielded portable power
cords feeding table lamps, toasters, TV sets and such...

As Beavis and Butthead are fond of saying: "You can't polish a turd".
There's no way to
make BPL using HF and VHF frequencies not QRM licensed users of those
frequencies.
Even microwave BPL is going to goof someone else up. Except maybe put
them on the
same frequency as that used by all the microwave ovens...

The people that elected him twice aren't the ones complaining about
him. It's the people in power now. And last time I checked, while they
hold a substantial majority in the House, a majority in the senate, and
the Executive branch also, what I hear from most of the genre is whining
about him, Democrats and the Evil Liberal.

That is a tacit admission of incompetence. Yet they don't even
realize it. They are too busy blaming.

I have cable. I'm paying less than you, but I'm not sure exactly how
much. DSL is available,as well as some kind of wireless. We certainly
don't need BPL.

Here around the Detroit area, there is dialup, WIFI, DSL, and cable. Some areas have all of these available while some "only" have three choices.

Dialup is as low as $9.95 and cable can be had for $29.95 for the first 6 months (it rises after that to about $49.95 but with the competition, it may stay down). WIFI and DSL are around the $30 mark.

As I've stated before, BPL can only "make it" if it is as cheap as dialup and as fast and reliable as cable, in my opinion.

You probably won't. I suspect you won't be running the linear at the
same time as the audio amp, so at any given time, the current draw
shouldn't overwhelm your truck's electrical system.

As a side note, you do know that running that CB amplifier will be
illegal, don't you?

Yeah, but he's throwing in some optional equipment too. (Gotta be fair.)

Optional Accessories Included With This Auction:
Yaesu (2nd/Spare) Lithium-Ion Battery Pack (FNB-80LI)
Yaesu Rapid Charger/Cradle (CD-15A)
Yaesu Barometric Pressure Sensor Unit (SU-1, installed)
Yaesu DC Cable (EDC-6, for ext. pwr supply or auto)
Yaesu Speaker/Microphone (MH-57A)
Yaesu Microphone Adapter (CT-91, for alt mic or cloning)
Yaesu Soft Case (CSC-88)
Yaesu BNC-to-SMA Adapter (CN-3)
"The Clip" Vehicle Dash Mount (use with belt clip)
Pocket Quick Reference Card

I am always amazed by what people are willing to pay on Ebay.
Accessories or not, there is no way that I would ever throw down half a
grand for something without a warranty.

We're just about due to be hit by the Ebay apologists, who demand that
they be allowed to post their ads wherever they see fit. I don't know if
you've seen how many ng's this one's been in, but lots of irrelevant
groups, like rec.radio.amateur.boatanchors, and rec.radio.amateur.dx.

All I ever asked was that they put an FA: on it (this one did) and to
not post it to unrelated newsgroups. Hey, that is spam, dude, which puts
it right up there with the disgusting Simpson's posts, and the products
that will make mr. Willie gigantic.

No, that is not correct. There is no law against running a CB amp.
in you vehicle. It is completely legal.

Wyoming is the only state at this time that requires an
"amplifier endorsement" on your driver's license. But that is just a
matter
of paying the $1 fee, getting the endorsement, then you are completely
legal.

Mark

And because you memorize 25 questions out of a book, then go back
and spew them out on a so called "test" that your ham buddies "give"
you, is that suppose to make you "intelligent" oh Mr Foot-In-Mouth
ham??????????

ROTFLMAO!

The guys over in the Dodge truck group will probably not appreciate
it that you are calling them "pretty darn stupid," just because you think
you know more because you are a ham radio operator.

A lot depends on what goals are defined and resources available. For max
points, it's important to be ready to go on right at 2 PM (1 PM your time?) and
run all through the 24 hours with no breaks. Which usually means starting setup
before Saturday morning and going all night.

OTOH, sometimes FD can be a shakedown for bigger things. Like trying out an
antenna "in the field" before committing all the work needed by a permanent
home installation.

I'm in the Eastern time zone. With just I and the OM running (if we go that
route), we will set our goals so that we will NOT try to run 24 hours.
Neither one of us fairs all that well on lack of sleep.

Oh, you could use a "CB" amp on any ham band *IF* you have the grade of
ham license
for whatever band/subband you wish to use. But you better clean up the
harmonics it
will likely produce....

>place!

Exactly! But that would raise the price, which would cut into sales. And getting mfrs. to do it would probably require government regulations more strict than those now in effect...

Anything that draws power from your auto electrical system will decresae
mileage -- by how much depends on the current draw.

E.G., your car headlights and night lights

153. The Traveling Salesman Problem

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-05 01:53:04 UTC
From: n2ey@aol.comSPAMNO
Message-ID: <20040704215304.14094.00000347@mb-m21.aol.com>
Source record: 93879

A traveling salesman wishes to make a number of sales calls in different cities. Naturally he wants to spend as little time actually traveling as possible (he is not paid for travel time).

He sets up the various cities he wants to visit and looks up the travel time from each one to every other one. He writes a simple computer program to figure out all of the possible routes and compare the total travel time in each route, in order to find the fastest possible route. (The problem could also be worked for minimum distance).

The program is written for any arbitrary number of cities. But the salesman discovers that the program appears not to work for more than a certain number of cities. Explain what the limit is and how it can be overcome.

>What can a sub-orbital ship hope to offer that aircraft operating at
>lower altitudes don't alread offfer?

Not much on their own. But such ships are the first step to low-cost manned orbital missions. An X-15 flight cost far less than any Mercury mission, for example.

Depends on the failure. Many failures give warnings via telemetry. Others show up in simulation. For example, one of the Voyager scan platforms froze up, yet was remotely fixed by analysis of an earthbound simulator.

But the CH53 was intended to be a human-piloted aircraft, used in a variety of
roles.

>>Many human ills cannot be self-repaired, either.
>
> Any your point is...?!?!

That the risk must be balanced against the benefits.
>
>>Look at Cassini-Huygens - more than 7 years in space and performing
>>perfectly.
>
> Uh huh...Against how many that never left the pad, or failed enroute?

Such as?

Would you rather humans not explore Mars, Venus or the outer gas-giant planets
at all until manned missions can be sent?

>Those "robot"

Robot what?

>>> I am willing to bet that the Brit's "Beagle 2" mission burnt up on
>>>entering the Martian atmosphere.
>>
>>Why? What data supports that?
>
> "..."
>
> (sound of signal from probe after "re-entry")

Burning up is only one of many explanations. The silence could also be caused
by:

- Some part of the reentry system failed that did *not* result in burn-up
(parachute didn't open, hard landing damage, etc.

- Some part of communications system failed

- Landing site anomalies

>>> Maybe had it been a manned mission, the
>>>1/10th of a degree attitude adjustment necessary to PREVENT it could have
>>>been made.
>>
>>Doubtful. The machines are faster and more accurate at such tasks than

>>humans.
>
> Not always.

Can you think of an example?
>
>Know why I carry my stethoscope at all times in the ER despite a
>plethora of "non-invasive diagnostic devices"...?!?!
>
> Because those "machines" are NOT always faster and more accurate than a
>human. Nor do those machines have the ability to "filter out" the audible
>ectopics that the human brain has.

That's good but the problem of reentry is completely different. Can you
estimate a 1/10th degree angle error better an faster than an automatic system
designed for the job? Particularly in 3 axes at spacecraft speeds?

>>> How many other massive spaceborne telescopes have we had on orbit?
>>
>>There are some smaller ones but none like Hubble.
>
> I reiterate the adjective "massive"...! ! ! ! !

Hubble is unmanned. One of those robots. Its aiming accuracy is considerably
better than 1/10 of a degree, I think.
>
>>I'm not confused at all. Some folks, however, think that because humans went
>>from Kitty Hawk to supersonic flight in less than half a century, and from

And we have lots of advancement.
>
> I for one don't see it happening.
>
I do.

>The Cassini mission is great, but what new technology or methodolgy are
>we using?

Several:

- Cassini carries with it the probe Huygens.
- Cassini used gravitational boosts from other planets to get to Saturn years
faster than with rocket power alone.
- Cassini has smarter computers, better sensors, etc.

>>>>> Once upon a time, we built the thing. It was important enough to take

Do you the chances of that are 1 in 75?

>So...Considering that, do Nurses and Physicians just thrown up their arms
>and say "unreasonable risk" and quit?
>
> I'd hope not.

No - but what they have done is to increase the precautions taken - with *all*
patients. This costs more money and time, and reduces "productivity". But it's
necessary. And the risks are far less than 1 in 75.
>
> And I'd hope we'd move manned space flight forward from LEO.

Me too.

You misunderstand how those systems work. Their job is to figure out how to get
the plane to fly the way the human pilot wants it to.
>
>>The human pilot tells the computer what he/she wants the plane to do and the
>>computer figures out how to move the control surfaces to make that happen.
>
> Uh huh.

Yep. Look it up.
>
> And what if the computer refuses to let the pilot do it?

It doesn't happen.

If the computers fail badly enough, the pilot has to eject. There's no direct
mechanical link from the control stick and foot pedals to the aircraft control
surfaces. That's what fly-by-wire means.

> And how does that computer "know" what to do?

Programming.
>
> My point in the last couple of paragraphs is that persons who KNOW how

>>
>>Yep. Men from Reagan;s White House....
>
> Nope...Men from NASA.

Who were pressured by Reagan's White House. Documented fact - the White House
wanted the "teacher in space" program to go. It had already been delayed. The
whole shuttle program was way behind schedule. But rather than admit that the
schedule was simply unrealistic. and should be revised, pressure to launch was
fed down the chain of command.

Try to remember what the mindset was back then. NASA had *never* lost *anyone*
in space before Challenger. The Apollo 1 fire, horrible as it was, did not
result from a rocket or reentry system failure. Apollo 13 got back safely. At
least some folks thought NASA was "overcautious".

>>> It was suggested that thios would place the crew at too much risk.
>>

>>
>>Designed, maybe. Built, tested and certified for manned space flight? No.
>
> Why?

Because there's a lot of work to getting something actually built, tested, and
certified as safe to take into space. Particularly something new.
>
>They couldn't put a package together that NASA could adopt and
>incorporate?

Still has to meet the requirements. For example, if a component in the package
- *any* component - decides to outgas certain chemicals, all kinds of problems
can happen. So the components used all need to be certified and tested. And the
manufacturing and assembly processes need to be certified and tested. Look at
how long it takes to build and launch an OSCAR..

> From where are current NASA "rocket scientists" gleaned anyway?

Lots of places.

Has anyone submitted evidence of humans traveling faster than light?
>
>>Not a matter of better rockets or materials - it's the very nature of the
>>universe
>>that is the limit. Of course that knowledge could change! But at the present
>>time, human travel at or beyond the speed of light is *not* a matter of
>>money
>>or effort; it's a matter of physical reality. Basic relativity physics, IOW.
>>
>>And as Hans says so well:
>>
>>"Reality does not care what you believe"
>
>So far, I'd say that the human imagination, when properly interfaced
>with
>human ingenuity and dedication, has done a pretty good job of making things
>"happen".

Only things that are possible. Bullets and V2 rockets broke the "sound barrier" before the X-1 did. The question was not "could something go faster than sound" but "how do you make an airplane that can do it?"

Nothing goes at light speed except light (in the broadest sense). Nothing with a nonzero rest mass has been accelerated to or beyond light speed. Basic relativity physics.

>I'd sure like to google-up these comments 50 years from now and see just
>how far we progressed, and then either see if they exceeded expectation, or
>if not, why not.

You don't seem to understand the difference between knowing something is possible and not knowing how to do it, and not knowing if something is possible at all.

Specifically, the current knowledge of physics says that "warp speed" is simply not possible because the universe isn't built to allow it.

How do you know?

>It would have been the ideal time,

If you say that, you don't understand much about how such missions actually
work. Particularly the orbital mechanics of getting from here to there and
back.

> we had more than
>enough time to plan for it, and we had the inertia to get there.

Easy to say if you don't have to actually do it.

Tell us how big a manned Mars mission ship would have to be in order to get to
Mars and back, carrying all the supplies, spares and equipment needed. Or give

us an alternative scenario, such as sending supply ships on ahead to Martian orbit - *with details*. Tell us how long the trip would be, and what the relative planetary positions would be at the start, Martian landing, and return.

Tell us how those who land on Mars would deal with the cold, wind, and dust.

Most of all tell us what it would all cost, and what we would do that could not be done by robots.

I'd be very interested in seeing a link to back that up. As far as I know it is very illegal to use a CB linear. You can own one, buy one, sell one but you cannot use it on a CB. Last I heard the FCC would not only fine you but confiscate your gear also. Besides if the radio is not properly set up and tweaked to run with a amp it is going to sound like trash any way.

Jerry

In addition to the many accessories clearly described on the auction page, some items were not listed. This bidder contacted me early in the auction to tell me he wanted both Yaesu radios. As such, as an extra incentive, I offered him several additional items (software, computer cables, and cloning cables). I also notified each bidder of an included MFJ antenna not listed on the auction page. The total new purchase price of all items included with this one auction is in excess of $600. Between the two auctions, this bidder saved several hundred dollars over new prices.

Good grief. What are you complaining about, Mike? All of these were newsgroups I have personally been involved with many times over the last ten years. All messages included clear subject lines with the obligatory "FA" prefix. Since you were not, in any way, required to read those messages, it is no skin off your back, right?

> All I ever asked was that they put an FA: on
> it (this one did) and to not post it to unrelated
> newsgroups. (snip)

All _you_ ever asked?? Who in the heck died and made you king of these newsgroups?

> Hey, that is spam, dude, which puts it right
> up there with the disgusting Simpson's
> posts, (snip)

If you have a complaint, report it to my service provider. However, I suspect that service provider will agree the sell of ham radio-related items, by a ham operator, in a ham radio newsgroup, especially a newsgroup where that ham operator has been active for many years, is not spam. Regardless, since the auctions are over and I'm (thankfully, springs to mind here after reading your comments) out of ham radio, I can guarantee I will not bother your fricking little newsgroup again anytime soon.

Sec. 95.639 Maximum transmitter power.

(c) No CB transmitter, under any condition of modulation, shall
exceed:
(1) 4 W Carrier power when transmitting emission type A1D or A3E;
(2) 12 W peak envelope TP when transmitting emission type H1D, J1D,
R1D, H3E, J3E or R3E. Each CB transmitter which transmits emission
type H3E, J3E or R3E must automatically prevent the TP from exceeding
12 W peak envelope TP or the manufacturer's rated peak envelope TP,
whichever is less.

From: "Leland C. Scott" <kc8ldo@arrl.net>
Message-ID: <L9SdnYpX96naZnXdRVn-sA@comcast.com>
Source record: 93888

This looks like a problem from Discrete Mathematics. To me it appears to be a specific problem in finding what is called the minimum "Spanning Tree" for a graph. For your problem the graph vertices would be the cities visited and the distance, or what ever you want to minimize, assigned to the edges connecting the vertices together.

Two known algorithms are used to find a set of edges connecting all the vertices together that will minimize the item assigned to the edges as a weight factor. The two algorithms are "Prim's" and Kruskal's". Their work was done during the 1950's. At most (N-1) edges, where N is the total number of edges in the graph, are selected during the course of the algorithm. Nether algorithm has any limit on the size of the graph, vertices or number of edges, that I can find.

(Robert Clay Prim born 1921 Sweetwater Texas)
(Joseph Bernard Kruskal born 1928 New York city)

The book I have as a reference is:

Discrete Mathematics And Its Applications
(Third Edition 1995)
Published by McGraw Hill
By Kenneth H. Rosen
ISBN 0-07-053965-0

Look at pages 593 (section 8.6) to 598.

There are some older methods that use what is called "depth-first searches", or "back tracking", and the other is called "breadth-first search". These are covered under (section 8.5) pages 583 to 588.

The problem with writing code for graph transversals is two fold. The first is keeping track of where you have been, and second is not getting stuck in what is called a "cycle" or a loop in the graph. The way I've seen this done is using recursive code while building a tree structure of the nodes "visited", where each tree entry is for a graph node. The code starts at a beginning node, or current node, then follows every path from the current node to the next node if the path is not already listed in the tree entry for the current node. The new path is entered in the path list for the current node. If the path is already listed then it has already been explored and should be skipped. If the next node is not in the tree then enter it and make it the current node, other wise keep looking for another path from the current node location to another node. If no more paths exists from the current node then return to the previous node, making it the current node, while marking the path as blocked. When no more paths exist to explore at the current node then return to the previous node and explore the

next path not yet transversed. This procedure continues until either a path
to the destination node is found, or all nodes and paths have been explored.
Then doing a tree transversal "in order" looking for paths not marked as
blocked will generate a list of nodes and paths between nodes spanning from
the begining node to the destination node.

Graph theory is interesting and has a lot of practical applications in the
real world.

> society nor even that of my childhood.

Really?

> For the same reason,
> modern society does NOT think of "wireless' as anything like the
> old 1920s term of radio.

No.

"Radio" was known as "wireless" as a shortened version of "wireless telegraph"
or "wireless telephone". The term stuck around much longer in British
Commonwealth countries - well into WW2 at least.

> If the "'phone folks" called cellular anything, it was "mobile."
> It still is and many industry folks refer to it as "mobile,"
> synonymous with "cell" and "cellular."

Maybe where you are. But around here the term "wireless" is used
interchangeably.

The point is that they avoided the use of the word "radio". "Wireless" sounds
new and exciting to people who don't know it's a recycled term.

> [count on another argument and ignitor of potential flame wars

My Amateur Radio licensure has nothing to do with it.

I was a CBer long before I was an Amateur. CB rules forbade external amplifiers before I was an Amateur, and they still forbid them today.

Part 95 (CB regulations...NOT Amateur) say so.

If he's using an RF amplifier for CB, he IS pretty darn stupid. Last I checked the fines can be as much as $8000 per day per violation if the FCC really wanted to be ugly about it.

It really is THAT simple.

> Southern California wasn't that "arid" 50 years ago.

Yes, it was. What made Southern California possible - LA in particular - were
enormous irrigation projects. Most of them were at least partly federally
funded. Heck, the Colorado river no longer reaches the ocean - *all* of its
water is diverted.

The truth is that Southern California could not support its population if the
water wasn't brought from many miles away.

> I know. I see a lot of them.

Compute the highway death rate compared to trips taken, miles driven, etc. It's
a lot lower than 1 in 75.

And *most* accidents are caused by driver error, not mechanical failure.

Just one example: How many accident victims do you see who would have lived, or
been significantly less injured, if they had used seat belts?

Hey TROLL, quit spamming the Dodge truck group. And when are
you ever going to upgrade from your No Code Tech license?
And the Wyoming amplifier endoresement has been around for years.
Stop showing how ignorant you are oh No Code Techness.

In any good club, YES. We have members in our club who have no license of any kind. They just like to be involved in the club and see the presentations. Anyone who has any interest in ham radio is welcomed. However, expect them to encourage you to get an amateur license too.

What a load of shit. Since when were amps illegal for Hams? Linears are
now and always have been illegal for CB's which would make sense since CB is
defined as a SHORT RANGE communication device only.

Note the date, Dog. Try going to the CFR Search site to look up current
regulations. Try
http://www.access.gpo.gov/nara/cfr/waisidx_03/47cfr95_03.html or
http://tinyurl.com/2dqzk for short.

Additional searches can begin at
http://www.access.gpo.gov/nara/cfr/cfr-table-search.html#page1 or
http://tinyurl.com/33nq5 for short.

CB Amplifiers are not legal to hook up and use in the United States. I
don't know were you are writing from, maybe Canada, England, Nigeria or
South Carolina, who knows.

http://a257.g.akamaitech.net/7/257/2422/05dec20031700/edocket.access.gpo.gov/cfr_2003/octq
tr/47cfr95.411.htm
or http://tinyurl.com/2jvm5

[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2003]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.411]

[Page 580]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95_PERSONAL RADIO SERVICES--Table of Contents

Subpart D_Citizens Band (CB) Radio Service

Sec. 95.411 (CB Rule 11) May I use power amplifiers?

(a) You may not attach the following items (power amplifiers) to
your certificated CB transmitter in any way:

(1) External radio frequency (RF) power amplifiers (sometimes called linears or linear amplifiers); or
(2) Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
(b) There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
(c) The FCC will presume you have used a linear or other external RF power amplifier if--
(1) It is in your possession or on your premises; and
(2) There is other evidence that you have operated your CB station with more power than allowed by CB Rule 10, Sec. 95.410.
(d) Paragraph (c) of this section does not apply if you hold a license in another radio service which allows you to operate an external RF power amplifier.

[48 FR 24894, June 3, 1983, as amended at 63 FR 36610, July 7, 1998

And your current Government link to your version of regulations is where?

[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2003]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR97.313]

[Page 642-643]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 97_AMATEUR RADIO SERVICE--Table of Contents

Subpart D_Technical Standards

Sec. 97.313 Transmitter power standards.

(a) An amateur station must use the minimum transmitter power necessary to carry out the desired communications.
(b) No station may transmit with a transmitter power exceeding 1.5 kW PEP.
(c) No station may transmit with a transmitter power exceeding 200 W PEP on:
(1) The 3.675-3.725 MHz, 7.10-7.15 MHz, 10.10-10.15 MHz, and 21.1-21.2 MHz segments;
(2) The 28.1-28.5 MHz segment when the control operator is a Novice Class operator or a Technician Class operator who has received credit for proficiency in telegraphy in accordance with the international requirements; or
(3) The 7.050-7.075 MHz segment when the station is within ITU Regions 1 or 3.
(d) No station may transmit with a transmitter power exceeding 25 W PEP on the VHF 1.25 m band when the control operator is a Novice operator.

[[Page 643]]

(e) No station may transmit with a transmitter power exceeding 5 W PEP on the UHF 23 cm band when the control operator is a Novice operator.
(f) No station may transmit with a transmitter power exceeding 50 W PEP on the UHF 70 cm band from an area specified in footnote US7 to Sec. 2.106 of part 2, unless expressly authorized by the FCC after mutual agreement, on a case-by-case basis, between the District Director of the applicable field facility and the military area frequency coordinator at the applicable military base. An Earth station or telecommand station, however, may transmit on the 435-438 MHz segment with a maximum of 611 W effective radiated power (1 kW equivalent isotropically radiated power) without the authorization otherwise required. The transmitting antenna elevation angle between the lower half-power (-3 dB relative to the peak or antenna bore sight) point and the horizon must always be greater than 10\o\.
(g) No station may transmit with a transmitter power exceeding 50 W PEP on the 33 cm band from within 241 km of the boundaries of the White Sands Missile Range. Its boundaries are those portions of Texas and New Mexico bounded on the south by latitude 31[deg] 41[min] North, on the east by longitude 104[deg] 11[min] West, on the north by latitude 34[deg] 30[min] North, and on the west by longitude 107[deg] 30[min] West.
(h) No station may transmit with a transmitter power exceeding 50 W PEP on the 219-220 MHz segment of the 1.25 m band.

[54 FR 25857, June 20, 1989, as amended at 56 FR 37161, Aug. 5, 1991; 56 FR 3043, Jan. 28, 1991; 60 FR 15688, Mar. 27, 1995; 65 FR 6550, Feb. 10, 2000]

Now here's a really dumb ass, still has yet to catch on the whole
thing was a spoof! He's still taking it seriously. It's scary to
think
this guy might actually use electronic equipment powered by live
electricity.

ROTFLMAO!

They can lower the regulatory limit. They can write new regulations, saying
that existing Part 15 rules were meant for point-source radiators like computer
monitors, not distributed systems like BPL.
>
> You still don't understand just who approves or disapproves a provider.

You still ignore the role fo FCC in nonradio communications.
>
>>> Access BPL can, and already does, by
>>> rather obvious examples, ALREADY EXCEED REGULATORY
>>> STANDARDS on incidental RF radiation levels.
>>>
>>There's no reason to shout, Len.

> without any spritzer. We can't help your feelings of inadequacy...

In other words, you don't know what to do either. So you lash out at me for asking the question.

>>> Just sit there and send
>>> messages on a broadband provider talking all about "CW getting
>>> through when nothing else does?"
>>
>>I've never said that, Len.
>
> No? Not even once? :-)

Nope.

Now, I have said things like:

"sometimes, CW gets through when other available modes do not"

which is an absolutely true statement.

>>And all I have is a dialup connection.
>
> Now, now...you've said many, many times you "know' what FCC will do!

?? How does that follow from having a dialup connection?
>
> You pretend to be an "insider" with all that "knowledge." :-)
>
Not me.
>
>>> The incidental RF radiation from overhead electric power lines is
>>> going to affect ANYONE trying to listen on HF and some low-VHF
>>> frequencies.
>>
>>Have you actually heard any of it?
>
> Only recordings.

Recordings made by whom? Supplied to you how?

> I HAVE heard plenty of random garbage from HV
> corona, neon signs, arc welders, low-power RF bulbs now all the
> sales rage in do-it-yourself stores to "cut down on electricity
> consumption."

None of them are BPL.

>>And why are you so concerned? You're not a radio amateur.
>
> I am a radio professional.

Really? I thought you were retired.

> Professionals GET concerned.

Usually, only when there is money involved. Money for them. The UPLC folks are all professionals.

>>>>> There's no good signs evident that the FCC is coming even
>>>>> close to realizing the gargantuan task of monitoring BPL of the

>>>
>>> Someone die and you were appointed New Headmaster?
>>
>>No. Did someone appoint you to that position?
>
> Never claimed to. :-)

You just act that way.

> YOU are the one trying to ask leading questions.

What's the problem with my questions? Don't you know the answers?
>
>>> Hell, yes, I would refer to FCC Chairman Powell as "Mikey" right
>>> to his face...if I was commenting on the idiotic decisions to
>>> abandon all existing radio services and government radio services
>>> to the RF noise pollution of Access BPL.
>>
>>Do you think it would help?
>
> It would help ME. :-)

Do you think it would help stop BPL?

> It wouldn't be done unless BPL was a fait accompli. I think it is.

Sounds like a "yes" to me.

Would you advise the rest of us to refer to Chairman Powell that way? How about
we all make up derisive nicknames for the various commissioners and other
regulators?

Is that the professional thing to do?

>>> I've ALREADY addressed the ENTIRE COMMISSION as ignorant
>>> on technical matters. They are. QED. Quod erat demonstrandum.
>>> [it is as demonstrated] That's in public view, on the record.
>>
>>I must have missed that in your comments. Did it help stop BPL?
>
> My telling the truth in here hasn't stopped you one bit. :-)

What truth?
>
> I take it you aren't concerned about Access BPL? You feel NO
> danger of it polluting HF in the near future?

I'm very concerned. But so far, the only advice on how to fight it that you
have given is for me to make up insulting nicknames for FCC personnel. Somehow
I think that's night the right approach.
>
> You should. All radio amateurs should.

Why are *you* so concerned? You're not a radio amateur.

> Now if you've READ the NTIA
> reports, READ the reports of the Cedar Rapids group on measured RF
> interference, you SHOULD be concerned. Be very concerned!

I am. But concern alone doesn't change anything.
>
> But, no, your only "concern" is trying to have weak verbal fisticuffs in
> here, trying to "assert" yourself by talking down to others... Tsk.

Not me, Len. That's your role here. Referring to others as "feldwebel" and
"idiot" and such.

>>>>> The only perceivable way to fight BPL is now after-the-fact, like
>>>>> the Cedar Rapids group did, apparently successfully. But, that
>>>>> takes a concerted group effort in each amateur radio locality.
>>>>> ARRL can't be dependent as the "big gun" to fight BPL.
>>>>
>>>>But they *can* give needed help, and act to coordinate efforts. And if

>>>>else, ARRL has continued to publicize the BPL threat both inside and
>>outside
>>>>the amateur community, and to spread accurate information on what is going
>>>>on.
>>>
>>> What is that statement you make...another Sermon on the Antenna
>>> Mount?
>>
>>Just some simple facts, Len. Would you rather that ARRL not be involved?
>
> The FIRST league "reports" were only computer simulations.

That's all that was available at the time.

Would you rather that ARRL not be involved?

> It took some
> months before they could hire a professional instrumentation service to
>get
> first-hand data on the REAL RF radiation.

There were also on-site observations made by W1RFI and others.

Would you rather that ARRL not be involved?
>
> Money for the ARRL hired service came out of the league's budget. There
> was NO money reported spent by the Cedar Rapids amateur group.

Is money spent the only measure for you?
>
>>> The ARRL is NOT the major objector to Access BPL.
>>
>>Neither are you.
>
> Childish response. Tsk.

Infantile statement by you. Tsk.tsk ;-)
>
> Why are you objecting by doing such childish commentary?

Why are you avoiding simple, direct questions?

Would you rather that ARRL not be involved?
>
> The only rational answer is that you really don't know much about BPL
> and/or want it to come in to everyone's urban residences....and radios.

Nope.

I'm simply looking for effective ways to fight it.

Would you rather that ARRL not be involved?
>
>>> You could see
>>> that from the comments on dockets 04-37 or 03-104. But, you can't
>>> see that and continue with the "praise the league" as if they were the
>>> only group against BPL.
>>
>>I think it really bothers you that ARRL is playing any role at all in it.
>You
>>ever meet Ed Hare, W1RFI, or see his presentation?
>
> Doesn't bother me at all. :-)

I think it does.
>
> It DOES bother the heck out of you, though, because you bristle and
> get most hostile at the slightest negativism of your beloved leadue!

Would you rather that ARRL not be involved?
>
>>>>The Iowa group and the affected amateur both publicly thanked ARRL for
>its
>>>>help.
>>>
>>> What "help" did the ARRL do in Cedar Rapids, Iowa?
>>
>>I don't know. But both the Iowa group and the affected amateur thanked them.

> See? One little harmless NON-praise of ARRL and you get hostile. Tsk.

Nope.
>
>>> Identify that "help."
>>>
>>Why?
>
> So everyone one know what the Great ARRL can do! :-)
>
>>Do you think they would have thanked ARRL for no help?
>
> I don't know what "they think." Telepathy not an attribute here.
>
> But, you try with the leading, hostile question again! :-)
>
>>> The Cedar Rapids group WENT OUT AND DID IT BY THEMSELVES.
>>
>>How do you know? Were you there? Did you help them?
>

>
> What has that to do with a BPL Pilot Project in Cedar Rapids in
> 2003-2004?
>
> Answer: Not a thing.

Wrong answer.

>>The Republican administration of George Bush (the elder) gave us medical
>>waivers for code tests, the no-code-test Technician license, and set in
>>motion the end of the maritime Morse requirements.
>
> Poor baby. More with misdirection into presidential and party politics.

Wrong answer.
>
> Tsk, tsk, tsk. The Maritime World was already dropping manual
> telegraphy by 1990 and had begun earlier than that.
>
> The BPL test in Cedar Rapids doesn't have a thing to do with "medical
> waivers," "code tests," or Technician class licenses, or "setting much
> in motion" except showing that BPL is BAD for HF.

Yes, they do.
>
>>The Republican administration of "now" supported the revision of treaty part
>>S25.5 to eliminate the requirement for Morse code testing, thereby clearing
>>the path for the elimination of all code testing in the USA.

The pattern is set: Republican administrations seek less regulation of radio,
even to the point of allowing spectrum pollution by BPL.

There was also the "deregulation" of broadcast owners

>>I recall someone here saying the FCC was the "expert agency" composed of
>>"professional regulators" who had looked at the arguments and "made the
>>right
>>choice". Or words to that effect, anyway.

>>Now you tell me the FCC doesn't knwo what they're doing?
>
>>> See MIKEY Powell's enthusiastic support in public.

Guys...
Can you PLEASE be a little less lazy about your editing??
The vast majority of people aren't going to read you stuff
if they have to wade through mess like that below; it's a swamp.
If we want to follow the whole conversation, we can follow
the thread. In the mean time, please cut out everything except
that to which you are specifically responding.
It really isn't hard at all.
Thanks.

Certainly note required to read the posts, but it does make one curious
to see Handi-talkie auctions in a dx group. So I read it. And I didn't
read, bur saw them again in other groups

>
>>All I ever asked was that they put an FA: on

The same person that allows you to get sooooo indignant that I would
comment on your posting FA:'s on non sale oriented newsgroups.

> where that ham operator has been active for many years, is not spam.

Not that I'd ever think of reporting you, but frequency of posting and
participation is not the basis of determining if a post is appropriate
or not.

Why do those that sell on Ebay get so indignant when someone points out
that they are doing something they perhaps shouldn't? There are plenty
of for sale newsgroups, ones designed specifically for hams. Some of
those groups are designed specifically for buying and selling. This
isn't something new. Discussions aren't for sales groups, and selling
ad's aren't for topic discussion groups.

And...If you don't like me posting about your posting FA stuff to
inappropriate newsgroups, you don't have to read them. Goes both ways, sir.

> Regardless, since the auctions are over and I'm (thankfully, springs to mind
> here after reading your comments) out of ham radio, I can guarantee I will

A search of the FCC's website shows no such regulation (from 97.1 thru
97.527 only). The regulation that pertains to permissible transmitter power
in the Amateur Radio service is 97.313. With certain exceptions, the
maximum is 1.5kW output.

Also specifically, rules in the Citizens Radio service prohibits the
addition of external amplifiers (95.411) and prohibits CB transmitters from
being modified to produce more than 4W on AM or 12 PEP on SSB (95.607).

Bryan

| table lamps, toasters, TV sets and such...

Yes, but conduit and BX wiring will cost more than an eqivilent length
of coax or fiber ... right? I don't see any shielding as happening --
if any sort of shielding is required, it'll just be cheaper to use
something other than BPL.

I would like to think so, but...

Do you also have an amateur license?

Just kidding - that only matters here on RRAP, not at club meetings.

They've managed to combine "Missiles of October," and "October Sky."
Maybe one day they'll launch an Estes rocket and attain the altitude
of 1,200' AGL.

> Well, time to celebrate the 4th coming up...and to worship at the

When it's all said and done the best piece of goofy nonsense is that
you're (allegedly) dumping your entire ham station (two HTs, matched
pair, his and her's last I heard) and are quitting ham radio.

"Upgrades" are where we find 'em around here . . .

'BYE and don't let the door . . .

What should be done with Twistedhed once he is brought to justice? [14 votes total]

Fined by FCC. (1) 7%
Flogged. (2) 14%
Banned from rec.radio.cb (1) 7%
Made to pay restitution to hams. (1) 7%
Psychological treatment. (1) 7%
Dismissed with a warning. (1) 7%
I like Twistedhed. He should remain free. (5) 36%
Nothing. (2) 14%

I dont care if you like Twistedhed he's going to get caught and he's going to face the music and thats the way it is.

For one thing, you MIGHT learn something new. :-)

Just think...you could then be the Informed Guru preaching to the masses in r.r.a.p. all about how they should act, do, perform, etc.

But...all you really seem to want to do in here is do lengthy arguments for the sake of arguments' sake. :-)

Sorry, Jimmie, but you are wasting lots of folks' time...

Now go back to orbit and tell us all about SPACE and your intimate knowledge of the aerospace industry, etc. That's a regular feature in here and your sidekicks don't want to miss a single minute of it...

Good luck on your new job as a traveling salesman.

LenAnderson@ieee.org

>
>Tell us how those who land on Mars would deal with the cold, wind, and dust.

Use morse? :-)

>Most of all tell us what it would all cost, and what we would do that could
not
>be done by robots.

I'm curious as to how the "Buro" would handle those interplanetary QSLs!

:-)

Gee...it's so nice with this private little chat room for extra morsemen
and finding out How The Space Boys Do It! So interesting hearing from
the mighty space biz insiders...nothing dull and uninformative like ham
radio policy and hearing how morse is the ultimate mode for all space
communications, getting through when nothing else willllllll......

You guys have wayyyyyyy too much imagination or have a very good
stash of high-grade powder...

First, get a life. Second, without knowing the total amount of people taking
the survey, 90% means nothing.

Unless that incidental RF radiation interferes with other licensed radio services, then the FCC can shut it down. Part 15 devices have no protection, even if within the allowable limits of radiation.

My buddies did not give me a test, the FCC did. I sat in front of an FCC examiner at the FCC field office and took my test (before there ever was a such a thing as a question pool with answers), which had questions that would leave you guessing for the rest of your life. I had my degree before taking the test. And yes, I have a call sign, more than you can say. As far as being an overnight EE, just listen to the cb band, as soon as a cber manages to master the skill of being able to turn the rig on and off he is now an "expert" (ex=has been, spert=drip under pressure) on radios, knows all about them thar "swrs", even "negative swrs", flat side antenners, leanyars, goofy noise toys, the correct coax length, big radios and all that thar good stuff...hey thar ten far gud buddy?

> I think it's too bad that Dwight is getting out of Ham radio.

Is he REALLY...?!?!

I know this will be a dead and forgotten subject by then, but his current license expires in 2008. I bet he renews it.

Furthermore, if he's REALLY trying to make a statement, let's keep an eye on QRZ. I say if he has a "point" to make, he writes "CANCEL" across the front of it and sends it back to Gettysburg.

I say he DOESN'T do THAT.

That's the nice thing about an Amateur Radio license...even if it doesn't fit your needs or interests "for now", you can keep it in your pocket and you have it if you need/want it.

Some grandstand play about "I'm getting out of Ham Radio" is just that...grandstanding. I wonder what the REAL underlying reason is...

255. McDonalds Ham Discount?

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-06 20:10:36 UTC
From: Kenny Joe <ala@alacornkrib.org>
Message-ID: <ccf0ug$e8u$0@pita.alt.net>
Source record: 93827

So here I was, at McDonalds this morning and the clerk says to me, "Are you a senior or a ham"? I say neither but why do you ask? So the clerk says we give discounts to seniors and hams, 10% off for seniors and 20% off for hams. Feeling somewhat miffed, I tell the clerk I am a CB op and what is the discount for a CB op? She says, "No discount for CB ops." Now I am really miffed and cant unnerstand why I dont get some sort of discount. Worse yet, the manager will not tell me why hams get 20% discount! Life is just so unfair! Worse yet, I go for a 2nd cup of Joe, and now the clerk rubs it in and says, "If you are a senior AND a ham, you would get a 30% discount."
Now that Really burns me up, so I stomp out of McDonalds, swearing never to darken their doors again. But here's the real zinger! I still don't know why hams get 20% off and senior hams get 30% off?

Kenny Joe
Purveyor of Fine Corn & coarse grits.

Amateur Radio Newsline™ Report 1403 – July 2, 2004

Amateur Radio Newsline report number 1403 with a release date of
Friday, July 2, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The score is now Ham Radio one, BPL zero; OSCAR Echo is alive, and business is
good for CW.

Find out the details on Amateur Radio Newsline report number 1403 coming your
way right now.

**

BPL: SCORE ONE FOR THE GOOD GUYS

A major broadband-over-power line pilot test by Alliant Energy in Cedar Rapids,
Iowa is shut
down after local hams document the harmful interference and the Federal
Communications
Commission gets a formal complaint from the A-R-R-L. We get the details from
Amateur Radio
Newsline's Mark Abramowicz NT3V:

****

It took nearly three months to accomplish the mission, but amateurs in Cedar
Rapids - armed
with ample data and the muscle of the American Radio Relay League - convinced
Alliant to
prematurely halt their B-P-L test.

Jim Spencer, W0SR, first discovered the interference on his HF radio right
after Alliant
launched its B-P-L testing March 30.

Spencer, who quickly mobilized other Cedar Rapids hams to form a technical
committee,
says the interference was so severe that it wiped out his and others' ability
to use
their radios.

Spencer says the group worked with Alliant officials to try to resolve the
interference
and conducted several test measurements with the utility's cooperation.

Spencer tells Amateur Radio Newsline the group appealed to Alliant to shut down the system and stop the interference on several occasions. But it was clear the B-P-L industry was telling Alliant's managers something else.

"There's a lot of regulatory uncertainty here," Spencer explains. "And that what the hams were calling harmful interference - in my case S-9 signals, you know, every 1-plus kilohertz across the band, they were being told that wasn't really harmful.''

Spencer says communications between his technical group and Alliant officials were civil, but they accomplished little action. He says he and others filed complaints with the FCC.

"I think in 21 communications I received one simple response basically told me to go back to the power company - the operator of the system," Spencer says. "And, of course, I had done that all the time. So, we had been asking the utility company to close it down, we had been asking the FCC to help us and then the ARRL went and escalated that."

Wade Walstrom, W0EJ, is the ARRL's Midwest Division Director. He says the league's FCC complaint finally got the utility's attention.

"The thrust of the complaint was that they were now aware that the system was causing interference and didn't shut the system off so now that makes it willful interference," Walstrom said...

Alliant stopped the B-P-L pilot test on June 25 saying it had gathered the necessary data to make a determination on whether a general rollout of B-P-L would be worth pursuing, according to Spencer. He says Alliant's project leader told him the ARRL's FCC complaint was just one factor in the company's decision.

"Obviously we're happy, but we didn't feel like we had won," Spencer said. "We felt like this was a technical problem and that we tried to communicate some of the technical parameters to them and that they'd made a good business decision."

Spencer says an Alliant representative told him the company has no plans to pursue B-P-L at this time.

"In order to distribute it out to a sparsely-populated rural area with all the equipment it would take, it's not clear that this thing makes economic sense," Spencer says. "And that this really can meet the goals of the rural user which is
one of the things that people touted."

The ARRL's Walstrom is cautiously optimistic Alliant's decision might have a ripple
effect.

"We would hope that other utilities or other organizations that were looking to

possibly use B-P-L as a source of revenue will look and see the decision that Alliant
has made and re-think their own plans and hopefully decide that maybe there are other
ways to provide broadband internet connections to the population as a whole," Walstrom says.

Walstrom says the Cedar Rapids group led by Spencer has set a precedent.

"All the proof on how well it's going to work isn't there yet," Walstrom says.

"And the proof that we have established here in Cedar Rapids and is coming out from other parts of the country is that it's not an interference-free system by

any means and in fact it causes a lot of interference and we've documented that here."

Spencer says his committee, consisting of a group of engineers - most of them retired from Rockwell Collins - stuck strictly to technical evidence in communications
with Alliant. But he says its clear B-P-L has taken on a very political tone.

"Obviously the problem has got a lot of political implications, but the thing that
hams can do is remain professional and keep it primarily on a technical level," Spencer says.

The ARRL's Walstrom says if he could stand before the FCC panel to make his case,
he would strongly urge the commissioners to postpone action on or even walk away from B-P-L.

"I think they need to delay it until they're satisfied that they're able to mitigate any
interference problems at all and by mitigate from an amateur radio standpoint that really
means eliminate," Walstrom says.

Spencer adds, there are no hard feelings toward Alliant. Spencer says he and members of
his technical group still have a good, working relationship with the utility.

"We've had quite a bit of communication back and forth through this whole thing," Spencer
says. "I mean I've had many, many e-mails and some phone calls and I would say that it
was pretty positive and still is."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

****

In addition to operations in Cedar Rapids, Alliant also provides utility services to
customers in sections of Minnesota and Wisconsin, and a small strip of northwestern Illinois

(W0SR, ARRL)

**

HAM RADIO IN SPACE: ECHO IS UP AND RUNNING

The newest Amateur Radio satellite is now in orbit and doing fine. Chuck Green, N0ADI,
reported by phone from the Baikonur Cosmodrome that the launch of AMSAT Echo and the
other satellites occurred on time on June 29th at 0630 UTC. He watched the rocket climb
out and said it appeared to be flying straight and true. A second phone call from Chuck
18 minutes later confirmed that the launch carrying AMSAT OSCAR Echo was successful and
that all spacecraft had separated successfully.

Chuck was assisted in the final integration and checkout process at Baikonur by the team
from SpaceQuest which included Dr. Dino Lorenzini KC4YMG, Mark Kanawati N4TPY, and Lyle
Johnson KK7P. The SpaceQuest team members are also AMSAT members and volunteers.

First contact with Echo was at 1452 UTC on June 29th. After collecting a bit of TLM the
435.150 MHz transmitter was turned off at 1500 UTC. The preliminary keps were observed
to be pretty close. The first look at Echo’s telemetry shows things are looking good.
The battery was fully charged and the panels were delivering about 950 ma, which is fine.
The panels were supporting the transmitter power adequately at about 2.3W output. The
bird appeared to be tumbling as expected. Internal temperatures are around 10 degrees
Celsius which is also as expected.

On the second pass the loading of software began and good progress was made.

Telemetry continues to look very good. While fades clearly indicated Echo continues to
tumble (as expected), at 2.2 Watts output good bits were received without difficulty.
Rather than turn the transmitter off at the end of that pass, based on a very good
looking power system, the power was turned down to about 0.3 Watts.

The hour between passes was spent closely examining the captured telemetry and comparing
it to pre-launch testing, as well as tweaking the keps a bit.

During the second set of passes approximately twelve hours later, the command team
finished loading the housekeeping software. The housekeeping task is up and running
as of June 30th at 0525 UTC. With more data available on the power systems performance
the transmitter has now been left at about 1.2W.

The morning passes on June 30th concentrated on gathering telemetry. The evening passes
continued with checkout activities.

A telemetry decode program, TLMEcho, is available for those who would like to view and
report data from Echo. It may be downloaded from AMSAT.ORG in the Echo project area,
http://www.amsat.org/amsat-new/echo/

If you record telemetry please send the CSV files to ke4azn@amsat.org.

Please do not transmit to Echo until checkout and commissioning has been completed and
the satellite is made available for general use. Unexpected uplinks may cause delays
in verifying the proper operation of ECHO and delay the opening of the transponders to
general use.

(AMSAT, WD0E)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin
stations around the world including the N7SKO repeater serving Arizona, California and Nevada.

**

WITH NEWSLINE: SEND US YOUR ID - PLEASE

Would you like to ID your own repeater or bulletin station here on Amateur Radio
Newsline? Well here is how you can do it. Record the following sentence and include
the call sign and location you want to honor.

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin
stations around the world including the xxx repeater serving yyy zzz. The xxx is the
call sign. The yyy and zzz are the city and state.

Then, take the tape and mail it to Amateur Radio Newsline, Editorial Office, 28197
Robin Avenue, Santa Clarita, California, 91350. As time permits, we will select an
audio I-D and include it in the newscast.

All tapes submitted become the property of the Amateur Radio Newsline and cannot be
returned. Again, the address to make yourself a part of this bulletin service is
Amateur Radio Newsline, Editorial Office, 28197 Robin Avenue, Santa Clarita,
California, 91350.

**

RESCUE RADIO: VA HOSPITALS SAY YES TO HAM RADIO

Hospitals in Roanoke, Virginia, will soon be ham radio equipped. Mike Knight, K4IJ,
reports through the Repeater Journal that a budget of twenty-five thousand dollars has
been approved for the installation of Amateur stations at between ten and twelve primary
healthcare facilities in the Roanoke area.

Knight says that the system will include a dual band base radio, a mobile radio, a power
supply, antennas and full lightning protection at each hospital. Also going on-line will
be a pair of commercial grade FM voice repeaters with back-up generators, and a dedicated
digital repeater. The voice systems will have IRLP and Echolink tie-ins to communicate
outside the local area.

When completed, the Roanoke system will consist of five to six linked repeaters. The
base stations will be connected to each hospitals emergency power system to keep them on the air.

(Repeater Journal)

**

RADIO LAW: COURT SAYS NO TO EXPANDED MEDIA OWNERSHIP

A U.S. Court of Appeals in Philadelphia has thrown out most of the Federal Communications
Commission's new and controversial media ownership deregulation. Its Thursday, June 24th
decision means that for the time being, ownership levels of broadcast properties and
related media will remain at current levels.

Back on June 2nd of 2003, the FCC's Republican majority voted to dramatically ease a
prohibition barring daily newspapers from buying broadcast stations in their markets.
The agency lifted caps limiting how many radio and TV stations a broadcaster could own
in the same area.

But in its 2 to 1 decision the Philadelphia court said that while some relaxation of the
ownership limits might be reasonable, the agency had failed to adequately justify the
limits it had put in place. The court announced that its original stay on the FCC's media
ownership deregulation would continue until the agency fixes the regulations to the court's
liking.

(TV Week)

**

ENFORCEMENT: TOO MUCH MORSE CODE

The FCC is asking a Missouri ham why he is running a Morse code training program smack in
the middle of the 40 meter band. The target of the inquiry is Paul D. Westcott, KC0OAB of
Purdy who apparently has code practice on the air around the clock.

Its June 21st letter to Westcott notes that the agency had previously discussed this matter
with KC0OAB and was given assurances that the transmissions he was making were for Morse
Code practice. Since that time the agency has received another complaint which alleges
that the purported 40 meter code practice transmissions are 24 hours a day, seven days per
week. The FCC says that due to the crowded nature of the 40 Meter Band, it is extremely

inconsiderate to take up spectrum in that area for transmissions 24 hours a day. This,
even if it is purportedly for “code practice” purposes.

The agency has posed several questions to Westcott to explain his operation and was given
20 days from the date of the FCC letter to provide a very detailed response.

**

ENFORCEMENT: NO LICENSE - DON’T OPERATE

The town of Reseda, California, is only about 10 miles from the Newsline studio. It’s
also the place where the FCC alleges that someone has been operating a ham radio transmitter
without the benefit of being a licensed ham.

In a letter to a resident identified as Joseph A. Mosbergen, the FCC says that he or someone
in his residence has been operating radio-transmitting equipment on several Los Angeles area
Two Meter Amateur Radio repeaters. The agency warns Mosbergen that this is a violation of
it rules and will subject him or whoever is proven to be operating to punitive action.
This could include a fine or imprisonment, as well as seizure of any non-certified radio
transmitting equipment. It also tells Mosbergern that this is the last warning that he
will receive.

**

HAM RADIO BUSINESS: HEIL TO MARKET CLEAR SPEECH SPEAKER

Turning to the ham radio business scene, word that the NCT Group has appointed Heil Sound
Limited as its prime worldwide manufacturer and distributor of the Clear Speech Speaker
system. Under the terms of the deal, Heil Sound will distribute Clear Speech speakers to
their present amateur radio dealers and commercial broadcast distributors. Also, the
Clear Speech speaker will be improved and several new products will be brought to the market
using the NCT Group technologies. According to Heil Sound these new product models are in
development and will be available for market by the end of July. More is on line at
www.heilsound.com

**

COMMUNICATIOS NEWS: DUAL-CORE PROCESSORS ON THE WAY

Tech News reports that Advanced Micro Devices plans to begin selling microchips with
the equivalent of two microprocessors in one next year. The Sunnyvale, California based
company said it plans to offer dual-core processors for data-serving business computers
in the middle of next year, and for high-end home computers in the second half of next year.

Dual-core technology combines the power of two processors in one package. This permits
the creation of a more powerful computer and increased computation power when multitasking.

Last month, Intel said it would bring dual-core chips to the marketplace in 2005. That’s
more than a year ahead of schedule.

**

HAM RADIO BUSINESS: CW IS GOING STRONG

If you think Morse code is on its way out, the ham radio business community probably
disagrees with you. At least that’s the impression one gets thumbing through the articles
in the July issue of CQ Magazine.

Not only are the ads for Morse related products holding steady, but the new products area
has some reviews of the latest CW related products. And not to be outdone, Dave Ingram,
K4TWJ, devotes his World of Ideas column to Morse Keys from around the world.

If you are a Morse lover, this is the CQ edition for you. It’s on your newsstand now.
More information is on the web at www.cq-amateur-radio.com.

**

THE SOCIAL SCENE: COME TO THE TENNESSEE HAM BREAKFAST

On the ham radio social scene, the Middle Tennessee Ham Breakfast takes place at the
famed Tennessean Truckstop on the second Saturday of every month. People begin to
gather there at about 9 a.m. and it’s billed as a chance to meet the middle Tennessee
hams you may have contacted on the air.

Interested in attending? For full information simply send a note to kenbreed@surfmore.net
or call Ken, AI4DV at area code 931 – 424 – 9523 during normal business

hours.

(Do Not Read: Repeater Journal)

**

THE SOCIAL SCENE: ROANOKE VA. IN JULY

And still in the South, mark down July 31st to attend the annual Roanoke Hamfest.
This event is sponsored by the Roanoke Valley Amateur Radio Club and will be held at
William Byrd High School in Vinton, Virginia starting at 8 a.m. local time. Full
information on this friendly event is on line at w4ca.host4www.com

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America,
We are the Amateur Radio Newsline with links to the world from our only official
website at www.arnewsline.org and being relayed by the volunteer services of the
following radio amateur:

**

COLOR TV IS CELEBRATING ITS 50TH ANNIVERSARY THIS YEAR

Now for a bit of a history lesson. Although color TV transmissions were in the

development stages many years earlier, the broadcast industry is celebrating its
half century mark this year. This is because it was 50 years ago that color broadcasts
were initially
made available to the public.

Now, National Public Radio has posted a story and some interesting historical resources
at its website. It is very interesting reading. That URL is in this week’s printed
Amateur Radio Newsline report.

(www.npr.org/features/feature.php?wfId=1789944 (CGC))

**

EMERGING TECHNOLOGY: NEW DVD PLAYER FILTERS OUT BAD WORDS

Wal-Mart is selling the world's first DVD player that can seamlessly skip over violence,

swearing, nudity and other potentially offensive movie content. The $79 unit features
technology by ClearPlay and is manufactured by Thomson Inc. under its RCA brand.

The DVD player is the latest development in a legal battle between the Salt Lake City-based
software company and Hollywood. Members of the Directors Guild of America filed suit
against ClearPlay in September 2002, when the filtering product was available as a
computer program claiming it impinges on intellectual and creative rights. Those legal
proceedings are still under way in Colorado's 10th District Court. Both sides currently
are waiting for a ruling on a summary judgment filed by ClearPlay.

**

WORLDBEAT - SLOVAKIA: FIRST CELLPHONE VIRUS ANNOUNCED

On the international scene word that a group of underground virus writers have announced
what is believed to be the world's first worm that can spread on advanced mobile phones.
According to news reports, the worm named Cabir, was sent to security software firms in
the United States and Russia by a member of 29a.

29a is described as a group of virus writers from the Czech Republic and Slovakia who
pride themselves in creating proof of concept malicious viruses. Thankfully, Cabir has
been found to have no damaging code attached that might destroy files or execute other
harmful operations.

**

WORLDBEAT – UK: RSGB QSL BUREAU CHANGE

On a more positive note, word that Marc Litchman, G0TOC is the new RSGB QSL Bureau
Sub-Manager for the G7AAA through G7ZZZ series of callsigns. Litchman can be reached at
26 Oak Tree Close, Loughton, Essex IG10 2RE, in the U-K.

**

WORLDBEAT – NEW ZEALAND: ZL1AN HONORED FOR EDUCATIONAL WORK

And a word of congratulations to New Zealand’s Dr. Gary Bold, ZL1AN. Bold is a physics
lecturer at the University of Auckland and he has been awarded the Prime

Ministers
Supreme Prize based in part on his 43 years of dedication to teaching.

Bold has taught every course in the physics department, all courses in geophysics signal
processing and network theory. He has also devised and revised experiments and designed
the curriculum for many second and third year physics courses. A dedicated C-W enthusiast,
in his spare time he writes the NZART Break-In Magazine column "The Morseman."

The presentation was made at the recent 2004 Tertiary Teaching Excellence Awards.
ZL1AN was one of 12 academics from nine institutions presented with awards, each of which
brings with it a $30,000 prize.

**

DX

In D-X, word that several O-H prefix operators will be operational from Aland Island as
OH0I during the CQ Magazine and RTTY Journal RTTY DX Contest. This, from September 25th
to the 26th. They will operate as a Multi class 2 entry using multiple beams and vertical arrays on the low bands. QSL via OH3BHL.

And keep an ear open in September for RA3AMG from Cyprus. He will also be active in the
same contest signing P3B. QSL via his home callsign.

Lastly, ST2DX will be active from the Sudan until the 10th of July. Look for him mainly
on SSB, with some CW, on all bands between 30 and 6 meters. QSL this one as directed on the air.

**

THAT FINAL ITEM – HAMMIN’ OLDIES ON WBCQ

And finally this week… who says hams and short wave listeners are nothing but a bunch of
stuffy old geezers?

The Peacock Project is a group of Internet broadcasters that have banded together to
present a variety of music eras, styles and talk over WBCQ on Saturday nights at 8PM
Eastern time, which is Midnight Universal Time, Sunday. Named in tribute to one of their
group, Rob Peacock, who suddenly passed away in January, the show features a different
host each week with a program that is unique to his own musical preference and

personal
presentation.

The first weekend of every month will feature Dave Kirby's look back at
Old Time
Radio and some non-English language versions of American songs. The second
weekend is
The Voice of Savage Henry, a 1960's and 70's "Garage Band" rock show hosted by
Steve Evanchuck,
KG8KO. Tim Gaynor is heard directly from Australia on the 3rd week and the 4th
week is S
teve Coletti, aka “Big Steve Cole”. Four times a year there is a 5th
Saturday to the month
and on those weekends it is time for "Hollow-State Hound", a show scheduled to
feature
big band music with Mike "The DX Hound".

The broadcasters got together in an odd way, and going on WBCQ's 7415
kHz frequency
is like going home to where it all started. A few years ago there was a group
of ham radio
operators who were also listeners to shortwave broadcasters and utility
stations. Under the
umbrella organization of the Association Of North American Radio Clubs,
(ANARC), they would
join into a ham traffic net every Sunday morning on 7240 kHz to compare their
station
loggings. While the net still has a lot of good memories for those who joined
in or only
listened in, the group eventually disbanded. The net then moved to an Internet
Relay
Chat channel that was already in existence.
To a few die hard members like Dave Kirby, N1DK, the discontinuance of
the radio
net was only a minor setback. Dave began doing weekly reports by way of the
Cyber
Shortwave real audio file that was available for download by anyone. It was at
the suggestion
of member Pete Costello that Dave began doing his presentations as a live
interactive program
by way of sending sound via live365.com and receiving typed comments back from
listeners via
the IRC chat channel.

As loggings and SWL news tapered off, Dave began doing more music and
off topic bantering.
This led the powers that be at the chat room to ask Dave to create his own chat
room for the show.
The kick in the butt turned out to be a blessing as now the door was opened for
others who wanted
to do interactive radio using Dave's chat room

We hope that you will enjoy the diversity of programming that these enterprising hams and
SWLs have created. The Peacock Project begins July 3rd on WBCQ at 7415 kHz and your fellow
broadcasters, hams and SWLs at the Amateur Radio Newsline wish you the best.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the
Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all
from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org.
More information is available at Amateur Radio Newsline's(tm) only official website located at
www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm),
P.O. Box 660937, Arcadia, California 91066.

Bill Pasternak, WA6ITF, is away on vacation this week, so with Mark Abramowicz, N-T-3-V, as
my partner this week, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening."

You're voluntarily offering to relinquish your long-established position
to a mere radio amateur?

Welp, if they were available, I'd use them too. Some kind of
fanatical rabid love of code develops after drinking from the Chalice
of Morse.

> >> They care more about their "honor" in telling fibs of their exploits

> about the space program, national economics, traveling salesmen,
> the educational system, and other assorted "ham interest" items?

And arguing with CBers. They impress people wherever they go. If
they don't immediately get the attention they think they deserve, they
thump their chests a few times to make their "achievements" more
visible. I really do wish the FCC would issue some kind of combat
infantry badge to these guys.

Sad to think that the spirit of exploration is just about dead. Sad to
think that a bunch of nerds sitting around in a room guiding robots are
what pass for adventurers these days.

I don't think it's dead at all, Mike.

And it wasn't the spirit of exploration that sent people to the moon. It was
the need to show the Rooskies that we could do better than they could.

Spirit of exploration is great but bankrolling it with trillions of taxpayer
dollars is a hard sell when people see the middle class being eroded at every
turn...

>Sad to
>think that a bunch of nerds sitting around in a room guiding robots are
>what pass for adventurers these days.

Sadder to think that such triumphs of engineering are dismissed so easily.

I bet if you asked for volunteers to go on a manned Mars mission, 3 years long,
with all sorts of risks and discomforts, the response would be so overwhelming
that you'd need a major budget item just to deal with it. Even more so for a
lunar mission. Heck, if you asked for volunteers to go to the Moon on a
permanent basis (as in "we don't know when or even if there will be space on
a ship to bring you back") there'd be the same flood of volunteers.

>What do you think of the energy density of hydrogen and it's effect on
>trying to convert to hydrogen vehicles?

That energy density is determined by how the hydrogen is stored. Normally it's quite low, but when comressed, quite a bit of hydrogen can be stored in a small space. Same for methane (natural gas). Trouble is, do you want to drive around with a high pressure fuel tank and fuel lines?

One interesting solution is proposed by the same guy who gave us LCDs. His idea (IIRC) is that the hydrogen is stored chemically in metal hydride pellets, which give off hydrogen when warmed by engine waste heat. No high pressure tank.

The big hydrogen question is: where do we get all the hydrogen from?
>

They assume that it always will, thus the FCC can and will shut it down.

The FCC will *not* completely shut it down;
there's too much money involved.
Engineering standards, reality,
"truth, justice and the American Way" don't even come into it.
Remember that, in Washington,
"money makes the world go 'round" and bullsh*t lubricates the gears.
They will just re-write the regulations to accommodate BPL, then
let it die of natural causes after their political contributors
have squeezed as much money out of foolish investors as possible.
That sounds OK, except for one problem: the power companies will use
the new regulations to dismiss complaints about their
continuing power line noise caused by shoddy line work.
The power companies get a "two-fer" (sucker money from BPL
and relief from the FCC hassling them over line noise),
and the pols get bigger contribution checks.
Everyone wins, except us.

Sorry about that, Mike. It was a clear over-reaction to your three (3) messages in this newsgroup about me spamming the newsgroups, mixed with a throbing toothache and not enough sleep the night before because of it. My decision to leave Amateur radio is based solely on personal reasons, including a lack of interest at the moment, other distractions in my life, and so on. As I said elsewhere, it has been fun, but it's time for me to move on. Take care.

>> Access BPL system.
>
>They assume that it always will, thus the FCC can and will shut it down.

There's been the tacit, but erroneous, assumption that the FCC can
control BPL. It does not. All it can do, if the NPRM goes through,
is to recognize it exists and to set levels of incidental RF radiation
from BPL.

Even if there is an over-regulation level of incidental RF radiation, the
FCC is hardly likely to "shut anything down."

The FCC has taken NO action to "shut down" electric power utilities
for producing random RF noise from power lines.

The FCC has taken NO action to "shut down" the manufacture of
those so-called wireless or carrier-current telephone jack devices
even though some radiate beyond Part 15 limits.

The FCC has taken NO action to "shut down" the manufacture of
many different RF-emitting devices ranging from high-efficiency lamp
units to wireless doorbells due to excessive Part 15 radiation.

All the FCC has done is to threaten and, in a few rare cases,
fined individuals (in or out of ham radio) and corporations (notably
in broadcasting) a nominal amount. FCC's Media Bureau and the
"enforcement bureau" recently jumped the levied fine amounts for
broadcasting infractions...but that was largely due to more of the
citizenry accessing the FCC lately and getting angry at them. The
FCC has generally been rather out of touch with the mainstream of
America during most of its 70 year life.

So far, the singular case of the Cedar Rapids Access BPL test site
departure remains the only important event. That largely because
of a concerted effort by local radio amateurs in that city. That group
should be applauded and cheered. But are they?

No. The newsgroup gurus, renowned absolutely correct experts
that they are (according to their prodigious word output), want to
salute the ARRL instead "for keeping up the fight" (in ephemeral
words)...or try to say the gurus were "right all along" because it is
"a failed system that will never succeed." :-)

A few guru growlers simply snarl and point fingers in here, doing nothing outside of the newsgroup, just looking for arguments and a freedom to mean-mouth their "enemies." :-)

Too bad there couldn't have been a true discussion on this topic. Too many old wounds from previous topics are still festering and those wounded feel the League should always triumph.

LHA / WMD

I wouldn't read more into his post than he wrote. The conspiracy
theorists probably think he had a "REAL underlying reason" to get into
the service as well. Pffft.

Well there you have it. The number one reason for leaving amateur
radio is probably death (SK for the pnone impaired). Or maybe it's a
lack of interest.

No nefarious conspiracy theories necessary.

I wonder what the other reasons for people leaving the ARS might be?

bb

It's interesting that one is a Technician and another is a General.

As Kelly/W3RV and Jimmy Who/N2EY would say, "So what's their problem?"
...for not being Extras.

snip

Maybe because he's a General and can't get into the Extra part of the
band?

Maybe because he know's that CW is welcome anywhere in the band?

> Its June 21st letter to Westcott notes that the agency had previously discussed

Heavens no! I love the engineering. But there is a world of difference
between the "adventurers" giving a live press conference from the studio
and adventurers being *there*. If that doesn't make a big difference to
you , I guess it is kind of a "Jeep" thing.

> I bet if you asked for volunteers to go on a manned Mars mission, 3 years long,

> The big hydrogen question is: where do we get all the hydrogen from?

My guess is that it would come from electrolysis at hydropower or more
likely Nuc power plants. Dunno if it would be done at the same sites
where desalinization would (*will*) be happening. (welcome to your
future, California!)

Of course there will be environmental issues, such as what to do with
all the salt. Another biggie is that seawater electrolysis tends to
produce chlorine instead of oxygen:

http://www2.electrochem.org/cgi-bin/abs?mtg=204&abs=0710

Hard to argue that chlorine wouldn't be a pollutant. The anti
environmentalists might even agree on that one!

and using seawater is probably pretty important, because....

Who on earth is going to want to give up their fresh water? The left
coast? Hardly likely! They are the ones that are going to be surviving
on electrolysis in the future. East coast? We're so variable here, and
population is eventually simply going to limit fresh water supplies.

And just as I don't like biofuels, I think that using a substance that
people depend on for their lives like food and water means that some
terrible choices might have to be made in the future.

Put simply, if it isn't seawater, it isn't going to happen.

Not quite the epiphany I had in mind.

According to Yell Yell, nobody, absolutely NO ONE can possibly
know a damn thing about amateur radio without passing a little
test, receiving the nice piece of paper with a fancy border (suitable
for framing), and then coming on like a Dill Instructor with a mouth
full of pickle.

Apparently, one gets a Full Knowledge (or something like that) on
receiving that call sign. Perhaps a subtle divine voice from on high

that imparts all the smarts on hum raddio to the fully licensed?

Poor guy can't separate the reality from his murine fantasy of the
"amateur corps."

>> "The chalice with the keyer has the brew that is true,
>> the chalice with the mike has the brew that is peew!"
>>
>> - from the motion picture "The Morse Jester" starring Danny Kode.
>
>Danny Kode was superb. Alas, they are making color movies today.

Morse is colorless. It fits. Morse is 160 years old. Didn't even
have motion pictures back in 1844.

But, according to Yell Yell and his kin, ALL amateurs MUST know
morse to gain "the true knowledge" on passing the Test. For a hobby
activity.

There's lots of ANGER floating around the newsgripe...yelling and
yelling at those who didn't do EXACTLY like the Kodies did or
embrace "the service" like it was a murine corps.

Output from the Yell Yell is typical of the kind of responses by
the jaded regulars in here, most of whom see some kind of
need to yell and yell. Yell Yell made it a CONSPIRACY!

Dwight wanted to sell some ham equipment. All he got in here
from most (possible exception of Mike Coslo) was a lot of
personal trashing commentary. Dumb. Doesn't reflect good on
"the service." :-(

I hope that Stewart gets some good prices on his used gear.

Those snarled-at "left coast" people designed the first stage
rockets for Apollo. The "left coast" people designed the SSMEs
that push shuttle.

>Hardly likely! They are the ones that are going to be surviving
>on electrolysis in the future.

"Left coast" people are getting electrolysis treatments to remove
unwanted hair? I think not.

Try removing the internal hair and the left-brain, right-brain
thinking when talking about the coastal regions of the UNITED
States of America.

Washington, Oregon, and northern California have plentiful water.

>East coast? We're so variable here, and
>population is eventually simply going to limit fresh water supplies.

What has that got to do with amateur radio policy?

Note: The FCC does NOT regulate water.

BPL = Broadband over Power Lines, NOT over water lines.

Are you one of those dihydrogen monoxide extremists?

Take that to the dihydrogen monoxide conspiracy newsgroup.

Leave the space business stuff to the industry experts, like those
two who have already pontificated aplenty on How To Do Space
without having any space biz experience. :-)

LenAnderson@ieee.org

308. WX Receivers and Repeaters retransmitting non-weather alerts.

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-08 05:07:37 UTC
From: "D. Stussy" <kd6lvw@bde-arc.ampr.org>
Message-ID: <Pine.LNX.4.60.0407060412330.60@kd6lvw.ampr.org>
Source record: 93934

From the CAT Automation web site forum regarding their WX-200 product:

Posted: June 29 2004,22:49

I posed a question to the FCC official, William Cross, who is the Amateur Radio Q&A man at the /wireless.fcc.gov/services/amateur page. My question was in regards to part 97 and the legality of retransmitting NWS audio for different alerts and notices over amateur radio.

I got a very quick, courteous, and detailed response. To summarize his response, a rule violation occurs when alerts and announcements (NWS audio) are retransmitted over amateur radio that are not weather related.

I found it interesting that his reply was copied to Mr. Riley Hollingsworth.

Non-weather related alerts and notices include many important warnings. Flash flood, nuclear power plant, radiological are non-weather warnings that are applicable to my location.

I had mentioned the public service duty of amateur radio in regards to the non-weather alerts. His answer was the same.

I was told that it's OK to convey the information contained in the non-weather related alerts, provided you don't use the NWS audio. One way to accomplish that would be to disable the voice announcements and let the WX200 verbally announce the alert condition.

I would be very wary of allowing repeater users to activate the receiver and retransmit the NWS audio over an amateur repeater. If any non-weather announcement was in progress then a rules violation could occur.

I programmed my controller to only allow the receiver to be user activated during a covered severe weather warning. During those times the NWS audio typicaly consists of weather information only. When the warning is over the user macros controlling the receiver are automaticly disabled.

John Pixley, AB0VX

My comments:

I don't know about the rest of you but I find this answer very confusing. Many of these other alerts (e.g. "CAE - aka 'Amber Alerts'", "911 Outage", etc.) are of the type of communications called "emergency communications" covered by either 47 CFR 97.401 or .403. Furthermore, it is likely that under the new "EAS" subsystem that uses NWS transmitters, the very "communications outage" declaration that the FCC wishes to notify the public (and the amateur community) of per .401(c) - for which allows us amateurs to then step in CAN'T

be relayed via amateur radio!

47 CFR 97.205(c) indicates that a repeater MAY be automatically controlled. 47 CFR 97.111(b)(4) and (6) authorize one-way transmissions for emergency communications and information bulletins. 47 CFR 97.113(e) permits weather related transmissions from U.S. Government stations [on a non-regular or non-continuous basis], but apparently not non-weather. However, the only non-weather transmissions would be under "EAS," so why would those not be permitted considering the override of subsections .401 ff.?

I.e. If the "widest possible transmission" of some of these non-weather related events, especially an "Amber Alert," is what is desired, then why does the FCC FORBID such under their interpretation of the rules, where an equally valid interpretation (placing "Safety of life" - .403 in a superior position) would then permit it?

Has the FCC said that "Amber Alerts" (and other non-weather related EAS messages) are NOT in the public interest for amateurs to retransmit automatically?

Even that seems to contradict earlier rulings, like 93-17, where the FCC did find that it was in the public interest for an amateur transceiver to incidentally be able to pick up public safety frequencies

If the content of the warning is to reach the greatest number of people in the shortest period of time, even a "verbatim retransmission" by an amateur station NOT using the NWS audio of information heard from there could be an unjustified delay that costs a life.

It will depend on the club and their bylaws.

In the clubs I belong to, one must either possess a valid amateur radio license or, for one of them, be an immediate family member of a licensee (usually a spouse or child) who is himself a member, in order to be a MEMBER of the club. Unlicensed guests of all sorts are welcome to attend meetings and such for the purpose of deciding if they want to get a license.

Don't encourage SPAMLINE by posting replies here. Remember that the newsgroup hierarchy guidelines state that "ARN" has been given permission to post on "rec.radio.info" and "rec.radio.amateur.misc" - but "rec.radio.amateur.policy" isn't among the list of places they should be posting their "news" (which for stories local to Southern California is often more so political CRAP than truth). They can't even figure out that MIME encoding is WRONG for usenet.

Translation: Len wants us to shut up. Next step is him calling us "feldwebels"

Of course, Len has no amateur radio experience, but he wants to pontificate to
us about How It Should Be in amateur radio.

But when you ask him how to fight the BPL meance, he has no new ideas at all.

Most of all, note that Len tells us to

"Leave the space business stuff to the industry experts"

Shouldn't we do the same with BPL?

That would require a lot of generating capacity. Does it exist, or would new
plants have to be built?

And if the source of hydrogen is electricity, why not simply build electric
cars and use the electricity to charge the batteries? Or electric transit? It
is my understanding that LA's "Blue Line" is an enormous success.

>Of course there will be environmental issues, such as what to do with

You'd have to desalinate first, then electrolyze, then compress and
regfrigerate. How efficient is all that?

> and using seawater is probably pretty important, because....

>Who on earth is going to want to give up their fresh water? The left
>coast? Hardly likely! They are the ones that are going to be surviving
>on electrolysis in the future. East coast? We're so variable here, and
>population is eventually simply going to limit fresh water supplies.

What it all comes down to is living in accordance with Nature. That doesn't
mean we must all go back to an agrarian life. What it does mean is that
unsustainable growth and increases in consumption will have dire effects if not
corrected.

Expecting to have lush green lawns and big swimming pools. *and* a huge
population, in a semi-arid region isn't realistic. Etc.

>And just as I don't like biofuels, I think that using a substance that
>people depend on for their lives like food and water means that some
>terrible choices might have to be made in the future.

The trick with biofuel is to use waste products to make it. For example,
there's a turkey processing plant in the midwest that generates about 200
tons of turkey waste per *day*. A TDP plant was recently built that allegedly
processes the waste into fuel. What used to be a disposal problem is now an
energy source, according to reports.

>Put simply, if it isn't seawater, it isn't going to happen.

The thing to do is to work on the problem from all angles. There's no one magic solution.

Who's snarling? People need water, and yer going to run out sometime,
unless the water sources decide to keep up with population growth. Since
it's unlikely that the present sources are going to expand, that leaves
desalinization. And in the content of what I'm talking about with Jim,
it isn't likely that the left coast is not going to want to give up
whatever fresh water they have.

> This is for a 10-year license.

Doing the math, that comes out to about $2.08
per year, or 0.0057 CENTS per-day over the
course of a 10-Year period...........

How much do you wanna bet however that the
average traditionally el-cheapo ham radio operator
will piss-and-moan like a stuck pig over a 0.0057
Cent-per-day fee...??? (my guess is alot will !)

For example, I was selling at a hamfest in Pa last
month. Had a shoebox full of miniature tubes for
$1.00 each. A real bargain considering tubes are
going for much more on e-Bay. This putz comes
walking up, digs thru the box for 2 minutes and pulls
out *one* tube and wants it for 35 cents. I was willing
to let it go for 75 cents but he wants it for 35 cents.
No deal. He puts it back (tosses it) and gets all
smart-ass saying "you'll sell it to me later for 35 Cents."
The schmuck comes back 1/2 hour later digs it out
and asks for it for 35 Cents again. I say OK, offer to
wrap it, he hands it to me and while he's reachin for his
35 cents, I dropped the tube on the ground and smashed
it with my trusty Nike, then told him I changed my mind
and wanted $1.00 for it. This putz goes completely nuts saying
he's looked all over 4 hamfests for this tube and he
couldn't believe I smashed it. Jumpin up and down like a looney
and me quietly hoping he would have a stroke right there
as he must have weighed 300 pounds. A real "Eddie Slobbo"
fer sure - baaaaaa hahahahah!! I just laughed and offered
him a pleasant balance of the afternoon.

After he left the dealers either side of me were almost teary-eyed
laughing at the spectacle of this event, and we each shared a Pepsi
from my trusty Coleman cooler and had a nice late-lunch at the
pizza hut afterwards.

El-Cheapo hams....always too much FUN to pass up
the opportunity to poke'em-with-a-stick thru the
monkey bars !! :) :) :)

Well isn't THAT ironic, Dieter...Haven't noticed YOU posting much at all,
lately, and then when you DO post, it's in a thread that you ask people to NOT
post in!

Seems pretty ironic to me!

>Remember that the
>newsgroup
>hierarchy guidelines state that "ARN" has been given permission to post on
>"rec.radio.info" and "rec.radio.amateur.misc" - but
>"rec.radio.amateur.policy"
>isn't among the list of places they should be posting their "news" (which for

>truth). They can't even figure out that MIME encoding is WRONG for usenet.

YadaYadaYada.

YOUR posts arguing against his occassional postings here probably give him
MORE publicity than if you just deleted his post and let it be done with.

At least it is directly pertinent TO Amateur Radio, BY a licensed Radio
Amateur IN an Amateur Radio forum.

If this was "the service" you wouldn't anywhere in sight. Fortunately
for ham radio this not "the service".

Sorry, this is where credibility of the story gets weak. The image of a fat
guy buying fat tubes is much more beliveable. Next time, bust up a good 50
or even a NOS S-bulb 80.

I didn't make a point of "announcing" my departure, Steve. It was simply mentioned in the messages about the auctions to explain the reason for the sale of those items. When people see a lot of similar items being sold by an individual, why is often the first question asked.

> (eg: people who swallow a "handful" of
> "pills" then call 9-1-1 to announce what
> they have done...)

Well, since I swallowed "all" the "pills" (all my ham equipment is gone), it's a little late to call 911 or anyone else. :-)

And, with that, I have really got to go. Take care.

Stewart

Good one ..... I've been involved in this hobby, service, endeavor, passion or whatever for 40 years plus. It is always an amazement to me the cheap-Os that are out there that want something for nothing or near it. OTOH I have met a lot of nice people who would bend over backwards to give me parts for nothing for my projects. That is the ham spirit at work and those are the ones that I remember after all these years.

God Bless 73 KI3R Tom Popovic Belle Vernon Pa.

Even if the tube story is false .....the true nature of a lot of hams show through. I have been at fests where rediculous conversations of this type ensued. True greed .... guys would scam parts to fill their private warehouse only to fullfill their obsesive compulsive disorder .... I read with a grin the crap I see that goes on in E-Bay and the lists. I have seen old ladies who have been super scammed by supposed friends of their deceased husbands for equipment. The one fellow I really agree with is the one who is getting buried with his mint Collins station ....he is taking it with him.

God Bless ....73 KI3R Tom Popovic Belle Vernon Pa

It's German for the military rank of "corporal". Which is the rank a certain mid-20th century German chancellor held in the Wehrmacht in WW1.

Here's the original post:

http://groups.google.com/groups?selm=20031027233514.28496.00001553%40mb-m18.aol.com&output=gplain

Len doesn't exactly show good manners or professional behavior when confronted by a differing opinion or information that proves him to be mistaken.

For more of the same, Google that word with him as author.

> > Of course, Len has no amateur radio experience, but he wants to pontificate > > to us about How It Should Be in amateur radio.
> >
> > But when you ask him how to fight the BPL

menace

> >he has no new ideas at all.

Lots of criticism of others on this point but no new ideas.

> > Most of all, note that Len tells us to
> >
> > "Leave the space business stuff to the industry experts"
> >
> > Shouldn't we do the same with BPL?
>

> nope.

but...but Mike, we're just amateurs! With "vacuum tube transmitters"! Len has told us many, many times how we're nowhere near "state of the art", how we live by "standards of the 1930s", how we're not really involved in emergency work, nor technical advancement, etc., etc., etc. He's also been consistently critical of ARRL, even to the point of accusing them of fraud (with absolutely no evidence).

Also seems to think that I am somehow responsible for the posts of others....

Now he seems to think we should know how to defeat BPL - even though he doesn't.

Odd. Very odd.

And why would it be anyone's business? Just say "no longer need this item
for my current activities".

>> (eg: people who swallow a "handful" of
>> "pills" then call 9-1-1 to announce what
>> they have done...)

> Well, since I swallowed "all" the "pills" (all my ham equipment is gone),
>it's a little late to call 911 or anyone else.

I am sure the guy who bit over $400+ dollars for used equipment that he
could have gotten new for less is wondering what pills HE can swallow.

> And, with that, I have really got to go.

Step lively.

>Take care.

Always.

Steve, K4YZ

People often want to know why a piece of equipment is being sold,
i.e., why don't you want it anymore?

So you gave a reason. But Noooooooo! There has to be an _underlying_
reason!!!

Hi, hi, hi.

> > (eg: people who swallow a "handful" of

I had a similar experience several years ago. I went to the local
once-a-month ham radio sidewalk sale and had a really clean, nice
working Hallicrafters S-40 for sale. This guy walks up and offers me $25
less than what I was asking. I refused. He said I would never get the
asking price and would be lucky to get what he was offering. I said if
it did not sell, HamCom was comming up in a couple of weeks and the
price there would be even higher. He stomped off but came back a few
minutes later and lays down the amount he offered and picked up the
radio. I ask just what the H did he think he was doing. "I am buying the
radio". I informed him that my asking price still stood and please put
the radio back and take his money and go somewhere else. Now he is
really POed.
Well as luck would have it he saw the radio at my table at HamCom marked
up at almost twice what I was asking at the sidewalk sale. He looked it
over and walked away only to come back about an hour later, with money
in had, to find the set was gone and asked if I had sold it. "Yep" I
smiled, "and at the asking price too". Doncha just luv these clowns?

[snip]

Sounds like the presumed greedy ham should have bought the hard-to-find
bargain tube for a buck just to keep it out of the hands of the other hams!

oh - btw, while on the space exploration thing...

I have no doubt that it's technically feasible to go back to the Moon,
establish a base there, and even to go to Mars. I have high cofidence that all
of the technical problems could be solved. It's just very expensive.

The problem isn't one of engineering - it's one of public policy. And such
problems are *not* to be left up to those "in the business".

Here's one way to go to Mars:

First, you need a lowcost method of getting things into earth orbit. The
"unmanned cargo space shuttle" idea is one way. Mass production of
purpose-designed dockets is another.

Second, a couple of unmanned supply ships are assembled in earth orbit. They're unmanned because it's simpler to do it that way. There are a couple of them in case one or two don;t make the journey intact.

Third, as soon as the supply ships are ready, they are launched towards Mars. It may take them years to get there but it's of no consequence because they are unmanned.

Fourth, a duo or trio of manned Mars ships are assembled in earth orbit. There's more than one of them in case trouble develops. These ships carry only people and the essential supplies for the trip. The landers and Mars surface equipment are on the supply ships. This is done to reduce the weight of the manned ships. They're "hot rods" in that they are designed primarily for speed. They're launched towards Mars at the optimum time for a minimum-time trip. They go to Mars, rendezvous with the supply ships and then the landers on the supply ships go down to the Martian surface. When the surface mission is done, the astronauts get back in the manned ships and come home.

I think all of the technical problems could be solved but the cost would be - astronomical.

Well I price things 25 to 50% high and since all buyers dearly love and must have "a bargain" -- they offer me a riduclous low ball offer.
We barter, shout, accuse each other of taking food from our childrens mouth etc
Finally we agree on the price I would have sold it for to start with.
They snicker as they take away the treasure and just know they beat me down.
I snicker as it worked again -- seldom fails.

All this is not limited to Hams -- it is an international practice. In some countries they have no respect for you if you don't go thru the drill of bartering. I have experienced this same drill in the good old USA for used goods, flea markets, newspaper ads, et al.

We all have heard:
I just went to the sale -- saved $40
He/she started at $100 I stole it for $75
The guy/gal was desperate sold it for $50 less
I can turn around and sell this for a profit
on and on goes the bartering process

Ya know they gonna low ball you so start high and spend the time to bargain -- old american custom, everyone walks away happy.

license

I have been to several clubs, and they have never required a licence to be a
member. If they requred one, they don't enforce it.

On Mon, 5 Jul 2004, Nathan C Young wrote:
> If I have a commercial license and work in broadcasting, would
> I still be allowed to attend a ham radio club meeting? Would I be
> accepted as a fellow radio brother?

Yes, but you would have to call yourself a "ham", not a "radio brother". If you
would like to refer to yourself as a piece of meat, that's your preference.

In my opinion, if you enjoy radio as a hobby, you need not identify with the
historical or cultural reference to the word "ham". If you came from outside
that context, but also enjoy radio, you should not call yourself a "ham". Most
likely, you have came from outside the context, so the terminology of the word
"ham" would not apply to you.

Often heard comments from hams attending a hamfest:

Where are all the dealers? How come there are way less dealers
this year? Why don't dealers come to hamfests anymore?

Often heard comments from hams at a hamfest when speaking
to a dealer at a hamfest:

Hey, how come youze guys dont have special hamfest prices?
Your prices are way too high.
Will you take a $100 less for this rig, since we're at a hamfest?
When are youze guys going to bring rigs to hamfests that people
wanna buy?
You guys stink, I can do better through your competitor's catalog.
This rig is scratched, will you take $250 off the marked price?
Hey, tell me about this new rig (takes up 35 mins of salesman's time,
then walks away saying he can get it for less.)

Comment Dealer makes when asked by hamfest committee
to set up at a hamfest:

Not worth my time or the expense.

Since we got this Carny/Rube thing goin' on.....

It isn't all the buyers with the problems, though. I've managed to
insult a lot of sellers with my first offer. So while they are bitching
and moaning at me about how much the thing is worth, and probably think
of me as the type described in the original story, all they had to do
was deal for a little while, and then we likely arrive at a price that

satisfies both of us.

This is America, and you are allowed to ask any price you want for what you sell. The buyer can also offer any price they want.

I would suggest that if a person is firm on all their prices, and doesn't want to deal, they might want to sell retail.

Well I have some products to sell at conventions, meets etc.
First is the cost of getting there with today's gas prices $40 to $60
Second For out of town meets there is hotel rooms, food, etc $170 +
Third the booth cost is way too high can be $300
Fourth Advertising is $35 to $100
Fifth hams are cheap -- one guy offered me half price for a book -- I asked
him which Chapter he wanted (;-)

The last convention I went to -- sold 50 products -- barely broke even
Ain't worth the time and effort

And that is great. Tubes were pretty much out of the mainstream when I
got involved in electronics, so it isn't a Electro-Luddite thing for me.
They are simply cool.

And if this is a business for you a good businessman would roll up their costs into the price of their products adjusting for what the market will bear +/- selling based on demand to get rid of the junk as a loss leader and sell the stuff that moves at a profit.

Haggling has always been part of sales.

Would you walk into a car dealership and pay sticker price ?

I wouldn't get bent out of shape over haggling.

I would get out of the business if it were not profitable.

Seems to be a big market these days for well trained bomb sniffing dogs.

Steve

Ironically, at any given hamfest where there is a boneyard, CBers, truck drivers, pirate broadcasters, boat owners, commercial fishermen, & others looking for 2nd hand unlicensed radios are cruising the boneyard and paying top dollar, without complaining or whining aboout the price.

I know of guys who travel from hamfest to hamfest, selling reconditioned ham a.m. xmtrs to pirate broadcasters, amplifiers to CBers, HF rigs to truck drivers, etc. They are paid the price as marked, top dollar, no haggling with cheap skate hams. And business couldn't be better.

And spare me the typical ham whining about the illegality of doing this. I am NOT the guy selling the stuff, only making an observation of what I see at hamfests.

In our club, anyone with an interest in the subject of amateur radio can be a member, licensed or not. We have at least two unlicensed club members who come to the club meetings regularly for the sake of the presentations we have at each meeting.

>oh - btw, while on the space exploration thing...

Oh, BTW, this is NOT the "space exploration newsgroup." :-)

Does your amateur extra license cover "space exploration?"

Do you have lots of experience in the space business? [you
don't need any because you have that HAM license, right?]

Are you rated for "200-4?" [you don't need to have that since
you can do 20+ WPM morse...]

Ever been in an MRB? Used JAN TX parts? Wear full bunny
suits? Have to work in a "Class 100" room. Did you ever elmer
a gantry? Of course you did. Just like you counted all the beans
on the financial part of space contract proposals. No problem, you
have your old ham extra to furnish all your "qualifications."

>I have no doubt that it's technically feasible to go back to the Moon,
>establish a base there, and even to go to Mars. I have high cofidence that all
>of the technical problems could be solved. It's just very expensive.

Now don't you worry none about this pesky little details. The League
will solve all of them and publish lots of books about it. Piece of cake.

>The problem isn't one of engineering - it's one of public policy. And such
>problems are *not* to be left up to those "in the business".

Riiiiiiight. And no one, absolutely NO ONE, can possibly talk about
removing the morse code test from U.S. amateur radio UNLESS they
have ALREADY TAKEN AND PASSED SUCH A TEST!!!!! :-)

>Here's one way to go to Mars:
>
>First, you need a lowcost method of getting things into earth orbit. The
>"unmanned cargo space shuttle" idea is one way. Mass production of
>purpose-designed dockets is another.

"Purpose-designed dockets?"

The "way to space" is by legal papers?!?!?

>Second, a couple of unmanned supply ships are assembled in earth orbit.
>They're
>unmanned because it's simpler to do it that way. There are a couple of them in
>case one or two don;t make the journey intact.

Riiiiight...telemeter them through morse code...that "gets through when
nuthin else will..."

>Third, as soon as the supply ships are ready, they are launched towards Mars.
>It may take them years to get there but it's of no consequence because they
>are unmanned.

...and unwomanned. :-)

<skip>

How many times do we get to view this REHASH of OLD ideas, Jimmie?

You have NO new ideas.

All you do on "space exploration" is repeat others' words on it.

NO NEW IDEAS on space. Tsk, tsk.

Oh, and BTW, this is NOT the "space exploration newsgrope."

If you are wondering why the League's Interplanetary Buro hasn't
confirmed your Martian contacts, message them direct via NTS.
[by the time it gets through, someone else will have FTL...:-)]

"Engage..." <Star Trek theme in BG>

OOK CW is a REQUIREMENT of a "real" ham. :-)

The NTS is the "backbone" of modern transcontinental messaging.

"CW gets through when nothing else will!" :-)

All "real" hams LOVE the League. They MUST!

>> how we're not really
>> involved in emergency work,
>
> hmm, I am. Plus whatever public service work that comes my way.

That's only valid when you have a "real" ham license! :-)

So haggling is whining to you? Not that there aren't some whiners in the ham ranks. They are everywhere these days.

I used to work for a commercial two-way radio business as a salesman. On Friday night or Saturday, I'd earn some extra change by working in the amateur radio side of the business. What a contrast it was between selling to business folks on cold calls during the week and standing behind a counter on the weekend. Too bad I didn't earn the same commission on the amateur side as I earned on the commercial side.

Heck, the owners didn't make as much on amateur gear as I, their salesman, made on commercial gear. The mark up just isn't there. I don't know why anyone would waste their time selling ham gear. The profit is miniscule.

How the heck can you blame eBay for this? Are you one of those hams that blames eBay for everything? eBay is just an avenue to sell. I think eBay is fine as you as you don't overpay/overbid - if you do, it's because of your own stupidity and through no fault of eBay.

If dealers don't want to go to hamfests, who cares. It's their business to run as they see fit.

This is the way to roll out high speed Internet access to rural areas
- wonder if this will make BPL a less attractive alternative?

Hope so!

73, Leo

New satellite Internet boon to rural areas

Canadian Anik F2 'bird' will allow blanket high-speed service across
North America

By SIMON AVERY
TECHNOLOGY REPORTER
Friday, July 9, 2004 - Page B4

Telesat Canada says it's about to blanket North America with access to
high-speed Internet service with the planned launch on Monday of the
world's largest communications satellite.

The 6,000-kilogram Anik F2 promises two-way links for consumers on
their computers, at a competitive price, by using a frequency never
employed commercially before. The service will be targeted, beginning
in October, to the approximately 25 per cent of the population that is
out of range of traditional cable and DSL broadband services.

While Internet access is already offered via satellite today, such
services are used primarily by businesses that can afford the premium
price. Consumers who subscribe to a satellite service provider pay two
to three times the price charged by cable and DSL companies and must
rely on cumbersome dishes about one metre in diameter. The Anik F2
employs Ka-band technology, which can transmit data faster and more
cheaply than the standard Ku-band. Telesat says data will flow at
about one megabit a second and will require a smaller antenna at the
consumer's end (just 66 centimetres in diameter).

"This is a dramatic event. This satellite will channel broadband
capacity throughout North America, especially to rural areas that
desperately need it." said Paul Dykewicz, senior editor and senior
analyst of Satellite News, an industry publication in Potomac, Md.
"What you have right now is a digital divide where urban areas receive
broadband and rural areas are devoid of any affordable consumer
service."

Telesat, a wholly owned subsidiary of BCE Inc. (which also has a majority stake in Bell Globemedia, owner of The Globe and Mail), says about 75 per cent of the capacity on Anik F2 has already been sold to telecom carriers, broadcasters and resellers, which include Star Choice Communications Inc., a subsidiary of Shaw Communications Inc., and WildBlue Communications of Greenwood Village, Colo.

"All of a sudden, right off the bat, you'll have coverage all over Canada," said Paul Bush, vice-president of broadcast and corporate development for Telesat. Subscription prices will be slightly higher than traditional DSL and cable services, but the technology is not geared at the urban centres these existing products serve, he said.

The Anik F2 is massive by earlier commercial satellite standards. Its panel of solar arrays, once unfolded, will stretch across almost 50 metres of space. One of the reasons for the size is the amount of solar and backup power required to transmit the Ka-band signals to small receiver dishes on Earth. Another is the fact that the 'bird' is designed with several bands to carry voice, video and data signals. These multiple capabilities reduce the risk associated with carrying the new and commercially unproven Ka-band, Mr. Dykewicz says.

Telesat's biggest challenge won't be the new technology so much as proving that there is in fact a commercially viable market for broadband service in rural and remote areas of North America, he said.

The Anik F2 satellite was built by Boeing Space Systems, with antenna work subcontracted out to EMS Technologies Inc.'s Satcom division in Ottawa and some of the internal electronics done by Com Dev International Ltd. of Cambridge, Ont.

While Mr. Bush wouldn't outline specific costs, he said the full cost of Anik F2, which took almost four years to build, will be in the "hundreds of millions of dollars," a price tag that includes the cost of the satellite, the launch and the insurance. The satellite is scheduled to launch Monday on an Ariane rocket from Kourou, French Guiana.

No Lou I wasn't around when the tube tale went down ....but I was up at Butler. Always enjoy looking at the junque that I have seen guys carying around for at least 2 decades and trying to dump the same. I gave up that scene about 20 years ago after filling the back of my Surburban with ballast and then realizing that my vehicle and back were taking a beating. The garbage men really went wild the next day when 90% of my junkbox went out to the alley.

My comments are also directed at the sellers who use something for 10 years and want 95% of the retail price.

Take care 73 KI3R Tom Popovic Belle Vernon Pa.

Of course it's not the only way, and just a layman's view.

Mars is a different proposition than the moon because it's so much farther
away. And unlike earth orbit, there's no escape nor quick resupply.

I entered EE school in the fall of 1972, and I think tubes were mentioned
exactly once in the coursework of all 4 years. The philosophy was that they
were similar enough to FETs that if you ever needed to know about them, you'd
be pretty close thinking of them as high-voltage FETs.

Try walking into a Kroger store and saying, "I'll give you $3.50 for
this pork roast and that's my final offer."

I pay sticker for gasoline and electric power too.

Because I believe that [simultaneous and automatic] retransmission is ALREADY
PROVIDED FOR in the existing rules and should not be considered a violation.
At most, the existing problem is one FCC employee's view - and thus a bad
ruling. What is there to actually change?

Your view is ...?

Aw go easy on him, he's just in his "grasp at any straw mode" again
Steve. He was a USAF shipping/receiveing clerk for cripes sake. How
far down the "service" chain is THAT?! But life demands that everybody
needs at least one brag point in life and his "clerical service" is as
close as he's gotten to having one. He sure as hell doesn't have any
in ham radio or in any other field that I know about. So ya handle his
predictable yelping from obscurity, which is typical of his types,
with common good humor. A pat on the head, "Good boy, good BOY
Putzlet!" "Now go fetch that box of file folders I need". The usual.

<<Yawn>>

Personally, I believe Amateur Radio Licenses should cost $75 per year for
regulatory fees and the Commission should elimanate testing. I also believe
that is how it will eventually be in the near future.

73,

Me

Always wondered why most new consumer goods, from a head of lettuce to the big ticket items like wide screen TVs, are "price as marked", but a few things like cars are all about haggling. Except Saturns.

I've had good luck at hamfests by:

- Marking "asking" price on items so people have an idea what I think it's worth.
- Marking "firm" if the price is not negotiable
- Offering stuff I just want to move as "name your price" or "make offer"

Of course eBay and the 'net have had a big effect on 'fests. We've essentially got a worldwide 24/7 hamfest going on, either as an auction or outright sale. Plus you can toss out "wanted to buy" posts. Only downside is you're dealing at a distance and the whole packing/shipping/payment/insurance headache.

Why folks expect to get eBay prices at a hamfest is beyond me, though. If you want eBay prices, go to eBay.

Doubtful that testing would be eliminated. International treaties require that there is proof the operators meet minimum qualifications.

Since the FCC has given testing responsibility to the amateur community, the FCC simply issues the license so they don't have any vested interest in eliminating testing. And of course they issue the regulations and enforce those regulations like they do for all communications services.

Besides testing is needed to attempt to insure that the licensees will have learned the basics of operating. Hams have such a wide range of privileges and frequencies that some basic knowledge truly is a necessity. We already have enough lids slip through so let's not make it worse.

Unless, of course, their price is already ridiculously low. I was selling a used tuner at a hamfest for 1/4 of what a new one would be as I simply didn't like it, wanted to get a different one, and wanted to be sure to sell it. A guy tried to bargain me down but I simply told him that we both knew what they sold for both new and used and I wasn't budging. He forked over the asking price.

Bwaaaaaa.

Bwaaaaaa.

Bwaaaaaa.

99.99999 percent of the "stuff" that transpires in this NG is NOT related to Amateur Radio, or is related only by virtue of the fact that the author is a licensed Amateur.

YOUR only reason for fussing about this is that Bill Pasternak has hit some sensitive chord with you, and you don't like it. Oh well...Take an Excedrin.

I don't see you "protesting" any of the "ENLARGE YOUR !@#$%" spam, or the "MAKE MONEY FAST" spam, nor do I see you protesting any of the "SEE MY TEEN WIFE !@#$%^" spam.

NONE of that is even REMOTELY related to Amateur Radio, yet where's Dieter's outrageous indignation about THOSE "guidelines/charter violation(s)"...?!?!

I reiterate my previous assertion: It's directly pertinent TO Amateur Radio, BY a licensed Radio Amateur IN an Amateur Radio forum. Much of what is in Bill's "news releases" >>IS<< pertinent to Amateur Radio policy discussions....And certainly MORE pertinent than most of the other stuff that transpires here.

All I can say is that what ever Bill did/said that got you in such a wedgie must have hit pretty close to home! You're obviously still stinging from it!

It wasn't as witty as Dave's "Moon Pie" humor, but he only comes up
with something good every decade or so.

The "simultaneous and automatic retransmission" you refer to is for
AMATEUR communications...

The FCC has repeatedly and unwaveringly stated that is it ILLEGAL for
Amateurs to rebroadcast non-Amateur traffic. Period.

>At most, the existing problem is one FCC employee's view - and thus a bad
>ruling. What is there to actually change?

YOUR understanding of the rules, obviously

It's not ONE "FCC employee's view". It's been stated and restated ever
since I was first licensed (over 30 years now), and there's no likelyhood
they'll change thier minds.

The FCC knows, as well as almost every other active Amateur, that if you
have a 2 meter rig, you can listen to the NOAA weather. So what need is there
to rebroadcast the actual audio?

>Your view is ...?

There are NOAA receivers available for less than $20. Non-Amateurs who
want to listen to it can do so without having to buy a $200+ Amateur device and
modify it in order to do so. The NOAA channels are available options in CB's,
FRS and Marine radios already.

The places where NOAA transmissions can NOT be heard are extremely few. I am sure there is some remote butte in Montanna or some valley in West Virginia that has poor or no coverage...But certainly not enough for the FCC to reverese it's policy...Espeically in light of NOAA's expenditures to spread the net. In my "neighborhood" alone I can hear transmissions on 3 of the seven channels on an HT...I can imagine what I might hear with a dedicated receiver and appropriate antenna.

Those Amateurs who want to hear it are usually already involved in SKYWARN and already know the frequencies to tune to. They don't have to cling to a local repeater hoping that someone else will "rebroadcast" NOAA audio.

Lastly, for someone who keeps whining about another Amateur posting Amateur Radio related news items in an Amateur Radio forum, I find it really funny that you want to play junior disc jockey on Amateur Radio with NON Amateur weather broadcasts.

Dee,

I was going to dismiss the troll's post simply on the basis that it was written by someone who doesn't have the gonads to sign his/her name to thier public comments (read that: coward) but then I got to thinking that there might be something to it.

You know, of course, that I work in healthcare as an ER nurse...And you would be absolutely shocked at the number of people who come to the ER in distress because they claim they can't "afford" thier medicines...Of course they either wreak of cigarette smoke, metabolized alcohol, or both...but they can't "afford" medicine.

So...ballpark the number of Amatuers at 650K...At $75/license that is over $48M a year for the General Treasury coffers. Of course for that I'd expect a

lot stricter policing of the bands by Riley & Co for it, but hey, let's do it...

I am willing to bet that most of the idiots who are discipline problems on the bands are smokers, too. That $75 would be a whole lot of cigarettes, even at present day prices. And there is one ultimate truism...Smokers will forego food, debts and common sense in order to buy more cigarettes (as will alcoholics for more alcohol...). I am willing to bet the scufflaws on 75 and 20 meters would go away in short order after the extra money for enforcement nails them to the wall.

My license is worth $75/year to me. I'd pony up the cash. And I can promise you you will never see my name in one of Riley's "letters" on the ARRL website!

Doesn't matter if they see the light, the FCC is a sock-puppet to the commercial interests of the Bush administration.

There used to be a time when the FCC was an organization of engineers and technicians that had a clue. Now days, it's lawyers and people getting a favor for the political handjob of yesterday.

It really wouldn't matter who was in power. Wasn't it under the Clinton
administration, for example, when significant chunks of spectrum were
auctioned off to commercial interests?

You missed my point. It would be just as bad no matter whose administration
it was and no matter to what party they belonged. If it were a Gore
administration, they'd be just as much a sock puppet to the commercial

interests of that administration.

Alun, are you saying that its the vanity people that require them most
regulatory attention, and thus should pay more?

Dave, you're hardly therapy. They say that "laughter is the best
medicine." You are merely amusing once every eight years.

No. How could you get that from what I said?

All I am saying, if I have to spell it out, is that there is absolutely
zero probability of theory testing being abolished and not much more
likelihood that fees will be reintroduced for other than vanity calls.

And furthermore, a $75 fee is not in the least likely to reduce bad
behaviour on the air.

Yeh, go easy on me. I've got more military experience in my little
finger than Kelly's ever going to have. And we probably would have
had far fewer missing pallets if I had been a box kicker.

> How far down the "service" chain is THAT?!

Everyone played their role except you. Even the box kickers outranked
you. Best you can do is sing "Rubber Band Man" and "In The Navy" on
Karoake Night.

But life demands that everybody
> needs at least one brag point in life and his "clerical service" is as
> close as he's gotten to having one.

Try meteorology.

> He sure as hell doesn't have any
> in ham radio or in any other field that I know about.

What I don't do is run on at the mouth about military experience that
I don't have. Sound familiar?

Hi, hi!

You got Seven Hostile Actions, too?

So ya handle his
> predictable yelping from obscurity, which is typical of his types,
> with common good humor. A pat on the head, "Good boy, good BOY
> Putzlet!" "Now go fetch that box of file folders I need". The usual.

Like the time you tried to get me to put up an antenna at your house?
Or are you so senile that you thought I lived there?

At 1/4 price, sure! I usually won't buy above 1/2 of currently
manufactured price. Elswise, I'm happy to buy new, with a warrantee and
I'm also not buying someone elses problems. My main point in this whole
discussion is that there are a lot of sellers that seem to hate buyers.
The Carny vs Rube thing.

All true...unfortunatly the REAL problem is the lack of basic, let alone engineer level, knowledge to even understand what is going on with BPL. Politics aside.....ain't it a real pity that the FCC has no concept what they are doing with this BPL crap? No one in the right mind would have let this get out of the first meeting.

As for the Bush administration pushing this. I think the real situation is some low level gofer with his computer knowledge decided this is a 'good' thing. Then he got someones ear to push it at the Prez.

Look at the way the NTIA back peddled.....they came on strong against it...then all of a sudden they are going backwards. Politics...pure and simple.

It is up to us and ALL THOSE it trashes to put on a sustained attack against this BPL. If we don't we are stuck with it.

I think it's characteristic of our modern society: if top-level management has any understanding of the things they are supposed to be managing, that's purely fortuitous. They tend to be specialists in *management*, not in managing anything specific. E.g., a former Coca-Cola big wheel became the CEO of IBM; if he knew anything about computers, that was a pure coincidence; for that matter, if he knew anything about cola it was likely a pure coincidence too.

I heard this issue raised in a discussion of the Chrysler/Daimler-Benz merger on the eve of its consummation. Chrysler was run by managers, whereas Daimler-Benz was run by engineers.

What happened to the practice of having people destined for management positions spend time working in every department of the company so they know exactly what the company does and how?

Driving home from Detroit yesterday, we stopped for dinner at a truck stop, where we overheard a waitress telling another customer that she was busier than usual because the cook had called in sick so the managers were having to do the cooking and were not able to help with serving. But in this case the managers were able to cook. What would they have done if the managers could not fill in for the cook?

I think he understood your point perfectly. Ergo, the "sitting administration". Think beyond defending GWB and his republican asshole cronies.

Let's face it, it doesn't matter if you are democrat or republican, they are all money grabbing pricks who care only for themselves. Unfortunately, I don't see a way of changing it. The voter apathy is disgraceful, and most people don't even bother becoming informed.

We're being sold-out and doomed into slavery to pay off the huge government debt.

The more I read about BPL, the more I'm convinced that the market place will manage to kill it. There are already at least five technologies (dialup, DSL, cable, WIFI, and fiber optics) that do or could do the job. For BPL to compete, it will need to have the reliability of cable and be as cheap as dialup. That combo isn't going to happen plus the DSL, cable, and WIFI companies are slowly dropping their prices since price is the key factor that keeps people on dialup. The upgrades needed for our powerlines plus the additional boosters, etc is going to mean that BPL will cost a fortune to implement. This cost must be picked up by the customers. So BPL will approach the cost of other, better services yet be subject to all kinds of natural and manmade interruptions (unshielded wires just don't cut it).

The thing is, it sounds cheap and simple because we have power lines everywhere. So it's not too hard for proponents to do a snow job on investors and politicians.

I even saw an article somewhere that said BPL would reduce powerline noise. But the reality of the situation is that the BPL companies will have to reduce the powerline noise to get BPL to work well.

Of course this does not mean that we shouldn't fight it. There are "pie in the sky" investors who will try to make it work so for some areas and some period of time, it will be interfering with various radio services before it is abandoned. Since stopping it before it starts will prevent that period of interference, we need to keep fighting.

I don't pay sticker for electric. In the empire of NY you can negoiate a price with your electric vendor of choice. Not that it saves alot of money for me.

Then submit a request for a Declaratory Ruling. That will settle
the issue one way or the other. The results you get may not be one
that you like, however (the Bill Cross effect....) and then the only
avenue open is to request a rule change which would be unlikely
because "they" will have already dealt with the issue.

They used to require Morse code. The testing requirements could be
removed just as easily as the Morse requirements were.

There are those who feel that the FCC's predecessor, the Federal
Radio Commission, was a sock-puppet to the Herbert Hoover
administration. This was long before FDR and the New Deal alphabet
soup agencies.

HH was the Secretary of Commerce before he became prez in the era
when the Commerce Department did what the FCC does today.

I really have to be respectful of him as a person because I actually
had the opportunity to shake hands with him when I was a senior in
college in the mid-1950s -- he was the kick-off speaker for the
fundraising campaign for our then-new engineering building and made
it a point to shake the hand of every senior engineering student.
He must have been in his 80s by that time.

Out here in Greenie-land one has the choice of several "green"
sources, all at a higher price than "mutt" (mixed) power. I can't
even get what I really want -- in the Umpire State can one
negotiate a residential contract for guaranteed-all-nuclear-generated
power?

I suppose that if my consumption was 1000 MW (one standard
generating unit) I could negotiate same...assuming that they had a
spare unit sitting around offline or they could get the permits and
insurance to build another one (fat chance of that).

Negotiate?

Or do you simply have a choice of providers?

Here in EPA we can choose providers, all of whom have different rate plans. But there's no negotiation - you pay what the rate plan says.

Is New York different?

No, you don't. That's your right.

And the Constitution guarantees EVERYONE the right to be a coward if they
so choose.

You chose. No problem.

If you place so little value in your own opinion that you won't sign your
name to them, what makes you expect that anyone else should take them
seriously?

Perhaps he IS the smarter one, since working for Uncle keeps him
(relatively) free of direct threat of lawsuit. Uncle picks up the tab for
almost any suit directed his way as a result of his professional duties.

He wouldn't have that protection otherwise,

>But working a Gov't job proves that he can't survive in the REAL

That's been codified in past FCC doctrine. Amateur practice supports
using the calling channels for just that, then QSY'ing. He just supported
that. Always has.

>Second, he tells us hams that we can't use
>phonetics when ID'ing...I mean come on people, you don't need to be a rocket
>scientist to know that!!

His later comments were clarified to mean that unusual or "cutsie"
phonetics shouldn't be used. There was some pontificating by the ususal
sideline lawyers about him "demanding" that we not do it.

AX-No-archive: yes

It will be a truly deregulated market when a REP provides "block pricing" for entire neighborhoods. The more neighbors/streets/blocks that want to be involved, the better the price. No reason residential markets shouldn't be able to negotiate price--it just hasn't been done yet (well, at least that I know of).

Hello me ??????? oh well ....

You have an excellent suggestion there regarding the 75 bucks a year. That would get the Feds the kind of enforcement clout that would have all the echo chambers, illegal KW users, freebanders, shrimp boat screw-ups, 25 alternator pick-ups, 10 meter truckers, illegal 11 meter bums ETC. running for the hills, burying their illegal rigs under the manure pile and getting into leather working or beanie babies. The enforcement WAS that way. I know a lot of people in the past who got hit with $500 (1965 dollar) fines. So me you have a very positive idea there ...one that I would have no trouble with. IF one really wanted to be a ham then 75 clams would be a bargain. However the cheep-Os would be squealing like a greased pig if this were to pass. Also the testing could be given back to the FCC where it belonged in the first place where, like I said before, shenanigans could be minimized.

Testing elimination ? ..... probably not for a while but one thing I would suggest is that with the funds the present 11 meter system could be shut down permanently and placed up on UHF where CB would realize its original intent.

Take care all ..... KI3R Tom Popovic Belle Vernon Pa

>know of).

That'd be a hoot, Kim! Imagine trying to get a bunch of neighbors to agree on
something like that. Maybe in those McMansion-CC&Rs-out-the-wazoo communities,
tho...

The big joke about all this is that we really don't choose who actually
generates "our" electricity. It's more of a shares type of thing.

And after the mess out on the Left Coast a few summers ago, and now the
revelations of Enron double-dealing, the idea of highly regulated monopoly
utilities looks better and better, in some ways.....

Which reminds me - how come we can't buy group auto insurance?

Not low-end products but low profit margin items.
Did not see anywhere in the original poster's post where he/she had
"an axe to grind." However, you are welcome to your opinion.
And why are you telling the original poster he/she will never be
successful at sales. I see no where in the original post where the
poster claims to be in "sales." Also, please explain the criteria for
predicting success or failure in "sales."

I disagree slightly, Dan.

I think there are folks at FCC who know darn well how bad an idea BPL really
is. The problem is that those folks are not in charge.

>Politics aside.....ain't it a real pity that the FCC has no concept what
>they are doing with this BPL crap? No one in the right mind would have let
>this get out of the first meeting.

Only if they had a basic grasp of the physical principles involved. But the
folks at the top are not engineers or scientists. They're "regulators".
>
>As for the Bush administration pushing this. I think the real situation is
>some low level gofer with his computer knowledge decided this is a 'good'
>thing. Then he got someones ear to push it at the Prez.

Possibly. Look at all the 'next big thing' companies that have come and gone in
the past decade or two, and how many trillion dollarss were pumped into them.
The Bush administration is still sitting on a jobs deficit and a lackluster
economy. *Any* new thing that promises big gains and jobs without massive
investment is going to get a lot of attention from an administration desperate
to be reelected.
>
>Look at the way the NTIA back peddled.....they came on strong against
>it...then all of a sudden they are going backwards. Politics...pure and

BINGO! The guy in the Oval Office sez tone it down, and they did.

Do you remember how we got saddled with code test waivers? A King asked Papa
Bush for a favor. Papa Bush told FCC to find a way to make it happen. Treaty
prevented merely dumping the code test so we got the whole waiver mess.
Gee thanks George.

>It is up to us and ALL THOSE it trashes to put on a sustained attack against
>this BPL. If we don't we are stuck with it.

Agreed. And look carefully at how it was done in Iowa. Including the ARRL's
important role.

Whelp, it doesn't take a sense of humor to obtain an amateur radio
license. One has only to get off one's duff and overcome intertia.
Leonard talks about it, writes about it and thinks about it. He just
doesn't do anything about it. Until he does, he remains an armchair
quarterback.

Buying something from someone else isn't the same as negotiating a
price.
You're simply paying someone else's sticker price. You aren't haggling
with an electric company; you're changing providers.

Fred Riley is an eccentric electronic engineer whose theories have put him into the heart of a controversy he never intended. That he is being remarked upon here is evidence as to just how far out of hand this issue has gotten, inducing passionate, emotional diatribes in place of calm, civil debate. - A situation that Doctor Riley would never have countenanced.

Please leave this innocent, torented scientist alone, unless you can come up with the math to refute his theories - as none have so far been able to do!

The techniques of corneal transplants and such operations predate the internet. In those pre-organ-donor-card days, usable eyes would come from all over the USA, and matching them to waiting recipients in the limited time available was a real challenge.

The Eye Bank Net served as a clearinghouse-on-the-air to coordinate donors and recipients, transportation, etc. Some hospitals (usually eye hospitals) even had ham stations while most used the services of local volunteer amateurs.

Now, obviously in the case of a life-and-death emergency when there is no other option, amateur radio communications can step in, even to aid commercial operations. But eye transplants aren't a life-and-death emergency.

FCC had no official position on the EBN at all - until somebody formally asked if it was legal, and pointed out that in most cases the required communications could theoretically all have been done by long distance telephone. Expensive and cumbersome given the telephone technology of the time, but possible.

So FCC *had to* give a ruling (because they'd been formally asked), and IIRC the EBN had to change the way it operated in order to meet the rules as clarified by FCC.

Today of course the whole thing is done online, and transplants of many kinds are almost routine. But things weren't always that way, and amateur radio was there when needed.

The shortcomings if the Internet. You have to look in the right
places:

INQUIRY INTO THE EXTENT TO WHICH AMATEUR STATIONS SHOULD BE
USED ON BEHALF OF NONAMATEUR ORGANIZATIONS

FCC 72-895

Docket No. 19245 RM-1687

Released: October 11, 1972
Adopted: October 5, 1972

REPORT AND ORDER

BY THE COMMISSION: COMMISSIONER JOHNSON DISSENTING;
COMMISSIONER REID ABSENT.

2. The Notice of Inquiry was the proximate result of Sec.
97.39 which prohibits certain organizations from both
obtaining an amateur station license or having an amateur
operator use his station on behalf of those organizations.
One of the effects of this Rule is to prohibit amateur
operators from using their stations on behalf of such
parties as the EYE BANK, American Red Cross and the March of
Dimes as well as commercial businesses.

8. We are adding a new section, Sec. 97.114, which will
both probhibit commercial third party traffic and clarify
the permissible international third party traffic. As to
the provisions of subparagraph (a) concerning international
third party traffic, these rules simply incorporate the
already existing international rules. As such they make no
change in permissible communications and they are therefore
considered to be of an editorial nature. Subsection (c) of
Sec. 97.114 prohibits corporations, companies, associations
and other organizations engaged in commercial activities

from using amateur radio facilities. It will not prohibit the use of the Amateur Radio Service on behalf of organizations such as the EYE BANK and the American Red Cross except for traffic which relates to the regular business affairs of those organizations. Subparagraph (b) will prohibit amateur control operators or station licensees from receiving any compensation including a salary or reimbursement for non-collect telephone calls for operating an amateur station for transmitting or delivering third party traffic. This provision explicitly sets forth the fact that both domestic and international amateur traffic must not be handled with a pecuniary interest in mind.

27 RR 2d 1202, 480 F2d 1288
No. 896, Docket 72-2229

UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

April 11, 1973, Argued
June 13, 1973, Decided

The sole issue properly before us on this petition to review a newly promulgated regulation of the Federal Communications Commission, 47 C.F.R. Sec. 97.114(c) (1972), which prohibits use of amateur radio station facilities for transmission of business communications, is whether the regulation violates the freedom of speech provision of the First Amendment and the anti-censorship provision of Section 326 of the Federal Communications Act, 47 U.S.C. Sec. 326 (1970). We hold that it does not.

We deny the petition to review.

The rule making proceedings that led to promulgation of Section 97.114(c) were initiated by a petition filed September 15, 1970 by the Amateur Radio Section, Industrial Electronics Division, Electronics Industries Association (the Association). The petition sought an amendment of former Section 97.39 of the FCC regulations, 47 C.F.R. Sec. 97.39 (1972), which prohibited non-amateur organizations from holding an amateur station license and from using the facilities of amateur licensees. 3

Despite the unambiguous language of Section 97.39, amateur stations had been used for communications on behalf of certain non-amateur organizations such as the Red Cross and March of Dimes. Such use went largely unchallenged because there was general agreement that such organizations were meritorious. Recently, however, there had been a proliferation of non-amateur organizations which sought to use amateur stations for less meritorious purposes. In response to requests for interpretation, the FCC denied use

of the ARS on behalf of such meritorious organizations as the EYE BANK and the United Fund. This led to the Association's rule making petition, referred to above, in which the FCC was requested to amend its restrictions on third party traffic by permitting messages in assistance of certain enumerated "non-profit public service" organizations and activities.

The upshot of the change reflected in Section 97.114(c) 4 was to effect a compromise between total prohibition of third party traffic and total allowance of third party traffic. The FCC recognized that total prohibition would be inconsistent with the expressed purpose of "recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service." 47 C.F.R. Sec. 97.1(a) (1972). On the other hand, total allowance would produce unmanageable congestion in the amateur frequency bands. The solution adopted was to prohibit only commercial messages which had long been considered inappropriate in the ARS, although not expressly forbidden. As a result of the rule change, public service organizations such as the EYE BANK and American Red Cross are able to use ARS facilities except for communications which facilitate the regular business or commercial affairs of those organizations.

>into leather working or beanie babies.

You assume that the $75 or whatever the fee is would go to the
Commission earmarked for amateur enforcement. The Congress would
never let it happen that way. Those fees go directly to the U S
Treasury for whatever purpose The Congress and the Administration
uses them. Look at all the money vacuumed up by the spectrum auctions.

>The enforcement WAS that way.

Only because the powers-that-be understood why it had to be that
way and were willing to put people in there who believed that way
and could get it done as well. Sadly, those days and to a great
extent the folks who could get the job done properly are gone.

>Also the testing could be given back to the FCC where it
>belonged in the first place where, like I said before, shenanigans could
>be minimized.

The powers-that-be don't want it back and will do everything in
their power to make sure that it doesn't come back - all in the name
of "privitization". I fought that battle 15 years ago and still
have the scars.....

Report On A Local Hamfest

After more than 5 years away from the hamfest scene, I went to the Kimberton, PA (MARC) hamfest this morning. Last time I was there was 6-7 years ago.

Weather was great - clear and sunny but not humid or hot. Brought a van full of stuff (mostly parts and ham magazines) to sell and sold a good amount. As is usual, there was no good way of predicting what would sell and what wouldn't.

Attendance was about the same as I remember from 6-7 years ago. Kimberton is not a big hamfest, and is not dominated by dealers or computer stuff. Prices were what I consider reasonable for what was offered. Saw some old friends and made some new ones. Said "good morning" or "hello" to everyone who visited my table, and always got a pleasant response. Had some great conversations, too. No griping, no nasties, no problems.

Main problem with hamfesting (for me) compared to internet selling is the time investment. Have to spend some hours getting the sell stuff ready, loading the car, driving there, selling, then loading up what didn't sell and reversing the process. The time is in big chunks rather than a few minutes here and there If the weather doesn't cooperate the effort is wasted. Internet prices are generally higher but you have the packing and shipping work to do.

Now to check when the next 'fest is...

Won't happen, government budgeting doesn't work that way. All taxes and
fees collected get dumped into one giant pot, and Congress divies it up
regardless of the sources.

502. FCC Morse testing at 16 and 20 WPM

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-11 22:58:14 UTC
From: Avery Hightower <Hightower@cosmos.net>
Message-ID: <aCjIc.2170$sV2.1215@newsread2.news.atl.earthlink.net>
Source record: 94178

Quote from FCC web, http://wireless.fcc.gov/commoperators/t2.html

"Telegraphy Examinations Elements

Element 1 - 16 code groups per minute.

Element 2 - 20 code groups per minute.
Telegraphy exams consist of both transmitting and receiving tests. Examinees must copy by ear and send by hand plain text and code groups in the international Morse code using all the letters of the alphabet, numerals 0-9, period, comma, question mark, slant mark, and prosigns AR, BT, and SK. Examinees must copy and send at the required speeds for one continuous minute without making any errors. Each test lasts approximately five minutes. The failing of any code test automatically terminates the examination.

Code speeds are computed using five letters per word or code group. Punctuation symbols and numbers count as two letters each.

Examinees may use their own typewriter to copy the 25 words-per-minute receiving test, but must copy tests at lower speeds by hand. Likewise, examinees may use their own semi-automatic key to send the 25 word-per-minute sending test, but must send tests at lower speeds using a hand key.

The Commission will grant credit for Telegraphy Elements 1 and 2 to applicants who hold an unexpired (or within the grace period) FCC-issued Amateur Extra Class operator license."

"LA Runabout" <anon@larunsdx.net> wrote in message
news:ccm0hp$621$0@pita.alt.net...
> Often heard comments from hams attending a hamfest:
>
> Where are all the dealers?

1) Most are Out of Business from lack of sales and/or were fed up with
putting up with
exceedingly cheap, dirty minded, odiferous old men. Also the complete
looneys
with the ball-mount antennas on their hard hats, which they used to see
at
each and every hamfest, year after year after year, who last parted
with a
$5 Bill when Jimmy Carter was President.

2) Their now on e-Bay where you can make big $$$ selling
40+ year old tube radios to complete suckers. (errr..radio
collectors)

3) Gave up long ago when they saw the writing-on-the-wall
with 65+ yo hams who still chain smoked and drank
like fish at the VFW or AL Hall and were 2 steps
from the graveyard.

4) Kids have abandoned ham radio a VERY long ago.
Oh sure, some ham's kid will be brow-beaten to get his
to get his license just so the old man can look
good at the club meeting, but sure as glub made
green apples, when the kid (uaually male and white)
turns 13 or 14 and the hormones kick-in, ham radio
goes away and in comes girls and Internet Chat rooms
and music swapping. (Hint: Put a teenager of 2004 in
front of a table with an FT-1000MP on one side and
and Apple Ipod with all accessories on the other and
tell him he can take his choice what he wants. Guess
what electronic goodie will win out in 98.9% of the time
with today's teenagers..?)

> How come there are way less dealers this year?

See the above. (Plus it makes VERY GOOD FINANCIAL
SENSE to keep a listing of the hams in your area. When they
finally croak, and this is a sure bet per reason #3 above.)

In most cases their XYL's can't stand their ham radio, their male
ham friends and those goddammed antennas in the back yard !
Keep a list. When the Ham's name is in the Obit Listing in the
newspaper, be ready to pay a visit on successive trash nights
when she may put her dead hubby's radios out on the curb
or sells the radios for peanuts at the springtime yard sale.
Also place a call and offer to clean out all that radio crap a
few weeks after he's planted in Terra Firma! You may strike
a bargain like I did once and pick up pair of TS-850's for
$100.00 - (later re-sold on E-Sucker at considerable profit)

> Why don't dealers come to hamfests anymore?

Most of em are too damm old and can't walk up
a flight of stairs at home, let alone a flea market.
Comes from years of smoking cancer-sticks or
smelly pipes. Watch'em drop in QST each month.
(Wayne Green was 100% right on this tobacco issue)

> Often heard comments from hams at a hamfest when speaking

The problem with Dr. Riley's theories is that not once, during any of
his recorded lectures, did he explain his findings without giggling.

Personally, I find it disturbing when a scientist of such high regard
offers a proof of his findings in mathematical format and when it comes
to the hard math, he simply leaves it as "well, the numbers lie a little
but you should just take my word for it". His highly controversial
paper "Tesla Stole My Underwear", while entertaining and a good read
while listening to Jimi Hendrix with low-light conditions and smoking
marijuana, really seems to be a little beyond science.

No it isn't, because the 650K would dwindle within a decade to somewhere
around 20K if a 10-year license renewal cost $750.00.

Then, with only 20K licensed amateurs the service would be folded up as
a poor reason to occupy the valuable spectrum it holds.

I went exploring further on the FCC site and found that the question pools -- with answers -- are available for the various Commercial Radio Operator license exams, just as they are for the Amateur exams.

And ISTR reading that the FCC had adopted the practice of using published questions and answers after finding that the system worked OK for the FAA for pilots' licenses.

So if the Amateur license tests are being dumbed down, they are not the only oner.

Alan AB2OS

Now you are going to become the arbiter of what analogies can be used in
what scenarios, Brain?

Is anything in Dave's post inaccurate, Brain?

Lennie's own posts herein verify he "writes" about Amateur Radio.

By his own words, he talks about it to others.

And he has quite obviously done absolutely nothing about it.

"Armchair quaterback" seems to be a farily benign analogy to me........

Dr. Riley does sometimes giggle during his lectures, but the behavior has nothing to do with the materiel he is presenting. Instead, it stems from an unfortunate incident during his first public speaking engagement, where stage-fright almost kept the poor man from ascending the podium in the first place. At the last moment, the exasperated dean of the college suggested to the shy doctor that he imagine the members of the audience were all sitting in their underwear. This allowed the shy, asocial doctor to present his lecture, but to this day he still sometimes giggles at the podium...

Yes, Einstein was saying much the same thing when he spoke of the probability of "God playing dice". Many of his colleages were disturbed by the reference then, just as you are now. The same can be said for Watt's contention that we declare research to have come to a "conclusion" when we tire of gathering and weighing the facts, as opposed to when we have actually gathered and weighed all of them. Nonbody wanted to hear about

that, either.

>His highly controversial

Well there you are... I never saw much entertainment value in the paper, perhaps because of my preference for Eric Dolphy accompanied by a bright Pinot Grigio, as opposed to your taste in auditory and chemical amusement aid. Turn up the lights, open the windows, air out the place a little and I'm sure you'll have an easier time appreciating the doctor's work. After all, it's not as if his tenure were at Harvard!

Surely "Tesla Stole My Underwear" should have given you a clue to Fred Riley's giggling behavior, but it appears you never made the connection and turned to drugs. You really owe it to yourself to review the doctor's work while in the proper frame of mind. Many have claimed that the man is unbalanced, but I can assure you that Dr. Riley's balance is a delicate one, maintained by will alone. You could do worse than to follow his example, there.

Crank up the Eric Dolphy... Throw back a glass or two of Pinot... It will all start to come to you as the evening progresses, I'm sure.

A couple of years later, some space cadets at NASA's Goddard Space Labs near Washington DC persuaded the Commission that retransmission of NASA communications to and from the space shots on an amateur 2-m frequency was in the public interest even though it clearly violated the black-letter rule. "Oh yes", the nabobs replied, and so amended the rules. Myself and two other colleagues whose hobby was chasing and photographing railroad trains tried to get the same retransmission permission for the comms which we monitored in OUR hobby, and we were told "shut up and play"....

Life isn't always fair....

That story is older than Riley and has been told many times about "shy"
speakers.

1. Most everything is done that way today. Make a question pool large
enough, and there is no problem.

A thought: If a question pool is cheating, then a book with the answers
in the test in the course of reading is cheating too.

So...

The only way that *some* Hams will be happy is if the test questions
have answers in no book - that is to say that all testing will have to
be in the form of basic research - the new ham will have to advance the
state of the art in his/her admission test.

Otherwise the new ham is cheating and isn't as good as the old ham. 8^)

(I just recently had to listen to an old timer in person on a tirade
about the worthless new hams - again.)

1) I have not made it any secret what he has done to one of my associates by misreporting the story he was involved in. 2) If newsline is supposed to be a "non-profit" operation then why is BP practically LIVING off of the donations? There are laws that govern what "reasonable compensation" is for a non-profit, and he's exceeding them, as I have previously demonstrated.

Wrong. Look at the recent modification to .113 for WX stations. Also,
retransmission of NASA Shuttle communications has been in the rules for more
than a decade (granted, the initial retransmitter is supposed to get permission
from NASA, but the fact that it is allowed in ANY FORM defeats your absolute
statement).

Receivers less than $20.00 don't have SAME or special actions that they take
when hearing an EAS broadcast. You've missed the point here.....

This topic is clearly about the rules and FCC policy (and its interpretation fo
the rules). There are many things in AR Newsline that have nothing to do with
the rules or operating practice and therefore don't belong here on ".policy"
(but may be appropriate to one of the other amateur radio newsgroups).

I asked for your view, not what to do since I believe that they are wrong.

Is it your position that the ruling is correct AND that my view is incorrect
(since both have support in the rules)?

It means that your ulterior motives are glaring.

This is not about "spam".

It's about Dieter Stussy-vs-Bill Pasternak. Period.

You've only demonstrated that you're PO'ed at Bill Pasternak.

If you want to make your point, why don't you either document your concerns to the FCC or the IRS, since they are the two most likely agencies to have an official opinion on the matter...

Lastly, the federal tax codes allow for a percentage of "charitable donations" to be used for administrative (eg: salaries) purposes. I've met Bill Pasternak and I dare say he's sharp enough to have made sure that his finances are TDC with the law.

Unless you can prove differently...?!?!? (My bet's on "PO'd indignation" more than valid complaint)

If all you are looking to do is "defeat( ) (my) absolute statement", then
congratulations.

However the NASA example is a specific waiver from the FCC, and NASA
hardly has hundreds of remote transmitters in every state to share the shuttle
traffic, now do they?

No I haven't.

Neither my $150 2 meter rig nor my $350 V/UHF rig have SAME function in
them either. What would be the point of having those alert tones squawking on
2M or 70CM...?!?!

So...We bump the $20 up to $40...I can find at least a half dozen radios
in that price range that >>DO<< have SAME in them. So what then?

Personally, I'd rather keep the radio seperate so I could monitor NOAA
while keeping my 2M rig for 2-way purposes.

>
>Then explain why the rules were changed a couple of years ago to permit
>it....

Explain to me where it's permitted 24/7, Dieter...

Explain to me where it's allowed to be AUTOMATICALLY retransmitted.

Follow along:

97.113(e) No station shall retransmit programs or signals emanating from any type of radio station other than an amateur station, except propagation and weather forecast information intended for use by the general public and originated from United States Government stations and communications, including incidental music, originating on United States Government frequencies between a space shuttle and its associated Earth stations. Prior approval for shuttle retransmissions must be obtained from the National Aeronautics and Space Administration. Such retransmissions must be for the exclusive use of amateur operators. Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

Re-read that LAST LINE over and over, Dieter.

Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

Propagation, weather forecasts, and shuttle retransmissions may not be conducted on a regular basis, but only occasionally, as an incident of normal amateur radio communications.

(Just thought I'd help you along a little bit.)

Allow me to make further emphasis of part of that regulation:

Such retransmissions must be for the exclusive use of amateur operators.

Such retransmissions must be for the exclusive use of amateur operators.

Such retransmissions must be for the exclusive use of amateur operators.

So what would be your point? There's no way you can make those rebroadcasts and NOT be assured that the broadcast was NOT being used by non-Amateurs.

>> Lastly, for someone who keeps whining about another Amateur posting
>> Amateur Radio related news items in an Amateur Radio forum, I find it
>really
>> funny that you want to play junior disc jockey on Amateur Radio with NON
>> Amateur weather broadcasts.

>the rules). There are many things in AR Newsline that have nothing to do
>with
>the rules or operating practice and therefore don't belong here on ".policy"
>(but may be appropriate to one of the other amateur radio newsgroups).

And I can pick almost any thread in any other of the other NG's and find discussions going on there about topics OTHER than wha the charter for those

NG's may have "allowed".

How come I don't find Dieter Stussy in any of those NG's howling about the inappropriateness of those posts...?!?!

Lastly, I didn't imply that this wasn't about the rules...It certainly is...I just said I find it ironic that you want to play junior disc jockey with NOAA weather broadcasts.

WHERE in LA County can you go and NOT hear an NOAA broadcast, Dieter?

I've been in Mojave, up to Bishop and down in Imperial County and was never out of earshot of an NOAA weather station...and THAT was in the late 80's and early 90's. I used to sit in the Marine Expeditionary Airfield shelters with my HT and copy NOAA.

And having BEEN in SoCal, I am intimately aware at how congested most of the 2meter band is...All we need is for Uncle Same to "green light" the rebroadcasts you suggest to have a whole band full of junior weathermen...What next? Health reports on Ashley and Mary-Kate?

Steve, K4YZ

That's the way to do it! Somehow I suspect you don't hate the customer
either, eh?

> want eBay prices, go to eBay.

The bloom is fading from that rose anyway. I did a quick perusal of ham
related equipment, and the prices seemed quite similar to what I would
expect to pay at a flea. There will always be the occasional outrageous
selling price, either on the high or low end, but it looks as if sanity
may be coming home in Ebay.

As much as I bust seller's chops, I really liked the original posters story, be it true or not. It's a good illustration of the buyer/purchaser relationship.

Hoot, whine on, keep reaching for that last straw, you just ain't
making it yet Putzlet. At all.

Of course I didn't outrank anybody. I just told the Chief what I
needed and poof, job done without me having to deal with your types.

> Who says being in the Armed Forces is the ONLY way to have "played thier
> role", Brain? Every war this nation has won was due to service and sacrifices
> made at home, too.

The son of a next-door neighbor, an only child who flunked the draft
physical in 1942 signed aboard the Merchant Marine. During a convoy
run to Murmansk in a ship loaded with steel rails a Nazi torpedo found
it's mark and the ship went under in a half minute with all hands, all
of 'em civilians.

My father was 'way too old for WW2 service but he worked 12-14 hour
days six-seven days a week building tanks at the Baldwin Locomotive
Works thru VJ day.

The Putzlet woulda folded if he ever had to work that hard that long.
'Course he wouldn't have to worry about it because he couldn't build a
tank if his life depended on it. Hell, he still can't even figger out
how to string a simple wire antenna up in his own back yard and tune
it.

> >Like the time you tried to get me to put up an antenna at your house?

I am curious, Dwight...

Why would a person who purports to be "getting out of Amateur Radio" still
be lurking in Amateur Radio related newsgroups...?!?!

I guess it doesn't matter....With all your hamgear gone now the only noise
those speakers will be reproducing will be from KRUD-FM or 11 meters.

Where in the world do you get that weird concept?

Non-profit means there can be no profit, to pass on to shareholders (or
whatever).

You can have a non-profit organization that makes money. But, they have
to put the profit back into organization.

And any but really small non-profit organizations, such as the local ham
club, have staff. What they get paid may depend on the financial soundness
of the organization, but there is nothing to limit what they get paid simply
because it's a non-profit organization. I'm sure many non-profits would argue
that by paying a good salaray to key people, they are able to operate well.

Why did you have to listen? I find turning on my heel and walking away
does wonders. Or, looking the ranter straight in the eye and saying,
"You're just wrong...." (lookit how the oldest ranter here on rrap
reacts to being told he's wrong - which he often is....)

Besides, what it all comes down to is this:

Hams - old and new - didn't change the exam procedures. Neither did
ARRL, NCI, NCVEC or any other ham group. FCC did, because it saved
them resources.

We aren't going to a system other than multiple-choice
published-Q&A-pool exams in the foreseeable future. Just not gonna
happen.

I dunno, Jim. I can read a book, or I can look at a question pool. It's all the same to me. If you make questions up, you have to have a reference for them someplace. Is it in a book? fine, study the book then. Is it a question pool? Fine also.

Rote memorization? Seriously if anyone rote memorizes the General and Extra tests, they are very intelligent and very stupid at the same time. And they will have a few curves thrown at them at test time.

Well, it wasn't a case where I could or should have turned away. I supposed I could have kicked the person out, but I also needed the help he was giving on a task. Real life has a habit of modifying our behavior. Plus ut wasn't a personal attack. Most hams I know think I'm a relative old timer. But its still irritating.

Every once in a while, I'll mention something like "Hey, I resemble that remark!"

> Besides, what it all comes down to is this:

Just a thought here... If we were to say, go to a book oriented reference for the tests, I can assure you that it would be no better than the pool based system. Thousands and thousands of college students prove this on a daily basis, pulling all-nighters, cramming to take their tests. All the crammed knowledge is placed in shirt term memory, to quickly fade after the test is over.

Maybe the answer is to have on on one testing, where the test administrator comes to love with you for a week, to see if you *really* have knowledge of Ham radio....hehe.

I think you are very close in description... :-)

Either way, Steve the Stalker is indigestible. Ptui.

The Stalker's output is what I've come to expect in "reasonable
discourse" around here from the elite, privileged amateur extras,
the role-models of nobility and comportment in the New Ham
Radio. All are apparently expected to emulate them.

They changed "discourse" to just diss and cuss, plus all that
"manly" sexist-oriented commentary.

This isn't at all about the subject (BPL) or even close to amateur
radio...or even any radio. It is all about Steve the Stalker having
his sociopathic "fun" in being able to tell off others. Not good.

Heil wants to do the same thing but less scatologically. Rev.
Jim has to preach Old Tyme Radio Religion. Kellie, King of the
Katapults tries to sound off like a grizzled old sea salt but the only
salt he's ever been is from oral sex on a Margarita glass......

We'll just have to wait around for the Stalker's posting of the "health"
of the Olsen twins over hum raddio. [his latest fantasy] :-)

LHA / WMD

>And they will have a few curves thrown at them at test time.

Mike, the Regulations on privatized testing always specified a
MINIMUM of ten questions for every required question on a test,
amateur or commercial.

The test question pools were generated for the least amount of
lawful effort. For amateur tests the VEC QPC is responsible.

The amateur QP could have a hundred times the required questions
and the total would defeat all the "charges" of "not right" just from
the immensity of a memorization effort. [for all but the eidetic]

Increasing the QP size is perfectly legal under the law. :-)

It's not a question of longevity with Rev. Jim. He Is Right and won't
accept anything contrary to His Sacred Vision. :-)

It boils down to the OFs elevating themselves far out of reality on
"how good they were/are" in the way of the Sacred Olde Tests. If
They did it, it is "right." If it isn't done as They did it, it is "wrong."

That's the bottom line in all of these test issues. :-)

>> Hams - old and new - didn't change the exam procedures. Neither did

>their tests. All the crammed knowledge is placed in shirt term memory,
>to quickly fade after the test is over.

Mike, amateur radio is "different." It is different because the OF's
tests were the "correct way" to do it. :-)

Never mind that multiple-choice testing is accepted nearly
everywhere else (even done in the Sacred Olde Tests) by
academics and government agencies.

Amateur radio is not a hobby. It is much, much more that that to the OFs. It is a "service." It has "unchangeable" rules that must be kept always and forever the same lest it become "incorrect." :-)

Another poster has apparently just learned that COLEMs (the commercial test givers) "also have question pools!" Amazing. It's been that way since privatized testing began. But, it was just noticed! [anyone can look in the first bound volume of Title 47 and see the commercial license requirements except nothing about that or the three middle volumes are mentioned much in ham radio places...that has "nothing to do with hamme raddio!" yell the purists...:-)]

The anti-public-question-pool purists don't have much of validity in their "memorization" charges...but it's about the only one they can come up with...so they must push and push on that to justify their public words. :-)

More puffery and posturing, Steve?

Why should I sponsor those who lack the requisite motivation, committment, dedication, and all that other foolishness you wave about as required for a properly devout licensee.

Of course, at $750 per license term you'd certainly weed out all but the affluent hobbiests, now wouldn't you? (Another elitist 'outs' himself.) Sunuvagun!

With warmest personal regards,

At Barnes and Noble the other day I saw an electrician licensing
question pool. Seems what they do is important and they need to know
what they are doing.

> The anti-public-question-pool purists don't have much of validity

BTW, that surprise I noted for anyone that *was* stupid enough to rote
memorize the Extra pool is that the ABCD order of the answers is
sometimes switched. That would almost certainly throw the person off

balance if they didn't actually know the material.

Oh sheesh! Oh sheesh! that may be my worst typo yet!

I wrote this just after I replied to Steve about that lovely YL that worked for one of the Ham radio stores. Must have been a delayed Freudian slip.... I hope! 8^P.

I always like to have one good laugh a day. Today I made my own.... sheesh!

If you only care about right answers rather than understanding.

>Rote memorization? Seriously if anyone rote memorizes the General and
>Extra tests, they are very intelligent and very stupid at the same time.

Depends on the person and the subject. In some areas, the only way to know the material is rote memorization. (How long is a ham license term?)

>And they will have a few curves thrown at them at test time.

How? The test questions are all in the pool. Read the pool and you have seen every possible question and answer.

Heck, download the pool as a Word or text document, edit out the wrong answers, print the questions up on 3x5 cards and just read the dern things while in the room of many doors.

Remember the game "Trivial Pursuit"? When it was a big deal ~20 years ago, I used to carry a handful of the cards in my pocket and read them at odd times (on the subway, waiting for the elevator, etc.) Didn't consciously try to memorize them, just read them. I was soon nearly unbeatable - as long as the game used the Original edition cards.

The question pools have far fewer questions than the Trivial Pursuit cards did.

There was an old song called "Patches" that you may recall from high school
days. Man is remembering how tough he had it as a kid. Among the folks I grew
up with, we still use the line

"And then the rains came, and washed all the crops away"

whenever somebody starts geezering.

>> Besides, what it all comes down to is this:

> To you, yes. But to others, it may be very different.

Well, I only know how my mind works.

The exact process I used for getting my license was:

First I took an online test. First couple times did just awful. In both
General and Extra, I started out at about the 50 percent level.

Downloaded the question pool. Used it as reading material on the throne
and around the house. But mostly as a post-test reference

Continued taking the online tests. For every question I got wrong on
the tests, I researched out the answer. Sources were reference books and
the 'net.

Continued until I scored 100 percent pretty consistently.

> Which do you *really* think requires more understanding of the mateiral and the
> concepts behind it - a test where you don't know the exact Q&A beforehand, or
> one where you do?

All the same to me. And I think my method above says something more.
Being smart is not necessarily knowing something - it is knowing what
you know, knowing what you don't know, and knowing where to get the
answer so you *do* know.

>>If you make questions up, you have to have a
>>reference for them someplace. Is it in a book? fine, study the book
>>then. Is it a question pool? Fine also.
>

>
> *If* you only care about right answers rather than understanding.

Not really. I saw a electrician licensing test book with question pool
recently. Lives depend on the electrician doing safe and proper work.
and they are depending on the Electrician knowing.

>>Rote memorization? Seriously if anyone rote memorizes the General and
>>Extra tests, they are very intelligent and very stupid at the same time.
>
>
> Depends on the person and the subject. In some areas, the only way to know the

Of course, but that is diluting the issue. No other way to learn that
stuff.

>
>>And they will have a few curves thrown at them at test time.
>
>
> How? The test questions are all in the pool. Read the pool and you have seen
> every possible question and answer.

All my tests have been from the question pool, so it is something I
have some advantage over many people here. Actual knowledge rather than
opinion.

The answers are not always in the same order as they are in the pool. I
experienced this in my Extra test. And if the person knows the text of
the answer, they almost certainly *know* the answer. That takes a level
of understanding much greater than "This question's answer is "D"

> Heck, download the pool as a Word or text document, edit out the wrong answers,

Hey, maybe my dum typo was Karma! This might be the way to increase the
numbers of Hams! People would demand to be retested every year or so.
And the YL's could pick their own instructors........

Hardly, Jim.

Most of the allocations we enjoy are international allocations...not
domestic ones.

And I hardly think that even if our numbers fell by half that we'd lose
any significant part of our allocations...Not any more than what we stand to
lose right now anyway.

Unlike the Robeson clan, our branch of the human family tree has evolved beyond having tails, although it might come in handy to swing out to check the traps on my TH7. Would you consider hiring yourself out as a trap checker, as well as your day job as Len's little red-hatted organ monkey?

With warmest personal regards,

de Hans, K0HB

NOAH!

"I've been through the desert on a horse with no name, (with my shack
on my hip) It felt good to be encoded with S.A.M.E."

It got hostile when someone made fun of his shack on his hip and asked
him if he was a real ham. He said, "NOAA >>>IS<<< Amateur Radio!" and
everyone laughed at him. Again.

Hi, hi!

There was a looker in the flea market at Dayton a couple of years ago.
She was selling, of all things, a pneumatic tower!

C'mon, Deiter - you know how the game is played when someone asks
for professional advice -- tell them what the rules say and how to
get it changed if they don't like it.

The bottom line, though, is the rules mean what the rule-enforcer
says that they mean. Otherwise, one is "itching for a fight" <ggg>.

CEO's of non-profits are some of the best paid people around. When I
hear "non-profit," I think, "scam." Unless they can show the % of $
that actually makes it to the effort. Ditto Trusts and LLC.

> You can have a non-profit organization that makes money. But, they have

Ahhhhhh....the "ad hominem" attack...The very thing that you have seeminly placed yourself above...So it seems the Brakob clan has some issues with the truth also...

>(UNSNIP)...although it might come in handy to swing out to
>check the traps on my TH7.

Ohhhhhhh....."Mine is Bigger Than Yours"...?!?!

>Would you consider hiring yourself out as a
>trap checker, as well as your day job as Len's little red-hatted organ
>monkey?

Considering your own propensity for "Do As I Say Not Do As I Do", you'd better check your own backside for that tail, Master Grief. The NG has many examples of you uttering profound eruptions on what is "civil", "mature" or "adult", yet it seems you intend for those to be the responsibility of others...not yourself...Why?

(BTW...I can lower my traps to the ground to be checked...A lot cheaper AND safer to work on...)

>With warmest personal regards,

Still with sincerity issues, I see.

What Hans described would not take place overnight.

> And I hardly think that even if our numbers fell by half that we'd lose
>any significant part of our allocations...Not any more than what we stand to
>lose right now anyway.

Hans' scenario is quite realistic. If every ham in the database had to pony up $750 for a license renewal, plus every new ham had to cough up even more for the VE fees plus license fee, I think we'd see significant attrition. Much more than half. Heck, at the current level of fees we're barely growing!

What do you think a $750 fee would do to the recruitment of young people into ham radio?

Once the numbers dropped significantly, FCC could reallocate the domestic stuff. Look at 2 meters - half of it could be taken away without treaty change.

Then, when the next WRC came along, the administration would have plenty of justification to chnage the rules so as to take a lot more.

The FCC should cancel Amateur Radio altogether. With the amount of hams that are on the air these days, I wouldn't be surprised if Ham Radio is abolished within the next 50 years.

Echolink is the future of Amateur Radio as we know it, folks.

My gripe is why the hell do they have to be soooo early on the weekend? The weekend is my time to relax and sleep in a little bit compared to my workweek of which I normally have to be up at about 5:30am. If they were to start at say 10am instead of 7am or 8am like I see most of them start I might actually go to more of the hamfests..... (since I have to drive at least 1-3 hours to get to most of them.)

The other gripe is, personal hygiene..... is it really a huge inconvience for someone to grab a quick shower and toss on a little bit of antipersperant/deodorant???

I think a bigger problem is that some hams have absolutely no concept of depreciation!!!!

I saw lately a ham trying to sell some PC's that were in the 100-200Mhz range for over 400 bucks! Saw some others trying to sell some transcievers for about 30 bucks less than they sold for new, BUT the rigs were AT LEAST 15 years old. I can understand that if there are not alot of those rigs out there, but when there is a ton of a certain model, then the supply/demand theory goes out the window and doesn't demand such a high price.....

Well Jim, at the hamfests within our local area/state it seems to be a TON of junk, and not too much in the way of decent stuff from the past 10-15 years which is what I am looking for. It seems more like packrat mentality types finally trying to get rid of stuff from 20-30 years ago. Do I really need a damned Commodore 64 computer? I guess one mans junk is another mans prize..... My impression is that hamfests are the equivalent of a a yard/garage/rummage sale but for ham radio people. (private sellers, not dealers that is)

Good point, Ryan. It seems that the pressure to get the "great deal"
gets people coming out earlier and earlier. So many of the sellers
accommodate. But it is now at the point that its ridiculous. I've seen
sellers closing up shop at 10:00 a.m., and many shut down before noon.

If I ran a hamfest, I *would* start it later. Sellers just might find
some more business.

> The other gripe is, personal hygiene....... is it really a huge inconvience

How do you know that everyone stinks if you don't go to them?

At Dayton this year, I recall one person that wasn't morning fresh.

At Rochester, I didn't notice anyone.

At Butler, the same.

At the fest near Scranton PA, there was one person that didn't quite
meet sanitation standards - well okay, he actually really really stunk.

No doubt there were some others, but it's an awfully small percentage.

But you can run into that sort of thing at any flea market, be it Ham
or otherwise.

615. Re: High-Speed Internet Access for Rural Areas - The Right Way (not BPL)

Newsgroup: rec.radio.amateur.policy
Date: 2004-07-13 14:10:13 UTC
From: "Ryan, KC8PMX" <NOSPAMkc8pmx@NOSPAMcharter.net>
Message-ID: <10f7raaahpmb562@corp.supernews.com>
Source record: 94290

Hello Dan, (and others in the group)

A question about something I have been thinking about.....

If BPL seems to be intended to be offered at a price not too much different that DSL or Cable connections, why are we (or any representative groups) doing presentations with the companies that offer Cable/DSL services?? Seems like those companies are the ones in direct competition for service. Since Cable/DSL isn't offered EVERYWHERE but is offered in most areas, as BPL (in theory) would also be available in all areas where there is power lines, it seems like the BPL folks could sell to those who necessarily are NOT in the rural areas too.

Also, what about commercial broadcast such as AM radio?? In my area alone, power lines radiate a TON of interference already BEFORE BPL. If a broadcaster truly knew that their signals weren't as effective as they were before BPL, they might also want to get on the anti-BPL bandwagon.

Lastly, what about emergency services frequencies? From what little I do know about BPL, the frequencies and their "possible" harmonics could affect their frequencies, at least to interfere with their repeater systems..... Police and fire chiefs have alot of pull, especially when they get together in groups.

Just some thoughts on the issue....

November 2006 has a lot of expirations too - around 11,000.

Any idea on what the cause for the surge in licensing at that time? And I wonder if it was from 1996, or an earlier cycle?

I would have thought that the expirations would have mostly been Technicians, but the majority are Extras. Interesting.

I would agree Phil, as that seems like the type of thing we SHOULD be able to do as it would be in both the general public (with scanners) as well as the ham radio public's general safety interest.

Also, AMBER alerts could be included as well as the HOMELAND security stuff..... With AMBER alerts, the information could be shared within an area affected, and if a ham sees the child, they could be trained to call the authorities. (not take matters into their own hands....)

> What "help" did the ARRL do in Cedar Rapids, Iowa?

Filed a complaint with FCC that helped get the system shut down.

> Identify that "help."

From "Amateur Radio Newsline" of July 2, 2004: (Note that ARN bills itself as an alternative to ARRL, and is hardly a cheerleader for the League.)

Quoting:

"BPL: SCORE ONE FOR THE GOOD GUYS"

"A major broadband-over-power line pilot test by Alliant Energy in Cedar Rapids, Iowa is shut down after local hams document the harmful interference and the Federal Communications Commission gets a formal complaint from the A-R-R-L."

(some snipped)

"It took nearly three months to accomplish the mission, but amateurs in Cedar Rapids - armed with ample data and the muscle of the American Radio Relay League - convinced Alliant to prematurely halt their B-P-L test."

"Jim Spencer, W0SR, first discovered the interference on his HF radio right after Alliant launched its B-P-L testing March 30. Spencer, who quickly mobilized other Cedar Rapids hams to form a technical committee, says the interference was so severe that it wiped out his and others' ability to use their radios."

"Spencer says the group worked with Alliant officials to try to resolve the interference and conducted several test measurements with the utility's cooperation."

"Spencer tells Amateur Radio Newsline the group appealed to Alliant to shut down the system and stop the interference on several occasions."

"But it was clear the B-P-L industry was telling Alliant's managers something else."

(more snipped)

"Spencer says communications between his technical group and Alliant officials were civil, but they accomplished little action. He says he

and others filed complaints with the FCC. "I think in 21 communications I received one simple response basically told me to go back to the power company - the operator of the system," Spencer says. "And, of course, I had done that all the time."

"So, we had been asking the utility company to close it down, we had been asking the FCC to help us and then the ARRL went and escalated that.""

"Wade Walstrom, W0EJ, is the ARRL's Midwest Division Director.

He says the league's FCC complaint finally got the utility's attention."

""The thrust of the complaint was that they were now aware that the system was causing interference and didn't shut the system off so now that makes it willful interference," Walstrom said... Alliant stopped the B-P-L pilot test on June 25 saying it had gathered the necessary data to make a determination on whether a general rollout of B-P-L would be worth pursuing, according to Spencer."

(rest snipped)
>
> The Cedar Rapids group WENT OUT AND DID IT BY THEMSELVES.

No, they didn't. It was a team effort, and ARRL was on the team.

You're just plain wrong about the "did it themselves" part, Len.
>
> They TOOK ACTION.

And it wasn't effective until ARRL filed the complaint.
>
> They didn't go around mumbling catechisms for the league and do
> nothing. THEY DID SOMETHING.

So did ARRL.

What have you done, Len, except stuff the FCC's inbox with spam? ;-)

Here's another bit of news you may find interesting, Len:

http://www.qrz.com/cgi-bin/ikonboard.cgi?act=ST&f=3&t=65515

They're the Reply Comments of a young radio amateur. Just graduated from high school. Very well written, to the point, and hopefully effective. And he's just 18. You would never guess it from the writing style.

But he's not a newcomer. According to his QRZ.com profile, this ham was licensed at the age of 10 and has been an active radio amateur ever since.

If Len Anderson (a life-long non-radio-amateur) made the rules, that young ham would have not been allowed to hold any class of amateur license until he was at least 14 years old.

Kinda says it all.....

Hey, no sweat piece of cake Brainiac. If, say, I needed a trough
access plate or maybe a cat track cover pulled I'd explain what I
needed to the responsible CPO or to the V5 division maint officer and
it got done. I've seen the same drill at the Wright Pat engine labs by
their civilian engineers / USAF saregants and officers. That's what we
all get paid for Brainiac, it's SOP everywhere.

But what would you know about any of it, it takes some brains to be
allowed anywhere near these sorts of military activities. Which is why
they kept you out on the shipping dock where the worst damage you
could do was send a box in the wrong direction here and there. The
USAF version of a UPS depot package sorter.

> I thought you were in with the Skipper so you wouldn't have to deal
> with Chief types? Idiot.

No Putzlet, I did not state that I had "an in" with the skipper, not
even close, that's another inane fabrication on your part. What I said
was that I was required to introduce myself to the skipper and his XO
when I reported aboard period. Try harder to get at least something
right once in awhile.

> Why does your story change with each new telling of it?

It ain't changed in thirty five years Putzlet 'cause that's the way it
was, deal with it.

> > The Putzlet woulda folded if he ever had to work that hard that long.

Remember that many of the vendors may have a very long drive home and so have to be out of there by 1pm or so. Besides there is nothing stopping you from coming in at 10am instead of first thing in the morning. In the private sales, prices are starting to drop by then anyway.

I note that you said "trying to sell." I bet they were still sitting on the table at the end of the day. Hamfests are poor places to get that high a price out of the equipment as the prospective buyer merely needs to go "across the aisle" so to speak to get a new one at very little more.

Price dropping when there is a glut is certainly part of the supply & demand principle.

Low supply + low demand = medium price
Low supply + high demand = high price
High supply + low demand = low price
High supply + high demand = medium price

However anyone trying to sell a typical 14 year old radio who is trying to get nearly new price will wait a long time. The most I will ever pay for used gear, except under very special circumstances, is 1/2 to 2/3 the new price. If they won't sell for that, I'll buy new and get a warranty.

The ARRL is following many of the avenues you suggest. It would be a good idea to send your list to the ARRL however in case they have missed some.

As for BPL for rural areas, that's pretty close to an outright lie. The BPL companies can't just send it over the power lines with no further ado. Every transformer has to be bypassed. Every mile or so there has to be a signal booster. And so on. Rural areas would be the last to get it and would not get it for a decade or longer as it would have to prove financially productive in the cities first.

So let's all move to farms! (I wish)

Mike,

I have no idea why. Maybe Jim does. The original total expirations
for July before the renewal phase started was upwards of 13K or
more. Several thousand have obviously renewed, but there's still a
big number that are probably gone.

Cheers,
Bill K2UNK

Wasn't it about 1996 when the FCC stopped issuing a new ten year term whenever someone had to change their address or such? Today you can change your address, get an upgrade or such but your expiration date doesn't change. SO that increase of expirations is likely the amount of address changes or upgrades that used to get new ten year terms before. Myself as an example: I upgraded in 2000, but I still expire in 2006. Back under the old system, I'd expire in 2010.

There being extra extras expiring in 2006 is likely people who upgraded at around Restructuring Day.

Hello me ????? oh well ....

Yepper you got that one right ....why put up a 5k antenna system, a 2K rig and then invite the ire of all the neighborhood when they say they see you on HBO ..... when they can't start their car in the morning or when their pets start acting goofy etc..etc ???? One can easily grab a mike an yell into a $400 computer with a $9.95 ISP and have a heck of a lot less aggravation. But so goes life as we know it here .....minimize the hassel but also minimize the "mental gymastics" that should keep our own computers working well.

There are less ops on the air than in days gone by but that is also true in many other endeavors that I read about on the newsgripes. It appears that the computer or our life styles have caused many "hobbies-services" to take a hit.

Take care me ...oh I mean you ....ah you know what I mean ....

I don't recall anyhting special about that date. One possibility was
some kind of rules change or paperwork logjam that caused an unusual
number of renewals to fall in the same month.

> The original total expirations
> for July before the renewal phase started was upwards of 13K or
> more. Several thousand have obviously renewed, but there's still a
> big number that are probably gone.

Maybe.

But recall that the way the AH0A site works is that all expirations
occuring in a month are counted as happening on the first day of that
month. Then, as renewals occur, the number grows. IOW, *every* weekly
counts shows a big drop, then the number climbs.

Will the number climb high enough this month? I don't know.

How's that more accurate, Bill?

It's always possible that the test system could change. Not very
probable, but possible.

But I wouldn't bet on it.

>NOT in the rural areas too.

The present-day Access BPL test areas ARE in urban areas, not
rural. That's where BPL will have the best chance for revenue.

>Also, what about commercial broadcast such as AM radio?? In my area alone,
>power lines radiate a TON of interference already BEFORE BPL. If a
>broadcaster truly knew that their signals weren't as effective as they were
>before BPL, they might also want to get on the anti-BPL bandwagon.

Access BPL is reputed to operate above the AM BC band and
stop just before the low end of the FM BC band.

Some of the "VHF channels" of U.S. TV will get the high end of
BPL interference. However, many of thpse VHF TV channels will
be moved once the cut-over to DTV is complete.

The FCC presently has another NOI open on using those open TV
channels for broadcast broadband data.

The FCC has NEVER been aggressive on making electric power
companies cut out their RFI from power lines. That was before any
BPL or PLC was devised. It hasn't changed.

>Lastly, what about emergency services frequencies? From what little I do
>know about BPL, the frequencies and their "possible" harmonics could affect
>their frequencies, at least to interfere with their repeater systems.....
>Police and fire chiefs have alot of pull, especially when they get together
>in groups.

Several groups have "spammed" the FCC with their Comments on
this and the interference to already-established emergency services.
[Rev. Jim calls all such Comments for "spam"]

The major BPL RFI effect to emergency services is on the "low VHF" PLMRS at 30 to 50 MHz. The "high VHF" PLMRS band is relatively unaffected by reputed Access BPL bandwidth.

>Just some thoughts on the issue....

Good thoughts on that! APCO was concerned last year and still is. A few other groups have "spammed' the FCC on the subject and all are visible to the public at the FCC ECFS, docket 04-37.

>What an idiot. I think he's nuts or at least candied cherries.

Maraschino Mania!

He IS on something fer sure.

The Stalker can't confirm his claim of "knowing" anything at Naval Air
Development Center of 1970-1975 other than there was a small NAS
across the side road from the old NADC buildings. He doesn't know
the projects under work then, nor the lab managers, nor much of anything
else. He - and Kellie the Katapult King - still think I was an employee
there! [I was working for RCA EASD at the time]

>> Also now awaiting your credentials in law for making the assertion that

>> you venture into without any experience, Lennie.
>
>Len, legal guidance is not that expensive, especially when the libeler
>brags of excellent income from nursing and disabilitie(s).

It's amazing that a single morsemanship credential can be the catalyst
for such an amazing fantasyland of Fruitcake Fred, the Stalker Man!

>> In the meantime, we are still subjugated to your mistruths, antagonisms
>> and overall misrepresentations of Amateur Radio...all in the name of
"freedom
>> of speech".
>
>Len, ditto trying to "out" people who are neither homosexual nor child
>molesters.

It must be The Stalker's poor muddled mind - still suffering post-traumatic
stress syndrome from all those 'hostile actions."

Anyone not thinking like The Stalker is a pervert, pedophile, or a
philatelist.
[his fantasyland gives green stamps with each idea purchase]

>> Luckily for you, lying is protected speech.
>
>Len, do you think lying is protected speech? I don't think it is.

The Supremes will probably rule it is.

Doesn't matter. Poor sumbish is so far gone he doesn't know right from wrong. Sociopathy is like that.

I guess we'll just have to wait for that "pickup" by mental health folks in our respective states when The Stalker "makes his call" to have us picked up. :-) :-) :-)

Meanwhile, Rev. Jim thinks all I do is "spam the FCC" with Comments, all of which are "wrong" and the Katapult King is in high society of the military. Geez, all these OFs have nearly the same level of fantasyland that Fruitcake Fred, King of the Stalkers has!

Only Ryan is trying to stay on the thread subject of BPL. I'd like to also, but this newsgrope is filled with Hostile Action FIGHTERS! :-)

>Len, are you getting all of this homosexual inuendo stuff?

Yeah. <yawn> Same old, same old crap on the newsgroups
when some schmuck can't reply on a subject - just heap
abuse on the person doing the replying.

The only variety is the KIND of abuse they use.

>Wonder when the child molestation inuendo starts?

It started right after the Stalker (busy stalking away) saw your
post, saluted smartly and went to work on a "reply." :-)

He thinks he is cleansing the newsgroup of non-ethnic minorities.

Slobodan Milosovic is one of his heroes...

>Wonder why this guy has a screw loose?

All his trimmers are snugged down to military-approved torque
levels in a CW direction. Nothing loose. Nothing works right,
either! :-)

>Maybe we ought to be talking to his VA service center.

A Chebby shop and Mr. Goodwrench will have more correct info.

The Stalker is not interested in talking on BPL or any REAL ham policy subjects. He just wants to scrub, scrub, scrub, in the ethnic cleansing First General Order so that he can claim one more "hostile action" event! In other words, all he do is FIGHT.

:-)

Interesting that The Stalker has mentioned 3 warehousing areas of the
USMC in California, all of them rather well inland. Now Kellie, the
Katapult
King has, along with the Stalker, accused us of doing "clerk" duties while
in the military. Those two important heroes of the U.S. military seem to
have no information about military duties other than clerking!

Sunnuvagun! :-)

Nancy says "Hello...and just say NOAA..."

No comment?

It's been perfectly legal to make the QP much larger than 10 times.
Since at least 1997...when I got the first access of all bound volumes
of Title 47 (five total). Everyone seems to think that 10 times the
required number is all that can be done... :-)

>what they are doing.

"Electricians get into other people's shorts." - anon. tagline

Residential electric power wiring is rather straightforward, established,
and standardized. By most local government codes. It IS important
since faulty wiring can lead to destruction of an expensive residence
and, in apartments and condos, loss of many other units.

Electricians are professionals. They aren't amateurs. They don't
belong to a noble "service" to the country, etc., etc., etc. :-)

>> The anti-public-question-pool purists don't have much of validity

>memorize the Extra pool is that the ABCD order of the answers is
>sometimes switched. That would almost certainly throw the person off
>balance if they didn't actually know the material.

It is NOT good mnemoics practice to do memorization that way, by
abstract relationships of letters to known questions.

I suppose it can be done, but the effort is much, much greater to
achieve any sort of accuracy in recall.

On the other hand, if the method achieves the success of being given
the High Prize of a ham license, then they are One Of You. :-)

Such meaningless memorization is only slightly behind the blind,
unswerving loyalty to the Church of St. Hiram in Newington, isn't it?

The blind belief that morsemanship is the ultimate skill achievement
in radio communications of this new millennium seems to be one of
the dumb and dumber aspects of modern U.S. radio amateurism.
Even dumber is that a morse-based NTS is somehow a "backbone"
of national emergency communications...or that on-off keyed morse
code "gets through when nothing else does."

Hello Bruce. How've you been?

Maybe Ham Radio just isn't going to grow. It's been kept as a legacy
mode for too long.

Mike, that's probably about the time that Bruce/WA8ULX took the Extra
Exam that he wasn't going to take because he wasn't going to go for
Extra Plusser. He's posting below, so you might want to ask him why
all the Advanced's were upgrading at that time.

Never worked the Procurement/Loggy side of the house. I was always in
Operations where we cussed the contractors, not "obey" their orders.
Hi, hi!

> But what would you know about any of it, it takes some brains to be
> allowed anywhere near these sorts of military activities.

Yep, I watched on tv the other night as a sailor got sucked through
the intake of an A-6 and lived. I hope they kept you away from the
A-6's.

Which is why
> they kept you out on the shipping dock where the worst damage you
> could do was send a box in the wrong direction here and there. The
> USAF version of a UPS depot package sorter.

I tagged my own pallets. Kept track of them as best I could without
"in-flight visibility." That was merely a vision.

So your father and your neighbor lied about military experience that
they didn't have? The apple sure don't fall far from the tree. Hi,
hi!

Anyway, no grasping required. You got into an argument with one of
your CB buddies and immediately layed your "military experience" ot
for comparison.

Hint: You can't compare what you don't have.

It's all in google - if you dare dig it out.

Given your dismal performance in ham radio

Deiter, if it occurred on a regular basis, then it would not cause
alarms to go off. It occurs only occasionally. And alarms then go
off.

What use would an alarm be if it occurred on a regular basis?

Exactly!

If somebody has a nice clean late-model rig, which venue do you think will
bring a higher price: a typical hamfest or eBay?

I always go late to hamfests. Now, as someone pointed out, there are some bargains to be had from that approach, but the truth is I'm a late riser. All those early risers will probably miss the end of hamfest bargains because they will have got tired and gone home. That old tube I have been looking for may be gone before I get there, but c'est la vie. There are pros and cons with either approach, so just go with what suits you and don't take things too seriously.

Good for him.

But I'm not concerned with "worthy". If I'm going to have to "love with
them for a week" as Coslo proposes, well then ......

Your're kidding, of course. There is only one candidate that he would even think of voting for. The one that wants to kiss and make up because we have been "bad boys" and thinking evil thoughts about Bin Laden.

And the winner is (drum roll please) Kerry!

ANd then there's the question of what knowledge should be expected from
applicants anyway. Does it really require more knowledge and skill to
operate on 14.167 vs 14.344?

More spectrum is simply the reward system in use. It was chosen in large part
because it's easy to enforce.

What about Nader?

Let's see...OBL wanted SH kicked out of Iraq - Bush did that for him. OBL wants people to see the USA as "the great satan" or some such, invading their holy areas.....Bush did that too. OBL wants the West to be dependent on imported oil and pay higher prices for it....and the USA has no real energy policy except "keep gasoline cheap".

Makes ya wonder....

>selling price, either on the high or low end, but it looks as if sanity
>may be coming home in Ebay.

Some forces are at work there:

- eBay hit big back when the economy was booming and people had lots of
confidence in their financial futures. It wasn't that long ago that "retire at
55" was a catchphrase - and if the markets had kept climbing, it would have
been reality for a lot of folks. But since boom-dot-bust hit, there are a lot
more sellers and fewer price-no-object buyers

- eBay was a new phenomenon back then, too. Equivalent to a 24/7 hamfest. I saw things for sale on eBay that I'd never seen in 37 years of hamming, like the famous-but-overrated-in-my-opinion SX-88. Such a new environment is a perfect setting to make things appear rarer than they really are, and prices followed. Now, people have learned that if something was on eBay once, it's a very good bet that sooner or later another one will show up.

- The inital impact of eBay was to raise a lot of expectations about price. The first SX-88 I ever saw on ebay went for over $6,000, and the bidding was furious. I'm sure a lot of folks saw that auction and went away with the thought "an SX-88 is worth $6000" But less than two weeks later, a second SX-88 showed up and went for less than $4000. People remember the high price but forget the low ones.

If you been in a radio club, you've seen your share of characters.
Ham radio has no shortage of all types of personalities.

Ever see this guy before? He just joined our club.

Comes to first meeting. It's pretty obvious he's is the hyperactive overbearing type, talks constantly & loudly, dominates the discussion. Says he quit such & such club because "they didn't like this and didn't want to do that, they were a bunch of losers." Shows up second meeting & proposes all sorts of changes to what the club has been doing, wants to start this & do that, & go here and there. Volunteers to head up all the committees, wants to bring in outside speakers that will offer this or that to the club members. (The outside speakers are family members or buddies of his). Does the majority of speaking at the meeting. Again, makes mention of how his last club was a bunch of losers and how happy he is to be a member of this great club! At his third club meeting, he does ALL the talking and is the center of attention. Some club members say they like him, others remain silent. Can't wait to see what happens at the fourth meeting with this guy. We're betting he will run the entire meeting himself.

A. I see our club breaking up, because some will agree with this guy and others will want no part of him.

B. I see this guy being challenged and told to shut up, which will probably result in him leaving our club, since we're all "losers."

Have you seen this guy before? Has he come to your club meetings?

Tony

On the contrary, when copying for a speed test (verbatim hard copy) 5 letter coded groups are FAR easier to copy than plain text. Most Navy operators could copy coded groups at a about speed 20% higher than plain text press.

Not only was it easy to enforce but it was selected because it was a
desireable enough reward that people would put in the training to get it.

Most rewards in the real world have little relationship to the work
requested. You see it in the home too. Kid asks, "Dad can I borrow the
car?" Parent replies, "After you mow the front & back lawn and run the
edger." There is absolutely no relationship between the two activities.
The kid gets a highly desired reward for work that he/she probably doesn't
care to do but does it anyway to get the reward.

Another thought is that at HF frequencies, a inexperienced or poor
operator can propagate their signal over the whole world. If I were to
be making a training ground for amateurs, it would be using line of
sight type signals

I would still recommend one as an example of a simple computer. A
person that spends a couple weeks with an old C-64, and learning a
little basic can move to newerfasterbetter with some idea of what is
going on in the thing.

I am probably the only person in North America that would recommend
such a thing....

I had two experiences on Ebay. Was nailed both times. Once buying, once selling. My recourse? Leave negative feedback.

If you haven't, that's great.

Ebay won't be really clean until they are held accountable for the shenanigans that go on there. Once something big enough happens, that will happen

Utter nonsense, Mama Dee. Spin-like rationalization.

AMATEUR radio is a hobby, not a national service, not an arm of the United States Navy or the rest of the military, and not a public safety organization. Just a hobby involving radio.

AMATEUR radio long ago CEASED to be a "pool of experienced morse operators" for any national need. The nation does NOT need morse operators, haven't for a long time.

>Most rewards in the real world have little relationship to the work
>requested.

More spin crappola. The influential morsemen at the League managed to carve out a separate little morse playground for themselves with all sorts of fatuous phrases of "national need" and "importance of a pool of trained operators" and the FCC caved in to their demands.

>You see it in the home too. Kid asks, "Dad can I borrow the
>car?" Parent replies, "After you mow the front & back lawn and run the

So, the League is a surrogate parent?!? I don't think so.

Are all the Amateur Extras surrogate parents now? I don't think so.

Dee, quit this infernal nattering about "parentage" and ham radio.

Quit trying to sound off like you've got an influential pair. You aren't
a radioactive au pair and this ain't the Children's Hour (even is some of
the other extras act like children).

Just face the reality of the matter. Morsemen got their little CW
playground and should be happy. Professional communicators they
ain't, even if they want, desperately, to be oh, so very pro.

>because it's easy to enforce.

Nonsense for the new millennium.

The separate, elite morsemen-only portions of the ham bands were
put there by old morsemen who were able to influence League
lobbying.

What is this "easy to enforce" nonsense? The FCC reads morse
easier than it can voice? [I don't think so] Can the FCC DF on
OOK-CW signals "easier" than voice signals? [I don't think so]

All of the morsemen's propaganda is just spin to keep their little
morse playground. No more, no less.

You will be angry and disturbed at such direct language, but, like
Ernestine's creator put it..."plbthththt...and that's the absolute
truth." :-)

No, but I've seen enough of that type to know that they are bad news.
Your "great club" will be great as long as he gets his way, but perhaps
not even then, as this type of personality cannot be pleased for long.
Do what you will, but in 6 months, a year, whatever his particular time
frame is, all that will change. He'll want to kick the president out of
office because of one reason or the other. The sad thing is, he'll
probably be able to get plenty enough people on his side. Then after the
prez goes, he'll fixate on another so called loser. But inevitably,
he'll quit. No one or group can ever live up to his expectations. The
combination of the continued bitching about the previous club, and the
hyper aggressive early behavior are dead giveaways.

No normal person tries to change a club at their second meeting.

You really do have a serious problem. Best approach is to either dump him, or to try to channel that seemingly boundless energy.

The first solution is the best.

Some people might say "people complain about no one wanting to do anything, and someone shows up that does, and you want to get rid of him." But that isn't the case. You're dealing with an off center character here.

Oh yes. Once in a great while somebody like that shows up. Sometimes
they do it on a larger scale than the local club - Wayne Green is a
prime example.

> with this guy. We're betting he will run the entire meeting himself.

Does your club have officers and a formal agenda?

The trick is to let him actually *do* something. Let him bring in the
speakers or run the committees.
>
> A. I see our club breaking up, because some will agree with this
> guy and others will want no part of him.

Give him a chance to show what he can do.
>
> B. I see this guy being challenged and told to shut up, which will
> probably result in him leaving our club, since we're all "losers."

The trick is to give him an outlet for his energy.
>
>
> Have you seen this guy before? Has he come to your club meetings?
>
He's nothing new. In the "Rotten Radio" stories of 80+ years ago

"T.O.M." describes the cast of characters at most radio club meetings.
Your new guy sounds like "Final Authority".

Put him in charge of getting a speaker and see what happens.

AT&T: Plug into power sockets for high-speed Net
Last modified: July 14, 2004, 11:55 AM PDT
By Ben Charny
Staff Writer, CNET News.com

AT&T and Pacific Gas and Electric demonstrated Wednesday how broadband can be sent over power lines, an emerging alternative to cable and DSL for delivering high-speed Internet access.

As part of the demonstration, at AT&T Labs in Menlo Park, Calif., the companies created a connection operating at 500 kilobits per second to 3 megabits per second over a power grid. AT&T intends to send voice calls over that link using voice over Internet Protocol (VoIP) technology, among other applications, the company said.

Because electricity travels at a lower frequency than Internet signals, the two can coexist on the same line without interference. Power lines are also an attractive broadband delivery system because they are already in place and reach more homes than either cable systems or telephone lines.

Federal Communications Commission Chairman Michael Powell attended the demonstration. He has said that broadband over power line (BPL) technology makes it "theoretically possible to reach every power outlet in America with a broadband connection." The FCC is under pressure to substantially increase the number of U.S. homes that have broadband, which now stands at about 29.2 million.

AT&T and other local phone companies support the technology because it doesn't rely on the local phone networks owned by regional Bell operating companies BellSouth, Verizon Communications, Qwest Communications International and SBC Communications.

Phone competition rules that set cheap rates elapsed last month, so the Bells are expected to charge more for access. Accordingly, alternative "last mile" connections into homes, such as BPL or wireless broadband, are getting more attention, AT&T executives said.

But BPL still has problems. The technology can be unreliable, and it's still very expensive. These two drawbacks have tempered its use.

Current Communications Group and Cinergy Broadband, a subsidiary of a Midwestern utility with the same name, in March teamed up for one of the largest commercial rollouts of BPL. However, there are about two dozen ongoing trials of the technology throughout the United States, AT&T said.

>letter coded groups are FAR easier to copy than plain text.

Well, Hans, IIRC the test standards usually worked the other way. IOW the required speed was higher for plain text than for coded groups.

However, that doesn't necessarily mean it was harder. Since truly coded groups lose the advantage of variable-lenght (Hoffman?) coding, that could account for the speed difference.

It does make sense that copying code groups eliminates the need for one skill: figuring out word spaces. You *know* that each group is 5 characters long.

>Most Navy
>operators could copy coded groups at a about speed 20% higher than plain
>text press.

Well, that proves your point. Perhaps the difference in percevied difficulty comes from the fact that most nonmilitary CW ops don't get a lot of practice on code groups.

So I'll revise my statement:

"Whether code groups or plain language is harder to copy depends entirely on the operator. Those with extensive experience in both report that code groups are actually easier to copy."

Thanks for the info.

Wanna bet that Mister Powell did not deign to stop in to the FCC
Field Office out there to meet or support the staff and that none of
the three interference-chasing engineers assigned to that office
were invited to the demonstration?

Selling BPL is not a technical problem, it's a political problem.

SOme kids and others may decide that the reward is not worth the trouble
and time needed to do the required chore. If it's an option, vs having
to take some stupid class in HS or college because some curriculum
committee decided that it was necessary. Not graduating is not
a desirable option. I had to take 3 years of Spanish class in HS, but
as I don't own a landscaping company, it was a waste of time. :-)
Japanese would have been a better choice, but they didn't have it.
Some kids may feel that they are saddled with non-optional requirements
may decide to edit out of their lives any optional requirements and
forgo the ham license or similar.

At one club I belong to (not radio, but here we are talking about human interaction skills) a prospective member needs to visit and participate in various activities (mostly informal and not at all arduous tasks) for 8 separate club meetings (most meetings are informal gatherings in the club house Tuesdays and Fridays) (need not be consequitive). The purpose of this requirement is to get to know the new guy and to see if we get along and like each other. Someone obnoxious like the above radio club member is less likely to be invited to join after 8 visits. And he as a visiter would not be able to commandeer meetings and the club. This filtering process has worked well, and we haven't had any serious interpersonal problems (fist fights and such) happen. And we have a diverse group of people anyway.

Once this guy decides that you're a club of "losers" and leaves, consider installing a new member filter like this.

It's all that "combat training" he got in Barstow. :-)

You know, moving all those olive drab boxes around while wearing
spit-shined boots and sharply-creased fatigues.

That little Barstow station is a far distance from a REAL combat
training area, Fort Irwin, the Desert Warfare Center.

Barstow is HOT. Thermal, not action. He might have gotten
sunstroke in addition to post-traumatic stress disorder.

> It does make sense that copying code groups eliminates
> the need for one skill: figuring out word spaces. You
> *know* that each group is 5 characters long.

That's one factor, but a more important one is that the operator copying coded groups has no temptation to 'understand' the message being copied. This has two implications ---

1) The operator will not (consciously or unconsciously) attempt to anticipate the word being sent, thus will not get 'flummoxed' when the expected word is incorrect (for example hearing 't h e s' he might expect the word to be "these" and transcribe it that way, only to have it turn out to be "thespian", causing him to drop out of his "zone" to fix the error, perhaps missing the following word.

2) If the operator is not trying to 'understand' the message being copied, the mechanics of copying become more 'automatic' with (as one old telegrapher described to me) a mode in which "the message follows a short circuit between the eardrum and the fingertips without passing through the brain". From this mode come the (true) tales of operators who could seemingly "multi-task" copying Morse at a subcounscious level, and carry on other activitives like carry on a conversation, retune the receiver, or read a book at the same time.

Actually, there is a relationship - or connection might be a better word.

You're right that driving a car doesn't require lawn-mowing skills or
accomplishments.

But in the case cited above, Kid is part of the family. In order to use the
family's resources (the car, which Parents bought and paid for) Kid has to
contribute something - in the cited case, the lawn care. The relationship
between the car use and the lawn care is one of responsibility and being part
of a group.

Have you ever seen a family where the kids are given everything they want but
not required to contribute anything? Ever see what sort of adults those kids
become?

Well, there was T.O.M. himself ("The Old Man" - radio back then was a young
man's game, and someone over the age of 40 being involved in it was almost a
fossil). There was Young Squirt, with all the enthusiasm and optimism of youth.

If the resulting "reward" isn't worth the effort, then the person doesn't
really want it bad enough and won't be much of an asset anyway. Shear
numbers really don't help in any activity.

Excellent. We can apply that similar logic to amateur radio requirements. The spectrum is a public resource. The prospective ham needs to demonstrate that he has the potential to be a contributor. This is accomplished by the testing process. The connection is then similar: demonstrating the potential for responsibility and being part of a larger group. Notice that I tag it as potential since there will always be a few who are willing to put in the effort but then end up being problems.

That's an intresting point. 9/11 showed the need still exists for
experienced radio operators who can communicate under pressure.
Morde code is no longer necessary, but a clear voice, understanding
a phonetic alphabet, etc is.

Having a pool of responsable well trained and practiced radio operators
is still needed. They get that training on VHF/UHF repeaters, not operating
morse on HF or contests, etc.

Skills leared from contests are helpful, such as being able to dig a specific
signal out of the QRM and noise, etc, but the majority of operators don't
need it.

> Just face the reality of the matter. Morsemen got their little CW
> playground and should be happy. Professional communicators they

That's about it. If they want to keep morse active, they should encourage it,
not discourage it. How many hams are on the air that say that they learned
morse code for the license and haven't used it since?

I never thought I'd say that about myself, but unfortuntely it is true.
I've tried to get my speed back up to something reasonable and expect
that it would take an hour a day for at least a month.

Peopl who work 9-5 5 days a week may actualy be able to do it. I don't
(more like noon (or eariler) to 3am).

Geoff.

> Have you seen this guy before? Has he come to your club meetings?

No. The club to which I belong is a large regional DXing and DX
contesting .org with filters. Nobody simply walks in off the street
and signs up. First at least two existing members must know a
prospective member personally and about his/her dxing and contesting
activities and sponser them for membership. The prospect must attend
at least two meetings before his/her membership is even considered.
Usually toward the end of the second meeting the prospect is sent out
into the hallway while the attendees discuss his/her's particulars and
potential for making contributions toward the club's objectives and
vote yea or nay on his/her application for membership.

These rather Draconian filters work for this particular club which has
been around since 1927. The purposes of the club are very narrowly

targeted at specific operating activities so there is very little thrashing around about what to do next, establishing committees, what we should and shouldn't be doing, meeting speakers, etc. On those very rare occasions when somebody went over the edge verbally at a meeting the various Presidents we've had over the years simply cut it off by taking the floor back.

We all know what the meetings will be about before we get there. The srategies and tactics to be used in the next major dx contest and that's about it and outta there. In 35 years I've never had to sit thru the usual Secretary & Treasurer droning-on sessions at a meeting with "reports".

We don't get involved in Field Day, Emergency comms, walkathons or any of the rest of the neighborhood radio club staples. Those members who get into these sorts of acitivities do so as members of their local neighborhood clubs.

The jerk filters this club uses are probably too stiff to fly in any conventional neighborhood club but implementing some bits and pieces of it might cut back on the kinds of problems you've described.

Geoffrey, you'll notice Lennie interjected "morse" operators, although he does take great liberties with trying to discredit Amatueur Radio at any opportunity.

Additionally he was in error that stating that "Amateur radio long ago ceased to be a "pool of experienced morse operators" for any national need."

Indeed Amateur Radio is the ONLY pool of Morse capable radio operators remaining, the very small contingent of military and SIGINT operators not withstanding.

>Having a pool of responsable well trained and practiced radio operators
>is still needed. They get that training on VHF/UHF repeaters, not operating
>morse on HF or contests, etc.

That's why they are spending tons of bucks on the Emergency Communicators course. Also, here in Tennessee, funds were allocated to equip EVERY hospital in Tennessee with at least one VHF/UHF and one HF transceiver, along with funds to get folks qualified to use them. I don't know if that program is a TN-only program or not.

>Skills leared from contests are helpful, such as being able to dig a specific
>signal out of the QRM and noise, etc, but the majority of operators don't
>need it.

And as much as being able to pull "the weak ones" out is a plus, ACCURACY is more important...That's why contests ding you if you miscopy an exchange. Those skills are collateral benefits to emergency communications...Lennie's uninformed opinion and ranting to the contrary.

>> Just face the reality of the matter. Morsemen got their little CW

If what Lennie is is being "pro", then I dare say we should take some
EXTRA pride in NOT being "pro" ! ! ! !

Len Anderson has absolutely ZERO experience in emergency communications,
save for what he cuts-and-pastes about CA's ACS system and MARS. No experience
as an Amateur operator, none in any capacity with any civil or federal program.
He is not a licensed Amateur, nor is he in any other program affilitated with
emergency communications, MARS included.

>I never thought I'd say that about myself, but unfortuntely it is true.
>I've tried to get my speed back up to something reasonable and expect

In regards to emergency uses, Geoffrey, it's irrelevent. It's nice to
have, especially for health and welfare trafficing, but otherwise not
necessary.

>People who work 9-5 5 days a week may actually be able to do it. I don't
>(more like noon (or eariler) to 3am).

Sure you can! Just one or two QSO's a day will get your speed up in no
time, regadless of when you work! I work 7P to 7A three to five days a week,
and I am able to KEEP my speed above 20WPM with little effort.

Len, what are "morsemen"?

And if you're talking about how the bands got carved up into Extra-only,
Advanced-and-Extra-only, and General-and-above subbands, that wasn't an ARRL
idea at all. It came from elsewhere.
>
> What is this "easy to enforce" nonsense?

It's not nonsense at all, Len.

What are you talking about, Len?

The only Morse-code-only segments of US amateur radio are the lowest 100 kHz of 6 and 2 meters. Open to all hams except Novices.

> You will be angry and disturbed at such direct language, but, like
> Ernestine's creator put it..."plbthththt...and that's the absolute
> truth." :-)

And it's as true as what Ernestine says. IOW, what you wrote is absolute nonsense, Len, and the historical records prove it.

Besides, why do you want to live in the past so much? Since 1990 it has been possible to get any class of US ham license with just a 5 wpm code test and a medical waiver. Since 2000, the only Morse code test left has been the 5 wpm test.

Here's a challenge for ya, Len:

Tell us, in brief and clear terms, without your usual level of insults, exactly what *you* think the US amateur license requirements and privileges should be. We already know you don't like the code test so that issue is clear.

But what about the rest? How many license classes? Subbands by mode, license class, power? What sort of written exams? Other requirements?

Let's see what *you* would enact if you could.

Or are you only interested in nonsense?

The trick is that it doesn't have to be one or the other. Just give
the new guy a job to do, and see how he does.

I suspect that many kids see a disparity between their education
(like Physics class, algebra class, and such) and the kind of
paying minimum wage jobs they can get (flipping burgers, stocking
supermarket shelves) and may conclude that school work doesn't
really apply to anything in the real working world. And see no
real reason to graduate other than a vague argument that school
is "good for you". I've told kids to stick it out, and that
you will get your payoff later on (in the form of better paying jobs).
And that stuff like English class is actually valuable (you need to
be able to write well so your boss understands what you are doing
so he thinks that you should get a raise and/or not get laid off).
The subject matter in English class may be stupid, but it's just
what the English teacher knows about (Shakespeare plays and such).
History class is not that important; I got thru life without
knowing about King Louie the VII. Get the C and be done with it.

What's to tell?

The Army still trains AD personnel from all services in Morse Code in
Arizona. This can be verified via independent sources so I will leave you to
it.

Of course Lennie willl jump in and tell us "IT"S FOR RECEIVE ONLY ! ! ! !"

Uh huh.

It's in the new nationwide JACO (Hospital Joint Accreditation
Committee) standards. That's how I got co-opted from the county
RACES/AREC program into the Providence St. Vincent Hospital (former
Catholic Charities Hospital) Disaster Communications Team although I
am neither Catholic nor Charitable.

We were lucky that we had two nurses who were hams before this
project started, and that the hospital administration has been very
generous in putting its hand into its pocket and coming up with
funds whenever we needed them. Five dual-band and two tri-band
VHF/UHF radios, three TNCs, two recycled laptop computers......we're
the packet node for the inter-hospital and RACES/AREC packet network
plus three voice circuits (two to the county and one regional
inter-hospital), plus SSTV which the administrators use to transfer
status diagrams between hospitals. We back up the regional and
local 800 MHz systems totally.

Our next quarterly exercise will involve relocation of the EOC (and
the radio equipment) from its primary position to a backup site
across the campus while the exercise is running. That ought to be
fun.

>the 'net.

Yep.
>
>Continued until I scored 100 percent pretty consistently.

And the actual test was a breeze, right?

What you did was to 'study the test'. Which isn't "wrong" or illegal, despite
what some may rant about it. You did what worked for you, within the rules.

>> Which do you *really* think requires more understanding of the mateiral and
>> the
>> concepts behind it - a test where you don't know the exact Q&A beforehand,

But someone cannot become a licensed electrician by written tests alone. There are extensive practical tests and experience requirements as well, and several levels of licensing. IIRC, here in PA it takes 9000 hours of documented work experience under the supervision of a licensed electrician to be licensed at the highest level.
>
>>>Rote memorization? Seriously if anyone rote memorizes the General and

>experienced this in my Extra test. And if the person knows the text of
>the answer, they almost certainly *know* the answer. That takes a level
>of understanding much greater than "This question's answer is "D"

Nobody with any sense memorizes the answer letters! But being able to know which answer is right after having seen the exact Q&A several times before doesn't guarantee any level of understanding.

For example, I could ask:

- Which of the following are blunatrons? (Flufnagles, zinthorps, calinars, rhenotors)

A) Fluffnagles and rhenotors only
B) Zinthorps only
C) Calinars and zinthorps only
D) Calinars, zinthorps and fluffnagles

(Of course the correct answer is C)

Now, if you remember that calinars and zinthorps are blunatrons but fluffnagles
and rhenotors aren't, you'll always get the question right. But do you really
understand anything about blunatrons?

They won't dare use that in the Bush campaign. Brother Neil has been involved in a messy divorce that, according to Bill Maher, includes infidelity of the prostitute type.

>
> Utter nonsense, Mama Dee. Spin-like rationalization.

Yep, that's absolute crap.

One license would be even easier to not enforce.

> AMATEUR radio is a hobby, not a national service, not an arm of the
> United States Navy or the rest of the military, and not a public safety
> organization. Just a hobby involving radio.

It can be a service, and many actually do dedicate themselves to that
service. They train and practice, take turns at being NCS, and
affiliate with county emergency offices and the American Red Cross.

But there is a large contingent that brags about copying an ARRL
message before field day starts, how they can send code so poorly that
a NCT with an electronic reader cannot copy, etc, etc, etc. Shining
examples of service.

> AMATEUR radio long ago CEASED to be a "pool of experienced morse
> operators" for any national need. The nation does NOT need morse
> operators, haven't for a long time.

But when the aliens arrive and don't know the code... they'll be in
for a rude awakening. We'll have 'em right where we want 'em!

I think it's just a legacy carry-over from a time when it was
necessary and useful. Those days are long past being necessary.

> >You see it in the home too. Kid asks, "Dad can I borrow the

Typical liberal slant. They assign the passes that the lib candidates
get to GWB. "Oh the humanity!"

Look, even GWB needs a job. So do you want him out in front of the
public where we can keep an evil eye on him, or do you want him behind
the closed door of an oil company boardroom dreaming up dastardly
deeds and raiding their retirement system?

Concerning a proposal for a morse code exam only for operation in the CW subbands:

"A Morse Code Exam will be a disincentive to CW use."

But no comment that it has been a disincentive for over 30 years.

And his little buddy says: "Sorry Hans, MARS >>>IS<<< Amateur Radio!"

Hi, hi. What au pair!

Yep, they're release a new training video from Barstow.

"How to Stencil Foot Lockers."

Featuring Dill Sargeant yelling orders at other clerk types.

> You know, moving all those olive drab boxes around while wearing
> spit-shined boots and sharply-creased fatigues.

You otta see him yell when a little stencil drift got on those boots.

Demerits! Push-ups!

> That little Barstow station is a far distance from a REAL combat
> training area, Fort Irwin, the Desert Warfare Center.

Now, now, now. You might injure his self-esteam.

> Barstow is HOT. Thermal, not action. He might have gotten
> sunstroke in addition to post-traumatic stress disorder.

Hot under the collar from all that yelling. Probably went into shock.
Still in shock just don't know when to quit.

Dialing, dialing, dialing, dialing, dialing, "Dust-Off, we need a
pick-up..."

> Meanwhile, Rev. Jim thinks all I do is "spam the FCC" with Comments,
> all of which are "wrong"

Pity that freedom to comment on something that the government has
asked for comments on is frowned upon by such influential,
right-thinking amateurs as Jimmy Who. Maybe his idol Kerry will
nationalize the amateur service and invoke mandatory service in the
AmeriRadioCorps.

and the Katapult King is in high society of
> the military.

Dumship doesn't know that everyone reports in.

Geez, all these OFs have nearly the same level of
> fantasyland that Fruitcake Fred, King of the Stalkers has!

It's systemic.

> Only Ryan is trying to stay on the thread subject of BPL. I'd like to
> also, but this newsgrope is filled with Hostile Action FIGHTERS! :-)

Ryan should be commended.

>INFORMED opinon on ANYthing having to do with Amateur Radio...???

Riiiiiiight, Stalker. How can ANYONE possibly know anything
about anything without being federally licensed in it?

Gosh, in your psychotic fantasyland, amateur radio must be a
classified, sensitive, deep dark secret, revealed only to those "eyes
only" folks who have been background-checked, right? :-)

NOBODY unlicense can possibly know anything at all!

So, therefore, howinnaheck is anyone going to find out about
supersecret classified hum raddio? :-)

Poor baby Stalker. Still off on that delusional psychosis of
hate-hate-hate suffered from grievous woundings in old newsgrope
messaging! [he needs a purple heart or something for that shoe
box of medals]

>>> The separate, elite morsemen-only portions of the ham bands were
>>> put there by old morsemen who were able to influence League
>>> lobbying.
>>
>>Len, what are "morsemen"?
>
> Anything and everything he's not.

I'm a retired electronics engineer with a good retirement income.

That means a professional. Sunnuvagun!

Stalker Stevie a pro? Stalker have a pro kit?

Stalker do good yell-yell-murine imitation. Did "seven hostile
actions." Never explained that. Might have been done in hum
raddio "actions?"

Stalker did "combat trianing" in Barstow, CA, murine warehouse
and supply depot? Tough duty. Very hostile. Action?

> Reminds me of the TV evangilist who was always hollering about the
>immorality of the flesh, then got caught renting it!

Stalker Stevie get in trouble again with religion? Tsk.

> The propaganda is coming from the Loser on Lanark.

Poor delusional, hate-filled psychotic now wants to go geographic.

Tsk.

10048 Lanark Street, Sun Valley, CA. Nice neighborhood.
Upscale. Mortgage got paid off fully years ago. Adjoining
walled community of 44 homes, one going for $860,000.

Look it up on MapQuest.

Know how? [no license required to use MapQuest...]

> I don't think Lennie's diagnosis of ACRI (*) counts for Amateur testing
>waiver purposes, Jim.

Poor delusional, hate-filled psychotic snitting in public again.

Poor Stalker needs mental therapy.

Medical science may not be up to his level of psychosis.
Too much hate, too thin a skin for sustained newsgrope
living. Tsk.

But, it's okay for all extras to say or do anything, to be the role-
model evangelists for Olde Tyme Hamme Raddio...the one where
Kode was King and strictly enforced by Mighty Macho Morsemen.

> My bet's on the nonsense. That's all he's produced here.

Sorry, can't venture into your psychotic fantasyland. Too weird
in there. It isn't reality. It is the Twilight Zone pesonified.

Try a different mix of pilfered drugs from the "ER" medicine room
next time.

>Steve, K4YZ
>
>(*) Acute Cranial Rectal Inversion

Tsk, tsk, tsk. The same snit from one who DEMANDS genteel,
civil behavior, no nasty words.

A good example of top-of-the-line Amateur Extra behavior?

Fort Huachuca, Arizona. "Home of the Buffalo Soldiers."

U.S. Army Military Intelligence Center, School, and also the Hq
for Army MARS. :-)

Huachuca has a nice website which includes an on-line "museum"
of important Military Intelligence folks.

> Of course Lennie willl jump in and tell us "IT"S FOR RECEIVE ONLY ! ! !
>!"
>
> Uh huh.

Absolutely for RECEIVE ONLY! :-)

Passive signal intelligence work is done that way. The other side has
no idea they are being intercepted. Sunnuvagun! How about that?

The curricula for all MOSs was on-line at Fort Huachuca. Haven't
been there lately (on-line) so it might have been re-arranged. They
had the names of the computer programs used in teaching morse
code. All were commercial packages. Sunnuvagun! How about
that!

Been to Fort Huachuca in person. Hotness rules. Stalker Stevie
will say "he's been there too" if his paranoic psychosis is working
the same. :-)

Now, now Rev. Jim. You're off on an evangelical Sermon on the
Antenna Mount again!

You just didn't answer the question I posed about "enforcement
ease." Tsk. tsk. tsk.

Tell us how morse signals are "easier to enforce" than voice
signals. Try a few details of how that is done.

>> The separate, elite morsemen-only portions of the ham bands were
>> put there by old morsemen who were able to influence League
>> lobbying.
>

>Len, what are "morsemen"?

An elite band of beepers stuck in a time warp of yesteryear.

Amateurs, of course.

The rest of the radio world has given up morse code modes for any
primary communications. Most other radio services never even
considered it!

>And if you're talking about how the bands got carved up into Extra-only,
>Advanced-and-Extra-only, and General-and-above subbands, that wasn't an ARRL
>idea at all. It came from elsewhere.
>>

So...answer how it is "easy."

>> The FCC reads morse
>> easier than it can voice? [I don't think so] Can the FCC DF on
>> OOK-CW signals "easier" than voice signals? [I don't think so]
>>
>The easy to enforce *fact* is that it's simple to check the frequency of a
>signal against the license class. It's not nearly so easy to verify things
>like power level.

Oh, yeah, the Magick of Morse!

All morsemen are superbly honest and without fault...would not
dream of falsifying anything, would they?

Hello? Ever hear of audio recorders? Those have been around
since WW2. Really. More modern stuff than wire recorders
nowadays, old timer. Combine that with modern DF techniques
(no rotating loop antennas required) and modern data recorders
and ANY signal can be found out.

>> All of the morsemen's propaganda is just spin to keep their little
>> morse playground. No more, no less.
>
>What are you talking about, Len?

YOUR spin on morse code. And the Belief System of the Church
of St. Hiram.

>The only Morse-code-only segments of US amateur radio are the lowest 100 kHz
>of 6 and 2 meters. Open to all hams except Novices.

WE weren't talking about "morse code only" stuff, Rev. Jim.

[got some bad peyote again? tsk]

>> You will be angry and disturbed at such direct language, but, like
>> Ernestine's creator put it..."plbthththt...and that's the absolute
>> truth." :-)
>
>And it's as true as what Ernestine says. IOW, what you wrote is absolute
>nonsense, Len, and the historical records prove it.

Yah, yu be all hot and bothered! :-)

SPIN doctoring you do, Rev. Jim, and you don't have the license
to practice doctoring. Tsk, tsk.

>Besides, why do you want to live in the past so much?

Moi? HAH!

Who was talking up "T.O.M." olde tymer? YOU were.

EIGHTY YEARS AGO.

Tsk, tsk, tsk.

>Since 1990 it has been
>possible to get any class of US ham license with just a 5 wpm code test and a
>medical waiver. Since 2000, the only Morse code test left has been the 5 wpm
>test.

So?

The morse code test is STILL THERE, isn't it?

All U.S. amateur radio licenses with below-30-MHz privileges
require passing that morse code test. NOW. Not 14 years ago,
not 80 years ago. NOW.

WHY?

>Here's a challenge for ya, Len:

Lissen up, peyote breath. Here's YOUR challenge:

Try to go a whole 48 hours of NOT accessing the newsgroup and
telling everyone a sermon or preaching that Code Is Good, the Best.

Bet you can't do it. :-)

You can't. You are fixated on Being Here, the Voice of "Truth"
about olde-tyme hamme raddio, telling all heretics to your
Belief System that they are "wrong," "incorrect," and other
indelicate nasties when they don't like Mighty Macho Morse.

Ho hum.

>opportunity.

Poor Stalker, still deep in delusional psychosis thinking that all who disagree with Him are "discrediting amateur radio" (not "amatueur" radio, hi hi).

No other radio service in the USA uses morse code for ANY emergency communications, nor do they do that for primary radio communications purposes. No Public Safety Radio group needs any morse qualifications to do their work.

> Additionally he was in error that stating that "Amateur radio long ago
>ceased to be a "pool of experienced morse operators" for any national need."

No "error." REALITY.

Stevie Stalker LIES again, but doesn't understand he does. Tsk.

He confuses his fantasy with reality. Bad scene. He need mental help.

> Indeed Amateur Radio is the ONLY pool of Morse capable radio operators
>remaining, the very small contingent of military and SIGINT operators not
>withstanding.

VERY small. The Military Intelligence Center at Fort Huachuca
trains signal intercept operators. A few of the MOSs in that school
learn International Morse Code from computer programs. Those same
trainees also learn to operate a variety of recorders to record those
intercepts for later analysis. Just one small facet of MI training.

On-off keying morse code is falling in the rest of the world. Eventually
even they (the U.S. military) will drop that training. They have the
recorders and the recorded intercepts if some idiot foreign force wants
to use morse...and thus be open to signals attack by just about
anyone.

> And as much as being able to pull "the weak ones" out is a plus, ACCURACY
>is more important...That's why contests ding you if you miscopy an exchange.
>Those skills are collateral benefits to emergency communications...Lennie's
>uninformed opinion and ranting to the contrary.

Poor delusional Stalker, still mixing up his hate-filled dystemper of a
fantasyland continuum with reality. Tsk. He needs mental help.

> If what Lennie is is being "pro", then I dare say we should take some
>EXTRA pride in NOT being "pro" ! ! ! !

More delusional Stalker fantasyland hate.

There are NO Public Safety Radio Services now using morse code
in any form for public safety communications. None.

> Len Anderson has absolutely ZERO experience in emergency communications,
>save for what he cuts-and-pastes about CA's ACS system and MARS.

Untrue, but trying to convince a delusional psychotic with a gigantic
hate complex living in his fantasyland is a non-starter.

Poor Stalker needs mental therapy.

>No experience
>as an Amateur operator, none in any capacity with any civil or federal
program.

Untrue. But Stalker will insist that I have none until the last psychotic
delusion is ripped from his hate-filled little mind...

>He is not a licensed Amateur, nor is he in any other program affilitated with
>emergency communications, MARS included.

"Sorry, Hans, MARS >>IS<< amateur radio!" Hi hi ho ho.

Department of Defense Directive 4650.2, effective November 2003
says otherwise.

Amateur licensee Stalker says MARS is amateur radio.

Just who is the LIE spreader there?

Hint. It isn't DoD. :-)

>Excellent. We can apply that similar logic to amateur radio requirements.
>The spectrum is a public resource. The prospective ham needs to demonstrate
>that he has the potential to be a contributor.

Morsemanship left the "public resource" zone a long time ago for
all the other radio services.

You, and all other morsepersons, seem to think that amateur radio
is all concerned with morse code skills. That's hardly in any "public
interest" except to that tiny slice of the "public" that worships at
the Church of St. Hiram.

You and all the other morsepersons are Believers in that "church."

>This is accomplished by the
>testing process. The connection is then similar: demonstrating the
>potential for responsibility and being part of a larger group.

Becoming a part of a slightly larger group of morse code users.

ONLY in amateur radio.

Hundreds of thousands of others have "demonstrated their
'potential' for responsibility...and DEMONSTRATED that very
responsibility" in the military and/or commercial radio...WITHOUT
having to do that testing for morse code cognition.

As one of that group, I don't feel chastened by those spankaroony
words from a self-styled "parent" who was into such responsibility
beginning a half century ago.

>Notice that
>I tag it as potential since there will always be a few who are willing to
>put in the effort but then end up being problems.

Notice: Mama Dee wants to play "parent" again, thinking that all
others not thinking as she does are "children." Tsk, tsk.

Poor Dee. Still on that self-elevated elitist pedestal again, trying
to spank others for not thinking properly. :-)

>privileges.

Hardly. Just a nice little CLUB rule set devised by those wonderful morsemen of olde tyme hamme raddio (when men were "men" and kode was king). Yawn.

At three years into the new millennium, a time when all the other U.S. radio services have dropped morse code for any sort of communications, the olde tyme hammes insist on Kode is King.

That's the divine religious order dictum from the Church of St. Hiram.

FCC got talked into keeping it by all those morsemen who elevated themselves (by their bootstrap circuits?) as grande champion radio ops and using morse to "get through when nothing else would" (incorrect, but one can't convince a Believer in real truth).

You can gloss up the "federal" rules any way you want as "so very important" but that whole rule set is going by inertia and FCC isn't all that interested in bothering with a bunch of amateur hobbyists to change the rules. Lots more REAL radio for FCC to regulate.

Have fun pretending you are necessary for Homeland Security, defending the nation by morsemanship. :-)

>Porky Pig is a ham. He on the list?

Also, some of the people on the list may not be hams. Don't assume that they
all are. Just because they have a call sign does not mean they are "hams",
either. One can still like radio (amateur or professional), and not be a "ham".

NOT in HERE! No, sir! In HERE, Hams are the elite of all radio ops, and the Extra Morsemen are the top of that food chain.

Mighty Macho Morsemen can't take humor. Wasn't on their test.

All must bow down to Mighty Morsemen, honor them with respect and dignity...then take all the snit they can possibly think up in return. Morseodist Double Standard in full flower!

We all have the supreme freedom of free speech...provided we get authorization from morsemen to say it in here.

You have been warned!

Not a lie, Lennie...A bet.

> Poor boy just doesn't know when to quit with that terrible hate
> psychosis. Can't realize that his fantastic thoughts just aren't
> liked by others. That's how it is with the mentally disturbed...

There's no "hate psychosis" here.

(A bit of impatience wating on your credentials in mental health
disciplines, however...you continue to make "diagnosis" without a license to
practice medicine OR psychiatry...)

> No problem here on walking or leg useage, working fine. No
> "lameness." However, poor Stalker must have stepped in
> something long ago...probably his first set of LIES in here.

You have the ultimate lameness, Lennie.

You have a hole the size of Lake Erie in your character. That's
documented. If you put as much time into fixing it as you did night school,
you might actaully be a man someday.

> No need to hide identities here. I'm still at the same address
> as given in those Ham Radio magazine articles. You can also
> send e-mail to the following very valid e-address:

I have no doubt you're at the same address.

I am sure your IEEE address is valid.

I am also sure that a number of "anonymous" posts that pop in here from time to time are your doing, and that it is merely your "force multiplier". You cannot garner any real "support" from people willing to put thier real names to thier posts, so you make them up.

(Of course there's Vipul Shah, whose identity had to be drawn out, and there's Brian Burke, whose own "honesty" and current use of a nomme-de-guerre induces it's own confusion...these guys are who you want "rooting" for you...?!?!)

I'd expect nothing less from you. You've set your own standard, as low as it is. Please don't whine and snivvel when it's fed back to you, Lennie. You're a victim of your own misconduct.

Steve, K4YZ

>
> So...answer how it is "easy."

I'll explain it again.

If a ham tries to exceed license privileges by operating on frequencies not
licensed to that ham, all that has to be done is measure the operating
frequency and identify the source.
>
>>> The FCC reads morse
>>> easier than it can voice? [I don't think so] Can the FCC DF on

> The morse code test is STILL THERE, isn't it?

Sure. Even though the treaty changed over a year ago, and there have been a
half-dozen or more petitions asking to drop the code test, FCC hasn't changed
anything about it.

Why don't you confront Chairman Powell on his blog and ask him why not? Maybe
you could call him "Mikey" and tell him how unqualified he is. You could use
the same sort of style there as you use here, Len.
>
> All U.S. amateur radio licenses with below-30-MHz privileges

You did take editorial liberty with the post to add your anti-Amateur
spin, Lennie.

> No other radio service in the USA uses morse code for ANY
> emergency communications, nor do they do that for primary
> radio communications purposes. No Public Safety Radio group
> needs any morse qualifications to do their work.

This is NOT any other radio group, Lennie.

It's not the Armed Forces.

It's not PLMRS.

It is not SINCGARS or 1950's Army message centers.

>> Additionally he was in error that stating that "Amateur radio long ago
>>ceased to be a "pool of experienced morse operators" for any national need."
>
> No "error." REALITY.

And conce again we have a non-licensed...in this case mental healtcare provider...rendering yet another unqualified opinion.

No fantasy.

Amateur Radio remains the most significant "pool" of "trained operators" in the United States, save for the Armed Forces. That includes Morse Code trained persons.

>> Indeed Amateur Radio is the ONLY pool of Morse capable radio operators
>>remaining, the very small contingent of military and SIGINT operators not
>>withstanding.
>
> VERY small. The Military Intelligence Center at Fort Huachuca
> trains signal intercept operators. A few of the MOSs in that school

Morse Code will continue for some time to be a necessary skill.

Thankfully some in the Armed Forces have been able to recognize that while we've buried ourselves under burdonsome technology, some of our adversaries have quietly gone about keeping things in the KISS mode...And THEY have done thier best to make sure we can have at least some reserve pool of AD personnel who can be called upon to intercept it.

> On-off keying morse code is falling in the rest of the world. Eventually
> even they (the U.S. military) will drop that training. They have the
> recorders and the recorded intercepts if some idiot foreign force wants
> to use morse...and thus be open to signals attack by just about
> anyone.

Open to attack by just about anyone?

It's not the manual OOK that is important, Lennie...It's the message being sent. The Germans used OOK from thier subs, and until we came into possession of an Enigma machine and the requisite code books, their transmissions were just as "secret" as they woul;d have been using any other mode today.

AJKKL CDPMQ GCMMN ADAZP DDSZX WTUPA ZPZQY

Now...if I transmit those code groups via manual Morse, PSK, encrypted
vocie satellite, etc, of what use are they without the code book?

And if I can send those code groups to my "agents" with a transmitter
hacked together with $50 worth of parts rather than a $3000 manpack that
requires an orbiting asset to realy it,

>> And as much as being able to pull "the weak ones" out is a plus,

Not untrue.

By your own admission (unless you were lying about that too) you are not
involved in any emergency communications program except as an observer.

From your posts here it is pretty clear you that you are indeed NOT
involved in any program at any level.

>>No experience
>>as an Amateur operator, none in any capacity with any civil or federal

It's been here all along, Lennie.

But while you've been so anxious to take each and every opportunity to
naysay anything anyone has said that even remotely favors Amateur Radio, you
haven't been paying attention to what's being said.

There's a psychotic in this forum, Lennie...But it's not me.

>>>People who work 9-5 5 days a week may actually be able to do it. I don't
>>>(more like noon (or eariler) to 3am).

> classified, sensitive, deep dark secret, revealed only to those "eyes
> only" folks who have been background-checked, right?
>
> NOBODY unlicense can possibly know anything at all!

Sure they can...if they ahve some sort of practical experience in it...

You are neither licensed OR experienced. Not in AMATEUR RADIO.

>>>Len, what are "morsemen"?
>>
>> Anything and everything he's not.

>
> I'm a retired electronics engineer with a good retirement income.

You are an ALLEGED electronics engineer.

Some in a position to know your "professional" services directly quantify
your skills as "mediocre, at best..."

> That means a professional. Sunnuvagun!

Sure...In the strictest dictionary definition of it.

I measure "professionalism" by the opinions of one's peers.

You collected a wage. Invested it wisely. Good for you.

But you did NOTHING to contibute to "radio".

> Stalker Stevie a pro? Stalker have a pro kit?

Adjoining...But not IN...

I am sure it is yet one more example of you being on the outside looking
in as I am sure you have spent your whole life being "just this side" of where
you THINK you belong.

I am sure you belong IN a "walled community", but I am sure not the one
you think you belong in.

And as for that $860K, it gets you a subdivision-sized lot in an HOA
controlled enviroment. It gets you a chance to pay taxes in one of the highest
taxed states of the Union, along with the highest crime per-capita and

> Look it up on MapQuest.
>
> Know how? [no license required to use MapQuest...]

Do some looking of your own...But use Coldwell Banker or Century21...See
what that same money will get you outside of Kalifornication.

>> My bet's on the nonsense. That's all he's produced here.
>
> Sorry, can't venture into your psychotic fantasyland. Too weird
> in there. It isn't reality. It is the Twilight Zone pesonified.

You've already BEEN in a "psychotic fantasyland".

It's called your mind, Lennie.

You can't/won't tell the truth and don't live up to your own rhetoric.
For YEARS now.

> Try a different mix of pilfered drugs from the "ER" medicine room
> next time.

And now accusations of theft in order to make yor position even more
untenable than it was.

Ahhhh, Lennie...What would your $860K gated community neighbors think of
you if they could see all of your online misdeeds and misrepresentations...?!?!

Under the right conditions, yes.

> If I were to

I disagree!

The greatest sustained period of growth in US amateur history was from the end of WW2 until the mid-to-late 1980s. From 60,000 hams on VJ day to about 600,000 40 or so years later. And this included a period of almost no growth in the mid 1960s. Through most of that time, the training ground for new US amateurs was predominantly HF.

That's a good description of what you post here, Len ;-) ;-) ;-)
>
> AMATEUR radio is a hobby, not a national service, not an arm of the
> United States Navy or the rest of the military, and not a public safety
> organization. Just a hobby involving radio.

It's not "just a hobby".

But even if it were, what's the difference? If something is "just a hobby",
does that mean there should be no standards, no training, no rules?
>
> AMATEUR radio long ago CEASED to be a "pool of experienced morse
> operators" for any national need.

When did it cease, Len?

And here's a fun fact: The Basis and Purpose never used the phrase "experienced morse operators". Just "experienced operators" - no mention of modes.

> The nation does NOT need morse operators, haven't for a long time.

How long?
>
>>Most rewards in the real world have little relationship to the work
>>requested.
>
> More spin crappola.

Well, at least you're honest about your content ;-) ;-) ;-) ;-)

> "importance of a pool of trained operators" and the FCC caved in
> to their demands.

When was this? And in what alternate universe?

The "pool of trained operators" thing came from FCC, not ARRL.

His clerk buddies probably gave him seven blanket parties for being such a whacko. That and his stenciling was crooked.

>> AMATEUR radio is a hobby, not a national service, not an arm of the
>> United States Navy or the rest of the military, and not a public safety
>> organization. Just a hobby involving radio.
>
>It's not "just a hobby".

Unfortuantely for Lennie the FACTS are that Amateur Radio DOES provide a
service to the nation, that service does, incidentally, benefit the Armed
Forces, and is an ever-increasing presence in public service plans at all
levels, local to federal.

>But even if it were, what's the difference? If something is "just a hobby",
>does that mean there should be no standards, no training, no rules?

Only if you're a night-school trained ex radio technician on a mission to
berate anyone else who even hints at an interest in radio you deem inferior to
your own.

>> AMATEUR radio long ago CEASED to be a "pool of experienced morse
>> operators" for any national need.
>
>When did it cease, Len?

There's a dozen of us in this forum alone who hold current licensure and
who are proficient in Morse Code.

Seems like it "ain't over yet" to me...

>And here's a fun fact: The Basis and Purpose never used the phrase
>"experienced
>morse operators". Just "experienced operators" - no mention of modes.

That's a LennieRant issue, Jim. Even when the current context DOESN'T
include Morse Code, he'll interject it and then claim we (licensees) are the
ones obsessed with it.

>> The nation does NOT need morse operators, haven't for a long time.
>
>How long?

And who said?

Was there a Presidential Executive Order? Did Congress ammend the
Constitution? Did the FCC and NTIA prohibit the use of Morse Code for thier
respective services?

>>>Most rewards in the real world have little relationship to the work
>>>requested.
>>
>> More spin crappola.
>
>Well, at least you're honest about your content ;-) ;-) ;-) ;-)

I get the feeling there's a LOT of crappola in the Anderson residence.

>> The influential morsemen at the League
>> managed to carve out a separate little morse playground for
>> themselves with all sorts of fatuous phrases of "national need" and
>> "importance of a pool of trained operators" and the FCC caved in
>> to their demands.
>
>When was this? And in what alternate universe?

"Morse playground"...?!?!

There's only two slices of Morse-only spectrum, both are in the VHF range,
and were lobbied for by weak signal operators anxious to see a part of the
spectrum protected for thier work...Mostly EME and meteor scatter techniques,
but the sues are growing.

>The "pool of trained operators" thing came from FCC, not ARRL.

>>>You see it in the home too. Kid asks, "Dad can I borrow the
>>>car?" Parent replies, "After you mow the front & back lawn and run the
>>>edger." There is absolutely no relationship between the two activities.

>>>care to do but does it anyway to get the reward.
>>
>> So, the League is a surrogate parent?!? I don't think so.
>
>How many kids have you raised, Len?

Including himself?

>> Are all the Amateur Extras surrogate parents now? I don't think so.
>
>You aren't.

But that's what he perceives himself as...

>> Dee, quit this infernal nattering about "parentage" and ham radio.
>
>Why, Len? Because it's really quite an accurate analogy?

It makes Lennie nervous.

He shot blanks all his life, and now any discussion of kids get's him
wound up. That's why he wanted to exert some "parental control" over younger
licensees with that age limit crap.

>> Quit trying to sound off like you've got an influential pair.
>
>Pair of what, Len?

What ever they are, I bet Lennie doesn't have a pair of them...Maybe a
pair of slippers or glasses...Nothing else.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of July 15, 2004:

Novice - 30,891 (decrease of 18,438)
Technician - 262,355 (increase of 56,961)
Technician Plus - 58,172 (decrease of 70,688)
General - 139,354 (increase of 26,677)
Advanced - 79,368 (decrease of 20,414)
Extra - 105,840 (increase of 27,090)

Total Tech/TechPlus - 320,527 (decrease of 13,727)

Total all classes - 675,620 (increase of 828)

Poor delusional Gunnery Nurse must be hurting in another area.
Thinks ham radio is either all about sex or has nothing to do
with sex. :-)

Ah, yes, the Gunnery Nurse put on his Class A Amateur uniform
and is busy doing recruiting for The Service! Spreading all that
"good will" the FCC says hams have?

Hollywood could make another movie about good will hunting.
Starring the Staring Stalking Dill Instructor busy chewing out
all those not delighted with his Yell-Yell. :-)

An eighth hostile action to put in with his shoebox medal set!

>respective services?

Poor nursie still living in his fantasy world. Tsk, tsk.

He doesn't get out beyond checking out "paid services," I guess.

Even maritime radio has gone over to SSB voice and data modes for
open-ocean communications. That and satellite relay.

NO other radio service besides amateur radio uses any morse code
modes for communications.

>>>>Most rewards in the real world have little relationship to the work

>
>That's a good description of what you post here, Len ;-) ;-) ;-)

Only to the PCTA.

The PCTA live for such spin. They try to literally live it.

>> AMATEUR radio is a hobby, not a national service, not an arm of the
>> United States Navy or the rest of the military, and not a public safety
>> organization. Just a hobby involving radio.
>

>It's not "just a hobby".

For some it IS a lifestyle. Their problem, not the governments.

So, amateur radio is NOT a hobby?

Prove its vital need to the nation as a national service or an arm of
the military or a public safety organization.

The FCC hasn't proved that. Only the ham-lifestylers try to prove
that. They NEED the rationalization.

>But even if it were, what's the difference? If something is "just a hobby",
>does that mean there should be no standards, no training, no rules?

Tsk, tsk. Arguing to extemes again?

The FCC isn't chartered to do "training" for radio hams.

The FCC doesn't really "set standards," only sets regulations.

>> AMATEUR radio long ago CEASED to be a "pool of experienced morse
>> operators" for any national need.
>
>When did it cease, Len?

Long ago. :-)

Find all the military morsemen "needs" you can. That be easy, as
there are no such needs.

Find all the commercial communications services you can, count
the "needs" for morsemen. Very few and those be on the Great
Lakes shipping.

>And here's a fun fact: The Basis and Purpose never used the phrase
>"experienced
>morse operators". Just "experienced operators" - no mention of modes.
>
>> The nation does NOT need morse operators, haven't for a long time.

>How long?

Long time. :-)

>>>Most rewards in the real world have little relationship to the work
>>>requested.
>>
>> More spin crappola.
>
>Well, at least you're honest about your content ;-) ;-) ;-) ;-)

Tsk, tsk. Not nice. Rather nasty comment for a portentious
revered one of the Great Gurus of the newsgrope.

>> The influential morsemen at the League
>> managed to carve out a separate little morse playground for
>> themselves with all sorts of fatuous phrases of "national need" and
>> "importance of a pool of trained operators" and the FCC caved in
>> to their demands.
>
>When was this? And in what alternate universe?

In the present universe.

Those who are busy spinning can't believe it.

>The "pool of trained operators" thing came from FCC, not ARRL.

No kidding? I thought you thought the ARRL regulated all
things in ham radio.

Learn somethin' every day! Sunnuvagun!

>>>You see it in the home too. Kid asks, "Dad can I borrow the
>>>car?" Parent replies, "After you mow the front & back lawn and run the
>>>edger." There is absolutely no relationship between the two activities.
>>>The kid gets a highly desired reward for work that he/she probably doesn't
>>>care to do but does it anyway to get the reward.
>>
>> So, the League is a surrogate parent?!? I don't think so.
>
>How many kids have you raised, Len?

On July 4th, two of them. :-)

What? Everyone applying for a ham license nowadays have to
bring a medical certificate for a sperm count?!?

Do they have to show birth certificates of their offspring too?

My word, the rules have really become tuff!

>> Are all the Amateur Extras surrogate parents now? I don't think so.
>
>You aren't.

Haven't pretended to be, Rev. Jim.

You ARE going to misdirect into some "parenting" argument, aren't
you? [your sort of newsgrope tactic]

>> Dee, quit this infernal nattering about "parentage" and ham radio.
>
>Why, Len? Because it's really quite an accurate analogy?

Who said it is "accurate?"

You ham lifestylers really get too, too deep into it.

>> Quit trying to sound off like you've got an influential pair.

>>
>> NOBODY unlicense can possibly know anything at all!
>
> Sure they can...if they ahve some sort of practical experience in it...

Illogical. To have "practical experience" in amateur radio
REQUIRES an amateur license. Those without that magick license
"cannot have any practical experience in it." [Stalker stated that]

Bottom line is that Stalker doesn't know what the hell he is talking
about.

U.S. amateur radio is open for observation to anyone...on the air,
in print, in person to the public.

Stalker is trying vainly to prove that those without licenses cannot
know anything at all about radio. That's absolutely false, a LIE of
bright magnitude, but he can't stop. Tsk.

> You are neither licensed OR experienced. Not in AMATEUR RADIO.
>
>>>>Len, what are "morsemen"?
>>>
>>> Anything and everything he's not.
>>
>> I'm a retired electronics engineer with a good retirement income.

Sigh. Poor nursie can't help herself with all the insults. :-)

Riiiiiight...I have alleged resumes, alleged history in the alleged
industry, an alleged patent, alleged schooling with alleged skin from
an alleged sheep, know alleged hams who have alleged ham licenses
longer than nursie has allegedly lived. Not only that, the alleged IRS
and alleged tax board and alleged government agencies all allegedly
believe I allegedly did all that. The alleged bank keeps track of all
the alleged income I allegedly made, taking in the alleged social
security check allegely electornically.

Not only that, I was once a long-time member of Joe Sheppard's
The Ledge BBS!

> Some in a position to know your "professional" services directly quantify
>your skills as "mediocre, at best..."

A LIE, nursie. Bald-faced, out and out LIE.

You don't know squat about the electronics industry or military
electronics or civilian electronics other than reading about ham
radio in QST. YOU DON'T KNOW.

Now YOU produce those NAMES of the "some" you ALLEGE
"know."

You can't because they DON'T EXIST. They are a fermentation of
your hate-filled obsessional, delusional psychosis in here.

Get some mental therapy. From a real shrink.

It will help everyone, even yourself.

Pbthththththth.

>have quietly gone about keeping things in the KISS mode...And THEY have done
>thier best to make sure we can have at least some reserve pool of AD personnel
>who can be called upon to intercept it.

More imaginary bullshit.

Again, you don't name names and talk only in generalities. That's because
you have NO experience in military electronics R&D or contracts
administration nor in planning...not in the labs, not in the field, not even
in the history of military radio.

Huachuca trains intercept operators on whatever is needed. Computer
programs for teaching morse code cognition don't depend on human
morsemen to "teach" anything.

>> On-off keying morse code is falling in the rest of the world. Eventually
>> even they (the U.S. military) will drop that training. They have the
>> recorders and the recorded intercepts if some idiot foreign force wants
>> to use morse...and thus be open to signals attack by just about
>> anyone.
>
> Open to attack by just about anyone?

The term "attack" in cryptography means to begin decipherment or
the act of decipherment. Word has been around a long time.

> It's not the manual OOK that is important, Lennie...It's the message
being
>sent. The Germans used OOK from thier subs, and until we came into possession
>of an Enigma machine and the requisite code books, their transmissions were
>just as "secret" as they woul;d have been using any other mode today.

More bullshit from the very UNqualified "military communications" non-
guru. Quit cutting and pasting from old WW2 stories.

The Brits broke Enigma early in WW2. NOBODY broke the U.S.
rotor system implemented in the "Sigaba" teleprinters.

NOBODY worthwhile is using "code books" in this day and age.
At best, they might use "one-time pads." Nobody HAS to. The
encryption-decryption can be done in firmware, in a microcontroller.
It's done daily in millions of cell phones.

"Burdensome technology?!?" For a single IC stuck on a PC board?
Produces and deciphers to a very long key and is essentially very
hard to break.

128-bit encryption-decryption is regularly done in Internet browser
software. For all intents and purposes it is as secure as needs be.

On-line cryptography is NOT "burdensome" today. It occurs millions
of times a day around the world. Only the severe paranoiacs go
berserk at the thought of it. It is secure enough for its purpose.

> AJKKL CDPMQ GCMMN ADAZP DDSZX WTUPA ZPZQY
>
> Now...if I transmit those code groups via manual Morse, PSK, encrypted
>vocie satellite, etc, of what use are they without the code book?

"Vocie?" [a new mode? :-)]

Of what use is that "code book?" About the LAST time the U.S.
military used "code books" was in North Africa around 1942-1943.
A State Department code book, used by an Army major who knew
military tactics but nothing about cryptography. German field
cryptologists routinely broke his reports. He never knew.

> And if I can send those code groups to my "agents" with a transmitter
>hacked together with $50 worth of parts rather than a $3000 manpack that
>requires an orbiting asset to realy it,

Riiiiight...you've been reading too many morse romance novels again,
haven't you? :-)

Riiiiiight...."hacking together" a super-secret raddio for HF that uses
"unbreakable" morse code. :-) For only $50 worth of parts. Right.

In your dreams, delusional one.

All that kind of nonsense ended with WW2.

No wonder you never got any real military commo experience.
Not even when you learned to stencil those boxes correctly.

> By your own admission (unless you were lying about that too) you are not
>involved in any emergency communications program except as an observer.

Incorrect. Try 1994. January.

> From your posts here it is pretty clear you that you are indeed NOT
>involved in any program at any level.

Right. All our phones here have 911 capability. :-)

What is the Stalker going to do? "Airborne his CAP asset" and relay
super-secret HF morse from his "agents?!?"

> But while you've been so anxious to take each and every opportunity to
>naysay anything anyone has said that even remotely favors Amateur Radio, you
>haven't been paying attention to what's being said.
>
> There's a psychotic in this forum, Lennie...But it's not me.

Crazy folks won't admit they are crazy. :-)

Basic rule found in any undergraduate psychology course.

>
> Sucks to be you, Putz.

Tsk. The Stalker put away is Amateur Corps Class A uniform and the recruiting posters for the United States Amateur Corps ("A few good men...") and lapsed into his hate-filled snarliness mode.

Well, Stalker IS a representative of top-of-the-line amateur radio licensee.

All the PCTA love him. He be Tuff and Loud. Yell-Yell alla time.

> It's not "just a hobby".

It is for most of the participants.

> But even if it were, what's the difference? If something is "just a hobby",
> does that mean there should be no standards, no training, no rules?

The FCC does not mandate training, does not mandate operating. It
simply has a mechanism in place for VEC's to examine applicants, for
the issuance and renewal of licenses, publication of regulations, and
rarely issues a citation.

The FCC does not run contests, sprints, DXCC, field days, or nets.

> > AMATEUR radio long ago CEASED to be a "pool of experienced morse
> > operators" for any national need.
>
> When did it cease, Len?

"long ago"

> And here's a fun fact: The Basis and Purpose never used the phrase "experienced
> morse operators". Just "experienced operators" - no mention of modes.

So the Basis and Purpose never emphasized (favored) one mode over
another.

Wonder where that come from?

> > The nation does NOT need morse operators, haven't for a long time.
>
> How long?

"a long time"

Jim, did you realize that a code exam is a disincentive to CW use?

Somebody tell me if I missed something here? The Anon poster asserts
that Mr Davies flunked out of high school. Immediately following, the
same Anon poster then asserts that Mr Davies flunked out of college.
Any legitimate college I know of does not accept someone who has not
earned a high school diploma. Additionally, the Anon poster would like
us to believe by insinuation that delivering pizza is a less than honorable
occupation. Excuse me, but pizza delivery can be quite a lucrative
occupation, as many a moonlighting delivery man can tell you. Pizza
delivery is also a stepping stone to management in the pizza business.
Delivering pizza also means the person holding said job is not on
welfare, and that same person is paying taxes. Sounds to me like a very
productive citizen, unlike those who collect welfare or SSI. Therefore,
it is my opinion that if Mr Davies is in fact a pizza delivery person, as
the
Anon poster asserts, then Mr Davies is to be commended for being a
responsible and productive American. In fact, it would not surprise me
if Mr Davies is carefully investing his earnings toward the future when
he will manage and own a chain of pizza stores across America.
Entrepreneurs, such as Mr Davies, are the backbone of the American
economy. We are proud to number Mr Davies as one of our productive
fellow Americans! Carry on Mr Davies, we are proud of you and look
forward to seeing your pizza chain listed on the American Stock Exchange
in the near future.

Al Hanson
President & CEO of Hanson Industries, LTD.

A lot of the music out there is noise. Indeed, depending on the definition used, it could all be noise.

HAHAHAHAHAHAHAHAHA!!!!!!!!!!! Yeah, right. "Lucrative?" "stepping stone?"
A kid's job. The kind of job that white people should reserve for kids
that need weekend money,
or for someone to supplement their "real" job's income for a few weeks
or so. How long has *your*
underachieving ass been delivering pizzas? Nice planning for your
retirement.

Nice try, Davies. If we don't have to support you now, we will when
you're too old to cart your fat ass off to Pizza Palace any more. Nice
planning for your future, dummy. No talents, no skills, they could train
a monkey to deliver pizzas, and apparently they have. You can't even
keep up your rent payments on your public assistance housing
apartment...good thing you *do* get food stamps, isn't it?

The only chain Davies will be seeing is a daisy chain with him as the
pivot man and wearing a gag ball.

So all people with a call sign must like to be called "ham", worship morse code, love contests, hate CBers, and believe all things that are "ham"?

Some people do not identify with those things, and have their own interests.

>>> >Hamfests are where one goes to look for a bargain.
>>>
>>> Not me!...I go to check out the hot babes!

Actually, thats not a bad idea. There have been a few good looking women there, at a couple of hamfests. However, only occasionally, not at every hamfest.

Who knows where they came from. Some were helping set up the booths. Some were relatives of ham, perhaps?

Also, you will be among hams. Most of them will be too occupied with ham stuff and not be interested in the women there. So there will be much less competition.

There is no requirement, formal or informal or otherwise, to follow any particular, so-called culture. The term "ham" is, and has been for approximately 100 years, a term meaning amateur radio operator. One hundred years ago, there was no CB and there were no contests. Morse was a necessity but hams were working diligently on better transmitters and working towards developing voice transmissions. When the term was coined, none of the factors that you list were pertinent and some didn't even exist.

They usually ARE you, Lennie.

My filter had 29 messages in it today...all of them except one was you and
Brain back-slapping each other with quotes like the one above.

Nice job...Real "professional".

Putz.

>rarely issues a citation.

The FCC >>DOES<< mandate "training"...IF you want a license you will have
to participate in a certain amount of training...

>The FCC does not run contests, sprints, DXCC, field days, or nets.

Whoa! Brain woke up for a few minutes!

>> > AMATEUR radio long ago CEASED to be a "pool of experienced morse
>> > operators" for any national need.
>>
>> When did it cease, Len?
>
>"long ago"

When did it cease Brian? Back when you were operating from Somalia?

Or was it when unlicensed devices started playing a "major role" in
"emergency comms"...?!?!

>> And here's a fun fact: The Basis and Purpose never used the phrase
>"experienced
>> morse operators". Just "experienced operators" - no mention of modes.
>
>So the Basis and Purpose never emphasized (favored) one mode over

And also the needed knowledge.

>This is accomplished by the
>testing process. The connection is then similar: demonstrating the
>potential for responsibility and being part of a larger group. Notice that
>I tag it as potential since there will always be a few who are willing to
>put in the effort but then end up being problems.

It's not about putting in the effort but about demonstrating the requisite
knowledge. And said knowledge will include things that may not involve areas
the potential ham is interested in, but are required nonetheless because they
are part of the knowledge base of a radio amateur.

Now some folks say "I'm a professional/EE/technician" as if that somehow
exempts them from having to pass certain tests. But it doesn't work that way,
nor should it. If someone from outside amateur radio is truly qualified, the
tests are no big deal.
>

>> Have you ever seen a family where the kids are given everything they want
>> but not required to contribute anything? Ever see what sort of adults those
>> kids become?

>> >The kid gets a highly desired reward for work that he/she probably
>> >doesn't care to do but does it anyway to get the reward.

The important question is, who is the best judge of what the requirements
should be? The newcomer or the experienced ham?

Eeeew! I never heard of having to get a stencililian shot after a blanket party. They must have different kind of blanket party than what I thought. Maybe that is what traumatized the delicate marine.

But at least it all turned out well, his improved stencilling.

No, that's not what's happening, Steve.

We don't really know how many nocodetest Technicians there are anymore. FCC has been renewing Tech Plus as Techs for 51 months now, so an unknown number of current Techs are code-tested. In addition, an unknown number of Novices have upgraded to Tech, and an unknown number of Techs hold Element 1 CSCEs.

That is the very crux of the problem. Somehow too many have lost sight of
the fact that those with experience should be the ones to define the
requirements.

Lots of people and organizations will suffer when BPL takes over the 1.7-80 MHz frequency range in order to help the monopolistic power companies expand their kingdoms. The amateur radio sections of the HF spectrum will be the least likely protected sections. The NTIA report on the subject is cumbersome, but spells out quite well who will suffer when BPL takes over. All for a few dollars. I wonder if Ralph Nader has taken a look at this issue? It's big business running our government for their own profit. Should be one of his issues.

ak

http://www.ntia.doc.gov/ntiahome/fccfilings/2004/BPLComments_06042004.doc

The BPL Phase 1 Report (NTIA Report 04-413) is split into two volumes. Volume I is the main report, and Volume II is comprised of all of the appendices.

http://www.ntia.doc.gov/ntiahome/fccfilings/2004/bpl/FinalReportWord/VolumeII/APPC.DOC

1.7-80 MHz frequency range hosts a number of radio services and supports well over one-hundred-thousand Federal Government RF systems. Frequencies in this range are intensively used on the bases of time-and geographic-sharing by several radio systems. This appendix provides a more detailed discussion on federal spectrum usage and operations under each radio service. In addition, this appendix provides a general characterization of Federal Government RF systems that includes presentation of representative federal systems and typical system parameters.

http://www.ntia.doc.gov/ntiahome/fccfilings/2004/bpl/FinalReportWord/VolumeI/EXECSUMMARY.DOC

NTIA summarized technical and operating parameters of over fifty-nine-thousand (59,000) Federal Government frequency assignments in the 1.7-80 MHz frequency range. This information may help operators of BPL systems in development of BPL frequency plans. NTIA then defined representative radio systems for consideration in interference analyses: (1) a land vehicular receiver; (2) a shipborne receiver; (3) a receiver using a rooftop antenna (e.g., a base or fixed-service station); and (4) an

aircraft receiver in flight. Federal communications require exceptional protection on frequencies amounting to about 5.4% of the 1.7-80 MHz frequency range.

NEEDLESS TO SAY, AMATEUR RADIO WAS NOT LISTED IN THE FREQUENCY MITIGATION SUGGESTIONS, BUT DID GET MENTIONED ON PAGE C19:
http://www.ntia.doc.gov/ntiahome/fccfilings/2004/bpl/FinalReportWord/VolumeII/APPC.DOC:

http://www.ntia.doc.gov/ntiahome/fccfilings/2004/bpl/FinalReportWord/VolumeI/SECT9.DOC

In light of the above considerations and the high perceived interference risks, NTIA recommends that the FCC not relax field strength limits for BPL systems and that measurement procedures be refined and clarified to better ensure compliance. These recommendations should be effected as quickly as possible in order to better protect radio communications. Specifically, NTIA recommends the following BPL compliance measurement provisions.

Not that it's any of your business, Lloyd, but I have been a registered Republican as long as I was qualified to register - and that has been a long, long time. But when it come to this BPL junk, it's a case of big money vs. logical technological decisions - and both the Democrats and Republicans are subject to the big money payoffs. So, either party can take a shot at fixing our economy and our international problems, but if Nader would take a position against the power-industry-sponsored PAC bribes and their special interest BPL agenda - he can have my vote. And I would hope (with an anti-BPL position) Nader would also receive a lot of other votes from concerned radio amateurs and communications people who care about the use and abuse of the radio spectrum we all share. Nader won't win, but if the votes he gets are enough to swing the election to either of the two major parties, maybe - just maybe- the concerns of the almost half-million US radio amateurs won't be ignored by both major parties, and some rational appointments (technical, not all political) to the FCC Commission will result. Just a dream, I know. But as long as our political leadership is determined by who gets the biggest PAC bribes for their re-election, it really doesn't matter which party has control.

> Exactly! You seem very familiar with the situation we are dealing with.

Tony, I've been the target and victim of that type. I had a very successful hockey team going at one point. Along comes a new guy, an average player, but with *big* plans. "we gotta do this, we gotta do that". Finally he wanted me to get rid of some of the weaker players because they were "holding the team back". Keep in mind we were the best team in our division, and maybe lost two games that season. But I wouldn't have done it anyway, as they were my team mates.

So he charmed the assistant captains and some of the best players into a revolt against me, then charmed the league into believing that this group could compete at the next level. This left me out in the cold as far as that team was concerned. My son stuck by me and wouldn't play for the "new" team.

So yeah, you could say I'm familiar with that type. And that's why you are in trouble.

The only consolation was that the league commissioner called me a little while back to apologize for the shabby way I was treated in this whole mess.

And my ex-team? Well that was the other part of his call. Under the leadership of Mr. Charming, they went out and promptly fell on their faces. They won 1 game, (IIRC) and the average loss was by double digits. (a little hard to do in hockey) They were possibly not even going to be allowed to play in the league in the future.

Oh, and Mr. Charm? I'll give you one guess what he did.

Big plans and pipe dreams are all very good, but not a substitute for leadership.

You gotta boot this guy's sorry ass out, and soon! - pardon my French! 8^)

> > Why is it a "problem"?

The government doesn't view amateur radio as an alternative lifestyle.
There are no bill in Congress trying for a Constitutional Amendment.
Practicioners of amateur radio will just have to deal with it, that
is, if they view it as an alternative lifestyle.

> > So, amateur radio is NOT a hobby?
>
> It's not *just* a hobby.
>
> Would you tell volunteer firefighters and EMTs that what they do is "just a
> hobby"?

Different things. And they get paid for each run. Only repeaters
owners get paid in amateur radio.

> > Prove its vital need to the nation as a national service or an arm of
> > the military or a public safety organization.
>
> Why? Is that the criteria for something to be more than "just a hobby"?

Part of Basis and Purpose justification for being.

> > The FCC hasn't proved that. Only the ham-lifestylers try to prove

Do you agree that the nation needs a "Pool of trained radio operators"
which doesn't include Morse?

> >>And here's a fun fact: The Basis and Purpose never used the phrase

>radio amateurs won't be ignored by both major parties, and some rational
>appointments (technical, not all political) to the FCC Commission will
>result. Just a dream, I know.

No, a nightmare.

Back in 2000, Nader got enough votes in Florida to ultimately tip that state to Bush. Similar goings-on happened in other states. Exit polling of Nader voters showed that if Ralph hadn't run, half of his voters would have gone to Gore, a quarter to Bush and the other quarter to even smaller parties or they would have stayed home. If you look at how many votes Nader got in Florida and elsewhere, it's clear that if the above percentages had gone to Gore and Bush we'd have a different team in the White House today.

In effect, by splitting Gore's support, Nader put Bush in the White House. That's why the Green Party refused to support him this time around.

Remember Ross Perot? He did the same thing for Bill Clinton - twice! By splitting the support for Papa Bush in 92 and Dole in 96, he allowed Clinton to be elected with less than a popular majority.

>But as long as our political leadership is
>determined by who gets the biggest PAC bribes for their re-election, it
>really doesn't matter which party has control.

Sounds like a rationale to avoid saying Bush's support of BPL is a bad thing.

The idea that a Nader vote will somehow stop BPL is misguided. I don't know whether a vote for Kerry will help in the BPL fight, but you can be sure that a vote for Nader will simply help reelect Bush.

And remember this plain, simple fact:

A vote for Bush is a vote for BPL.

I see a glimpse of humanity from Steve every few weeks. I like him
much better that way. I'll pray for him tonight.

> Well, Stalker IS a representative of top-of-the-line amateur radio licensee.

Let's back away from that idea for a while. What? We've got maybe
four or five Extras on here who are congenital liars, spinmasters, or
just cranky old farts VS how many did Jim just post are in the ARS?

I don't think Steve and the others on here are representative of
top-of-the-line amateurs at all. As a matter of fact, I feel kind of
sorry for Jim. I think he's hung in here about a year too long. He
should have bailed before his lost his last remnant of dignity. His
post about "Morse Code Exams are a disincentive to CW use" really told
the tale. Since then he's gone over to the dark side and can't find
his way back. He's truly committed.

> All the PCTA love him. He be Tuff and Loud. Yell-Yell alla time.

I think they only support him because they think they'll all hang
separately if they don't hang together. I can't imagine them actually
coming forwad to say they love him. Just another case of group-think.
So suprised when Jim first said Bruce might be brilliant (hi, hi),
then said he wasn't proper amateur material.

Jim, many experienced amateurs have spoken agains the continued use of
the Morse Code as a filter. You ignore them, or say they must be
wrong. Luckily, hams don't decide, necomer or otherwise. The FCC
does, and they see merit in the reasonable arguments put forth by
those experienced hams.

Best of Luck

Please post the URLs of the surveys to back up your claim. How "many?" Is
it a majority or is it just a vocal minority?

So far the FCC has done nothing with the innumerable petitions nor have the
acted unilaterally to implement the change now allowed by the international
treaty. At this point it is premature to say that the FCC sees merit in
either side of the question.

Any intelligent person doesn't consider it a filter. It is simply a useful
element of ham radio that should be maintained. Some of the people against
using it as a filter are for keeping it as a part of the ham's required
knowledge.

>the proper paragraph.

Thank you. You are correct. There is no mention of the word "ham" in Part 97.

But it also needs to be the RIGHT experience.

Lennie the Liar has a lot of "experience" in SOME radio matters, but zero-point-zero percent of it is as an Amateur Radio licensee. Also zero-point-zero experience in "emergency communications". His "traffic handling" experience was as a radio clerk in the Army in the FIFTIES, and his experience in practical avionics goes back to his days as a STUDENT (never licensed) pilot back when Lear organ-grinder radios were the "state of the art".

Would you want HIM making binding decisions for you in regards to Amateur Radio policy?

When Lennie discusses matters of technical interest I sit up and pay attention...but that's ALL people like him CAN talk about.

I know people like him in my professional life too...people who can recite the textbooks and history annals inside and out...but don't have a valid clue as to HOW to apply what they know. People like that are dangerous.

Then that makes it all-the-more remarkable, Jim...since that number of
"Technicians" is even further diluted since "some quantity" of thier numbers
are "coded" operators.

Sure there is, albeit not in Part 97.

You won't find Police Officers refered to as "cops" in municipal or "official" documents, but if you say "cops", everyone knows who you are talking about.

>> A LIE, nursie. Bald-faced, out and out LIE.

Lennie, you can keep repeating that until you die, but it will not make it
any less true.

Believe it or not, not everyone in your "profession" was enamored with
your knowledge and skill. They certainly weren't enamored with your
personality. Perhaps if you had stepped off of your self-grandizing pedestal
once in a while...?!?!

>> You don't know squat about the electronics industry or military
>> electronics or civilian electronics other than reading about ham
>> radio in QST. YOU DON'T KNOW.

I know more than you care to acknowledge, but that's OK by me.

>> Now YOU produce those NAMES of the "some" you ALLEGE
>> "know."

Nope. They spoke to me on assurance that I'd guard thier confidentiality.
That they were career engineers at NADC and had occassion to "know" you is
adequate enough.

>> You can't because they DON'T EXIST. They are a fermentation of
>> your hate-filled obsessional, delusional psychosis in here.

Again, you may continue to make that assertion over and over but it will
not make it true. There is nothing "hate-filled" or "obsessional" about having
taken the time to do some research on some of the references YOU provided. I
just lucked up on the right people.

Should have kept your mouth shut, Lennie. You set your own trap.

>> Get some mental therapy. From a real shrink.

You mean YOUR "evaluation" wasn't adequate...?!?! Your "experience" in psychiatry is invalid...?!?! Say it isn't so!

>> It will help everyone, even yourself.

What would "help" here, Lennie, is if you would take it upon yourself to act your age, stop making assertions and proclamations that are easy to prove wrong, and actually DO the things you claim you are going to do.

>> Pbthththththth.

My point is made. Thanks for doing it for me.

>Len, he's a freak. Stay away. "Danger Will Robinson. Danger!"

The definition, as it appears in part 97, recently changed. By law,
now, a ham is anyone who is listed on the FCC database as being
licensed to serve as the control operator of an amateur radio station.

Twenty years ago, cellular telephony was just beginning and only a
few were installed, mainly in vehicles. Now there are millions and
one American in three has a cell phone subscription.

Not only that, FRS HTs (all unlicensed) are a regular consumer
electronics market item for $50 or less a pair.

CB has been there for over 40 years and may number 5 million or
so in the USA now.

"Licensure" is a fancy legal term for "being licensed" as in a
profession.

Not many dictionaries have the definition. It isn't in everyday
speech. :-)

Nursie wants to adopt it because he feels his federal amateur
authority license thingy is so Very Important and so Very Pro-
fessional sounding. [dreamland wish-fulfillment thing of his]

Nursie has a terrible need to Feel Important, Be Respected
for his mighty macho morse accomplishment. He is an Exxtra!
[dos equis brand, probably]

So, in his use of "current licensure" for his ham certificate, he
be Oh So Very Important Authoritzed By Federal Authorities!
Practically like he did an oral dissertation in front of a state bar.
[or "lube job"]

"Current?" I doubt that nursie twit can remember, let alone
apply Ohm's Law of Resistance and all that E, I, and R imply.

Play Act and Yell Yell he CAN do. :-)

>Next thing you know, he'll be "dialing, dialing, dialing" to get
>verification from our wives.

Nursie can't dial my first one (I be a widower for a long time) but my
second one is not only my high school sweetheart but also a
Masters degree holder in Social Work (Univ. of Illinois). Poor
nursie thinks he can out-wit my wife is in for a rude shock...she
has experience with crazies, but got tired of that and retired.

>He doesn't understand that our wives are off limits to his little
>dramas.

He doesn't understand MANY things!

Yiddish, Ohm's Law of Resistance, social graces, that amateur
is NOT a branch of the U.S. military just to name four...

>

I think I've figured out why the PCTA absolutely HATED any
thought whatsoever of a small suggestion I made long ago to the
FCC - that of having a certain minimum age for a license.

The PCTA are all acting so childish about that morse test
requirement that they can't stand not being able to continue to
be childish. "Wah wah wha...we gots to have a morse test!!!"
"All the 'big' people in radio know morse and we are 'big' people!"
All of which was fine for the 1930s...but hardly so 70 years later.

All the PCTA seemed to have innoculated themselves with
mighty macho morsemanship at an early age and are still
addicted to it and the Importance (!) of the mode to "all radio."

They are all - seemingly - a bunch of middle-age sitter-downers
(in front of their radios) wishing fervently to recapture their
youth lost so many years back. They want their youth back and
with that, their youthful ideals which were so Very Important back
then.

They don't really give a damn about anyone else. They want to
force the morse test on everyone because They were forced to
learn it by Their seniors. They want to get even. Such wishing is
typically of the childish. QED. Ergo, game, set, and match.

Mama Dee and Rev. Jim say that "the experienced"
(all those who love honor cherish and obey morse code) MUST
be "in charge" of determining the whichness of the what.

Regression is the better part of their valor. Or stasis.

Territorial Imperative! Turf!

Mama Dee has TOLD US "children!" What she say be da Law! :-)

Dee, so many of "you" have lost sight of the fact that amateur radio
was not created in your images nor do "you" have all the power to
take over the playing field.

Sorry to subvert your endeavor to "take charge here," but there is
no emergency requiring what is tantamount to martial law by "the
experienced."

If "the experienced" had their power, hams would all be beeping
away on HF with no voice privileges and the VHF and above
bands would be non-existant ("only real hams use morse on HF").
"The Bands" would remain in stasis of the 1920s and not advance
much at all.

Why do you wish to subvert democratic principles when it comes
to the hobby of ham radio?

>There is no requirement, formal or informal or otherwise, to follow any
>particular, so-called culture.

Peer pressure! Especially from the Exxtras (dos equis or otherwise)

>The term "ham" is, and has been for
>approximately 100 years, a term meaning amateur radio operator.

According to the ARRL the word "ham" was applied by PROFESSIONAL
morsemen on amateurs for their poor sending. It was a term of
DERISION (scorn, ridicule).

>One hundred
>years ago, there was no CB and there were no contests.

Radio, as a communications medium, is 108 years old.

There were contests of all sorts 108 years ago! Sunnuvagun!

First Modern Olympic Games were held in 1896...same year
as the first demonstrations of radio. No radio per se at the
first of the Modern Olympic Games. How about that?

>Morse was a
>necessity but hams were working diligently on better transmitters and
>working towards developing voice transmissions.

First radio voice transmission was in 1906...done by a pro, not an
amateur. Reginald Fessenden.

The Pros developed the "better transmitters" and the better
tubes for those better transmitters. It's in all the text books.

>When the term was coined,
>none of the factors that you list were pertinent and some didn't even exist.

...and Mama Dee was THERE! :-)

"What day was it? A day like all days, filled with those events that
alter and illuminate our times...and you were there...!"
- tag line for CBS radio/TV show "You Are There."

>either side of the question.

Back in 1998, the majority of those who commented on the restructuring NPRM not
only supported code testing but supported code testing at more than the minimum
5 wpm level. The vast majority of those commenting were licensed US hams.

In the comments to the various recent petitions, the number of *individuals*
(again, the vast majority of whom are licensed hams) supporting continued code
testing is the majority.

Those opposed are the minority. Heck, in its 8 or so years of existence,
"No-Code International" (remember them?) has not been able to attract even 1%
of US hams as members - even though there are no dues and no renewals.
>
>Any intelligent person doesn't consider it a filter. It is simply a useful

>knowledge.

The term "filter" can be applied to any test or requirement. A written test "filters out" those who can't or won't pass it. But it does not guarantee that each and every one of those who does pass it will abide by all of the rules and regs and be a good ham. No test can guarantee that.

You are correct, sir!

The definition of "holds a valid amateur radio license" is that you are in the appropriate database. Actually having the paper document is not the determining factor - the databese is.

Thnaks for the update

97.

Government documents always use formal English. "Ham" is an informal term
so is not used in government documents. However just check a good
dictionary and you will find the definition of "amateur radio operator."

The crux of the problem is that somehow too many think that they
define the requirements. The inmates think they are in charge of the
asylum.

We cannot draw any conclusions about how much dilution is going on, Steve,
unless we have more information.

Based on the information I have presented, it's possible that the number of nocodetest Technicians is dropping. It's also possible that the number is growing! Without more information about the mix of those who hold Technician licenses, we can't be sure.

We only know that the total of Techs and Tech Pluses is dropping. That could be due to all sorts of reasons, including upgrades, dropouts, slow renewals, fewer newcomers, etc.

> Seems to me this guy talks a rope. OK, fine, put him to work on *one thing*.
> Like "OK, get us a speaker for the next meeting". Then stand back.

Dunno if you read my other reply, Jim. There was the explanation of why. Normal people don't act like that, and if someone like that ever shows up to play for a team of mine again, they'll get a "thanks but no thanks" really quick.

Have you ever met a person that within 5 minutes of meeting you, feels compelled to tell you all kinds of details about their life that you'd normally share only with very close friends? That's a similar sort of personality, only more passive than the type that want's to run the club after 2 meetings. Bad news.

The end result is always that they quit. So we might as well cut to the chase. That way there is less damage. If I would have just tossed the guy early on, there would have been a hockey team doing well and paying it's bills, instead of a team in disarray, eventually disbanding and costing the league money that other teams have to make up. One person with the con man ability messing up things for several hundred people.

That's how.

...And if you knew how he, at best, twisted the truth, or at worst, outright lied, then you wouldn't trust him either. The specific case I cite is of historical record in this group. I was not personally involved, but do know the parties who were - and the truth of their stories.

>
> Unless you can prove differently...?!?!? (My bet's on "PO'd indignation"
> more than valid complaint)

You don't have to tell me what the IRS allows - remember that I used to BE a "revenuer." The only way for "newsline" to have expenses exceeding $1k/month, after comparing their operations to that of others like "RAIN" and "TWIAR" is if BP is paying himself a salary that is at least 50% of that amount - much more than what he is representing to the public. I haven't gotten around to pulling his form 990 yet (via a request on form 4506-A), but we already know what we're going to find there....

You will note that it's no secret that I have done a form 990 search on one of the local amateur repeater frequency coordination organizations a few years ago, and upon finding no filings (yet a collection of "dues" from members), asked the NFCC to decertify them. This was in addition to their failure to even acknowledge coordination applications filed with them or act on any (any action - acceptance, denial, or even receipt). That particular group has since become a bit "more responsible" to the public since then....

Be careful about what you suggest - you may get it.

Additionally, there is no legitimate purpose for him to post his entire transcript weekly. Those who want to read it will go to his website where it exists and don't need it here. To post it here (instead of merely posting a

link to it when it is revised each week) is SPAM - and YOU KNOW IT.

> amateur. Reginald Fessenden.

Wrong again, Len!

Fessenden held an amateur license. He was a ham as well as a "pro".

> Where in the world do you get that weird concept?

From his public statement that it costs newsline $1k/month to do its business, when his nearest "competitors," RAIN and TWIAR do it for $100.00/month. The only way that it can cost newsline 10x as much is if he is compensating people for the activity (which in itself is permitted), but it is the extent of the compensation that must be occuring that is of concern.... The "ARRL news" is not comparable because it's part of a larger organization that does other things and we don't have the requisite information to separate just the news-gathering costs from the other activities.

> Non-profit means there can be no profit, to pass on to shareholders (or
> whatever).
>
> You can have a non-profit organization that makes money. But, they have
> to put the profit back into organization.

...But not into the shareholders' or employees' pockets beyond "reasonable" compensation. The issue is that in this case, it appears that the compensation exceeds that which is reasonable after comparison to that of his closest competitors....

> And any but really small non-profit organizations, such as the local ham

> of the organization, but there is nothing to limit what they get paid simply
> because it's a non-profit organization. I'm sure many non-profits would argue
> that by paying a good salaray to key people, they are able to operate well.

Ah, but when more than 50% of the gross receipts go to salary, then what it really becomes is a conduit to merely compensate.... Let's look at the information that has been made public about this type of activity:

The competitors report that it costs them $100/month in phone calls and other administrative functions, so lets give ARN that. They do not compensate their news gatherers.

In addition to that expense, ARN maintains and distributes its bulletin by phone line (an expense that TWIAR and RAIN don't have). Various phone numbers across the country are sponsored by OTHER GROUPS, but the Santa Clarita main number ARN pays for itself. Between Verizon (formerly GTE) and SBC (formerly Pacific Bell), Verizon has the higher rates. [I don't know which telco actually serves the number, but even if we assume the more costly one, at worse, we're overestimating the cost but not by much.] A flat-rate area phone number costs about $29/month after taxes, but lets assume that his call to update that isn't local but intra-lata long distance, so let's call that expense $50/month.

We've now accounted for $150/month of expenses, but ARN reports that it costs $1k/month, so where is this other $850/month actually going? There may be some additional overhead for the web site and domain name, but there is no way that one will find enough of those or any other expenses sufficient to explain the cost of $1k/month OTHER THAN salary that BP puts into his own pocket. I conclude that about and no less than 75% of every donation ends up in his pocket - and that is a conservative estimate.

If this is wrong, then why, when I challenged him on this, he would NOT disclose where or how the donated funds are being allocated? My assertion is simple: He doesn't want to tell the public that this is really a scheme. That's the ONLY reason why any [IRC 501(c)(3), since he claims deductibility] non-profit would not provide a breakout of how their donations are applied.

Note: If ARN is a non-profit, but not under subsection 501(c)(3), then donations to it are NOT tax deductible (nor is a form 990 necessarily required by them - but a different form may be), but then to state to the public that the donations are deductible would be an act of fraud that is prosecutable.

Nice theory, nice warmy feely thoughts but no cigar. The guy already
has a history. I'm sure you agree that one has to be a compelete idiot
if one ignores history and that leopards don't change their spots.
Your approach is a waste of time. HE passes out the jobs, all of 'em,
it's his way or no way, that's the way these types are. He needs the
door before he can do more damage and completely destroys the club.

Doesn't matter because the question pool committee has determined that C is the
correct answer. Note that there is no answer which reads "Calinars only".

Besides, you should know by now that a new type of superconducting
nanotechnology zinthorp has been developed that is real, not theory.
Impractical now because of the requirements for liquid helium cooling but in a
few years, who knows?

And if you bothered to look at the current .113, there is also a "waiver" for
retransmitting NOAA/NWS weather transmissions - with the limitation that it is
NOT done on a continuous basis (communications emergency or failure
notwithstanding for which the rules in .400 ff. take priority anyway).

> them either. What would be the point of having those alert tones squawking on
> 2M or 70CM...?!?!

Because those alert tones are part of "EAS," while the normal weather status
transmission isn't. Emergency communications that may affect life or property
are always ALLOWED - and the concept of the FCC enacting the new EAS to replace
EAB was to have it reach as many [people] as possible as soon as possible.
Yet, we have the FCC's Mr. Cross now saying that this is forbidden. If so,
then I think he's insane - a rules violation is clearly less significant than
saving someone's life.

> So...We bump the $20 up to $40...I can find at least a half dozen radios
> in that price range that >>DO<< have SAME in them. So what then?
>
> Personally, I'd rather keep the radio seperate so I could monitor NOAA

Well, no one said that YOU (or anyone else) HAD TO interface your local
repeater to a SAME-activated weatherradio. However, now that the rules do
permit it, why is there this "strange" interpretation of that rule?

> >> The places where NOAA transmissions can NOT be heard are extremely

> Re-read that LAST LINE over and over, Dieter.

I have. That does not forbid automatic retransmission. It does forbid
scheduled, regular, and/or continuous retransmission. It permits occasional
retransmission. [Emergencies are also not "regular" in nature.]

As for automatic, the issue arose with regard to a device that would be
interfaced to an amateur repeater, and repeaters MAY BE AUTOMATICALLY
CONTROLLED, so that's where the "automatic" aspect comes in.

> Propagation, weather forecasts, and shuttle retransmissions may not be

Not any more so than under circumstances where no shuttle or weather
transmissions are occuring. Amateur frequencies are often included in
scanners - devices which don't require an FCC license to operate.

The only thing I gather from your statements is that you believe that ANY
retransmission of non-amateur communications is a rules violation. That also
is not what .113 says - it is permitting SOME types of non-amateur originated
communications to be [re]transmitted on an OCCASIONAL basis.

> >> Lastly, for someone who keeps whining about another Amateur posting

> inappropriateness of those posts...?!?!

1) I don't read every newsgroup.
2) Spam happens. You expect me to "explain the entire universe" to you?
3) There is quite alot of "shit" posts that happen here.
4) What is the point of complaining about someone else's off-topic post if

nothing can or will be done about it? Here, there is someone to whom I can complain about to get it stopped.
5) For the most part, people RESPECT the purpose of the group and usually stay on topic. Amateur radio seems to attract anarchists by its nature - and it is clear what we have here is anarchy.

> Lastly, I didn't imply that this wasn't about the rules...It certainly
> is...I just said I find it ironic that you want to play junior disc jockey with
> NOAA weather broadcasts.
>
> WHERE in LA County can you go and NOT hear an NOAA broadcast, Dieter?

If their transmitters fail, ANYWHERE! :-)

Remember that Mr. Cross's comment was the same when the issue of a communications emergency was brought up. However, is your question even relevant? It doesn't matter that I can hear up to 5 NWS transmitters where I may be. The issue was with regard to the retransmission rule. To retransmit, it first must be heard (obviously).

> I've been in Mojave, up to Bishop and down in Imperial County and was

The Olsen Twins are not in the rules. NWS weather transmissions are. I leave it to you to get the rules amended to add them if that's what you really want.

Yet, it is exactly that type of transmission that Mr. Cross called ILLEGAL in his comments. He had better never need that system for one of his children: "Sorry Mr. Cross. You, as an FCC employee, said that retransmitting an Amber Alert was illegal. We can't help you."

??? Why are you addressing THAT to me? I didn't say that. SR said it.

I said that it IS (or should be) allowed, and that the FCC's William Cross
seems to be wrong as his answer appears to be contrary to the public good (an
implied mandate for the ARS via its "goodwill" and "emergency communication"
aspects).

> What use would an alarm be if it occurred on a regular basis?

No kidding. Obviously, some responders to this topic have missed that point.

A LIE, nursie. A Bald-faced (except for scraggly moustache),
out and out LIE from an ignorant SOB who doesn't know one end
of a REAL electronics lab from an advert in QST.

You worked how many months as a purchasing agent in a set-
top box maker and NEVER got to do any engineering work?
That was the ONLY electronics "engineering" job you had in
your entire life (I can't speak for your other personalities and I
don't know the work environment in your fantasyland).

I've been in aerospace since 1956, in electronics engineering with
engineering design responsibility since 1961, through "retirement"
of 1997 and beyond. You are being some kind of "judge" of
professional engineering work?!? Bullshit. Out and out bullshit.

> Believe it or not, not everyone in your "profession" was enamored with
>your knowledge and skill.

Geez, you ARE obsessed with hate and loathing, aren't you?

You've worked at ALL the places I've worked, ey senior? You
"knew" all the people I've worked with all that time? Of course you
did, you just said you did. Hi hi and a ho ho!!!

>They certainly weren't enamored with your personality.

Poor nursie. Can't get along in the big leagues. Speak nasty to
all who've made a career in that. Tsk.

>Perhaps if you had stepped off of your self-grandizing pedestal
>once in a while...?!?!

Perhaps nursie see a competent mental health professional
and get some HELP for hisself?

I got no "pedestal." I did what I did, got the money I got through
working for it, got the education for the tasks to make more
money to do more tasks, did them all and had fun doing so
(except all the field trips were a PIA even though I got to see
strange places and interesting things.

In my business there was NO room for all the bullshit baffle-
gab of marketing and selling. Electrons, fields and waves work
by Their rules, not some bullshit artist who doesn't know squat
about Ohm's Law of Resistance! Geez!!!

Electrons, fields and waves don't care squat about Credentials
or pretty pieces of paper making someone out to be Exxtra,
no matter how many bottle of dos equis the Exxtra drank.

>>> You don't know squat about the electronics industry or military
>>> electronics or civilian electronics other than reading about ham
>>> radio in QST. YOU DON'T KNOW.
>
> I know more than you care to acknowledge, but that's OK by me.

Yah, ve can all tell, by golly. Big Exxxxtra, doo beeping. Big
man, heap smarts. Yah, yah.

>>> Now YOU produce those NAMES of the "some" you ALLEGE
>>> "know."
>
> Nope. They spoke to me on assurance that I'd guard thier
confidentiality.
> That they were career engineers at NADC and had occassion to "know" you is
>adequate enough.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

Nursie, you one BIGG BS tosser. LIES. Bullshit. All LIES.

You don't have ANY "names," Stalker. None.

Ignorant twit. I was a field engineer (temporary assignment) for RCA
Corporation, visiting NADC in six trips for a total of about three months,
1971 to 1972. The lab group I met with also came out to Van Nuys on
three subsequent trips. I know who they are. One even visited my
residence. YOU don't. You haven't got a clue. You are BLUFFING.

Okay, I call. Show your hand. Tell everybody.

>>> You can't because they DON'T EXIST. They are a fermentation of
>>> your hate-filled obsessional, delusional psychosis in here.
>
> Again, you may continue to make that assertion over and over but it will
>not make it true. There is nothing "hate-filled" or "obsessional" about having
>taken the time to do some research on some of the references YOU provided. I
>just lucked up on the right people.

More BULLSHIT. BLUFF. Freak-out imagining by nursie, obsessed
with hate and anger.

Okay, just tell the lab group's name. Describe the project that RCA
sent me on. Describe the "competitor" project, the company name
at least (well known, located in the upper midwest). Describe the
aircraft used in the airborne testing, where they flew. Tell what
"Yankee Bravo Tango" meant in the NADC group.

You can't do it, can you? BS artist with no talent, trying to use a
littly bitty schoolchild's paint brush to cover an entire billboard.

> Should have kept your mouth shut, Lennie. You set your own trap.

No "Trap." Been there, done that. Got the evidence.

You hate that. TS. Too bad for you.

The only secrets I got are under Title 18, USC. Not many left.
The rest is all out in the open.

> What would "help" here, Lennie, is if you would take it upon yourself to
>act your age, stop making assertions and proclamations that are easy to prove
>wrong, and actually DO the things you claim you are going to do.

"Acting one's age?!?!?"

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

You mean like YOUR maniacal "laughter?!?" :-) :-) :-)

What, you've gotten yourself through med school, can "officially" sign MD behind your ham call? :-)

Go for it! When you are done there, go to work for Disney in their "imagineering" for Disneyland. All fantasy you dream up, nursie, bullshit, pushed on by lots of hate and obsessive need to destroy those who don't agree with you. Might make a nice horror addition to Disneyland...or, in your case, Dizzyland.

You are in psychiatric services about as much as your short-term purchasing agent job made you "knowledgeable" about electronic engineering. Ptui. Zero. Zip. Nada. Nyet. BS.

[introduction to another hate-filled obsessive need to defame another...]

> Lennie the Liar has a lot of "experience" in SOME radio matters, but
>zero-point-zero percent of it is as an Amateur Radio licensee.

"SOME?" Like since 1953? Like since 1956?

What has nursie done in that other "SOME" of radio? Answrer: Nottadamnthing. :-)

>Also
>zero-point-zero experience in "emergency communications".

WRONG. Use Rev. Jim's Time Mashine and go back to 1994.
Some earth-shaking news awaits you, nursie.

>His "traffic
>handling" experience was as a radio clerk in the Army in the FIFTIES, and his
>experience in practical avionics goes back to his days as a STUDENT (never
>licensed) pilot back when Lear organ-grinder radios were the "state of the
>art".

WRONG. WRONG. WRONG. Tsk, tsk, tsk.

MOS 281.6 - Microwave Radio Relay Operations and Service
Supervisor plus brevet MOSs of Fixed Station Transmitter

Operations and Service, Carrier Systems Operations and Service. [the "point-6" in that old MOS numbering is the indicator of supervisory duties which I had as an E-5 S/Sgt] 1953 to 1956. "Three up and one down" after just 2 1/2 years. Earned.

"Practical avionics" includes airborne radar (both military and civilian), airborne radionavigation equipment (TACAN, DME, VOR, Localizer, Glideslope, and Marker Beacon) plus several missle systems which few will know about, such as the old Hughes Aircraft "Falcon" series or "Maverick." That at, in chronological order, Ramo-Wooldridge (the "R" and "W" of TRW now), Micro-Radionics Inc., Van Nuys, CA, EOS [Electro-Optical Systems] a division of Xerox, Pasadena, CA (mostly spacecraft stuff), RCA Corporation EASD (Electro-magnetic and Aviation Systems Division), Van Nuys, CA, Hughes Aircraft Missle Division (Hughes for the 2nd time, this at the same buildings once leased by R-W), Canoga Park, CA, and Teledyne Electronics, Newbury Park, CA [designers and manufacturers of military transponders, what civilians call "IFF"]. Wanna talk how that marvelous VOR works? No problem...old NARCO box or an RCA 3 1/2" instrument package that has it all...Nav and Com, with MB and LOC and GS all packed in behind the OBS. Wanna talk ground station VOR or TACAN? No problem there, either. Wanna talk on-the-air while airborne? No problem, done that too and not just with some UNICOM at a grass field. More like the Western Airlines maintenance facility at LAX.

BTW, oh great and ignorant bird of the radio universe, the Army didn't have a "message center" at ADA. Other Army message centers fed it and were fed in turn...ADA kept the radio circuits working. They still do that as they did at Fort Irwin in 1989 for regimental level field radio (quite a bit different than 35 years prior). No manual telegraphy in the 50s, not in the 80s, the 90s, or this new millennium.

Sunnuvagun! Who would a thought it? No CW! :-)

> Would you want HIM making binding decisions for you in regards to
>Amateur Radio policy?

Yes, why trust the FCC to regulate amateur radio? None at the FCC need have ham licenses to do that. Not even the FDA needs ham licenses and they stamp the hams. Too.

Riiiiiight...keep the beepers in charge of hum raddio...those mighty macho morsemen keeping the airwaves pristine with the musick of morse as they did in the old, old days. Archaic Radio Service, the ARS of yeasteryear! [all rise...]

> When Lennie discusses matters of technical interest I sit up and pay
>attention...but that's ALL people like him CAN talk about.

As Luke said to Obi Wan Kenobi, "Force off, Obi!"

Your NF off! [Noise Figure, that is...wayyyyy too high...]

> I know people like him in my professional life too...people who can
>recite the textbooks and history annals inside and out...but don't have a
valid
>clue as to HOW to apply what they know. People like that are dangerous.

Oh, my, the mighty macho morseman crowns hisself King of the
Karing once again. Real MDs who've gone through the rigors of
med school and internship (and having to listen to know-it-all
nursies try to tell them what to do) "don't know enough to apply!"
Oh, my, TN state should have given him a MD to put behind his
name? [yes, if it means "Morose Dysfunctional"]

When the chips are down, two things happen with nursie: First,
he don't know one chip from another or how they are supposed to
work; two, his Mouth will get working and his pudgy fingers will
type out all kinds of schmucky nastygrams in the newsgrope
(mouth has to snarl and mutter as he shouts via the keyboard).

Want radio OPERATING? Sure. No problem. Done it from
land, from water, from a cockpit while aloft. Want space comms?
Sorry, you can't do that yet, NASA can't afford to send Morose
Dysfunctionals off on expensive spaceships. I'll just stand in the
JPL mission control room (as I've done for a few missions) and
watch the live data come in from Mars or wherever. That be happy.
I've "worked" a station ON the moon. Stalker Stevie never did.

Goldstone more fun place, though it be hot, hot. Clear Lake fun
for a visit but I wouldn't wanna work there ("failure no option" in
the old days, not quite so now). Wanna get up at Oh-Dark-
Thirty to prep telemetry for an avionics package on a fast mover?
Done that too. Edwards. China Lake. Kern County Airport #7
(Mojave). Phooey, like my mornings quiet and late. Who needs
all that sweat to push envelopes? :-) Given my sweat, pushed an
envelope a couple times, sweated in the labs producing goodness
and newness, seen it work.

Ham radio would be fun. But, all the "intelligent people" wanna
recreate the hoary halcion days of the 1920s and 1930s. Phooey
on them and Morris Goad. "Intelligent people" love spark Tx and
Galena Rx? They be nutso, whacked-out. Keep on recreating
Civil War of a kind, the ones between the beepers and talkers.

Beep, beep.

>it a majority or is it just a vocal minority?

Official numbers with lots of statistical qualifications?

Or the "official" views of the ARRL (which is decidedly biased in
favor of morsemanship for amateurs)?

[readers WILL know what your answer will be]

>So far the FCC has done nothing with the innumerable petitions nor have the
>acted unilaterally to implement the change now allowed by the international
>treaty. At this point it is premature to say that the FCC sees merit in
>either side of the question.

The number of petitions for consideration are 18. Rather a large
number for such a small radio service. On top of that, the FCC is
going to do an R&O which is largely "rules housekeeping" and has
nothing to do with code testing.

Your point - and it must be obvious to most readers - is that you
are miffed as well as adamant about keeping the code test.

>Any intelligent person doesn't consider it a filter.

Any "intelligent person" would consider your statement as utter
NONSENSE! :-)

Mama Dee, you are sounding way too officious and arrogant and
elitist when saying that "intelligent people don't consider it a filter."

Intelligent people can see the whole of the radio environment
and conclude that the morse code test is just an old anachronism.

>It is simply a useful
>element of ham radio that should be maintained.

Repeated NONSENSE. Some consider it "important" solely
because They were able to master it...and want to use that to
keep "their territory" as private as possible for "their own kind."

>Some of the people against
>using it as a filter are for keeping it as a part of the ham's required
>knowledge.

Please post the URLs of the surveys to back up your claim. How
"many?" Is it a majority or is it just a vocal minority?

Are there any Stanford-Binet IQ scores included with those
surveys? After all, ONLY "intelligent people" will want to keep
the code! :-)

I used to pray for him. Some time ago. Reason was I got this
faraway guffaw smothered by a divine hand, I think. It went something
like this: Bwahahahahahahahahahahahahahahahahahahahahahaha!

>> Well, Stalker IS a representative of top-of-the-line amateur radio
>licensee.
>
>Let's back away from that idea for a while. What? We've got maybe
>four or five Extras on here who are congenital liars, spinmasters, or
>just cranky old farts VS how many did Jim just post are in the ARS?

Whatever Rev. Jim's source, it is the only one "correct."

I prefer Hamdata.com tabulations, not the "interpreted kind." All
those sources have fast broadband access to the SAME data
files (enorrmous ones, BTW).

I see your point. I also see all the PCTAs who are arrogantly
adamant about Being So Right about their viewpoints.

All us newsgrope readers see the same text. Those mighty words
of the PCTA (and their ilk) appear on everyone's screen. They have
their Say and So Be It. They are the Great Gurus. De facto, not
de jure. What is anyone to believe about U.S. amateur radio if
their only source of information is from those same OFs?

>I don't think Steve and the others on here are representative of
>top-of-the-line amateurs at all.

No? :-)

I agree with you...knowing more radio amateurs off-line than on-line. KD6JG is what I consider a good friend and I'm hoping to say hello to him in mid-California a bit later. W6MJN was Best Man at my wedding. That's just two out of many. <shrug>

>As a matter of fact, I feel kind of sorry for Jim. I think he's hung in
>here about a year too long. He should have bailed before his lost
>his last remnant of dignity.

Jim was on the AOL ham pub before I saw him on r.r.a.p. Was like a Newington-south recruitment drive on AOL to me. Came off like an 80-year-old OF. QED. Couldn't take much controversy then, can't now.

>His
>post about "Morse Code Exams are a disincentive to CW use" really told
>the tale. Since then he's gone over to the dark side and can't find
>his way back. He's truly committed.

All that "committment" gets to all. Amateur radio is NOT a marriage and life ever after. The PCTA cannot change their minds nor let anyone else change their minds. Not ever! :-)

"MARS >>IS<< amateur radio" is from an extreme case. :-)

>> All the PCTA love him. He be Tuff and Loud. Yell-Yell alla time.
>
>I think they only support him because they think they'll all hang
>separately if they don't hang together. I can't imagine them actually
>coming forward to say they love him. Just another case of group-think.

Well, united they hang or they hang separately. Either way, the hanging happens.

But, here's the thing with Yell-Yell: Everyone against him is "really me under a pseudonym!" So, what you just wrote is what I just wrote, since "we are the same person!" Hi hi hi hi. Bang the conundrum slowly... :-)

> So suprised when Jim first said Bruce might be brilliant (hi, hi),
>then said he wasn't proper amateur material.

Broose is just a character...with or without a license. :-)

LenAnderson@ieee.org

Rev. Jim MUST build up amateur radio as something more than
it is. Ergo, analogues with Public Safety Services, etc.

I don't know exactly why he does that, just that it is common
practice among so many amateur radio hobbyists to build up
their avocation into some noble cause.

>> > Prove its vital need to the nation as a national service or an arm of
>> > the military or a public safety organization.
>>
>> Why? Is that the criteria for something to be more than "just a hobby"?
>
>Part of Basis and Purpose justification for being.

Most of that is just Political Doublespeak. A radio service has a
need for existance in the eyes of Congress. Political doublespeak
with all its attendant puffery and noble-sounding words is a part
of that process. That happens in just about anything that is
legislated.

Weird thing about that political doublespeak is that some actually
believe each and every word!

>> > The FCC hasn't proved that. Only the ham-lifestylers try to prove

The FCC actually does have some "training sessions!" Mostly
put on by the Office of Engineering and Technology.

The thing is that NONE of the "training sessions" involve amateur
radio. :-)

That's on their web page, by the way.

>> > The FCC doesn't really "set standards," only sets regulations.
>>
>> Wrong again!
>
>How many parts per million?

That's not the point, Brian. Rev. Jim MUST call all opposite-to-
his-opinions as "wrong." :-)

Rev. Jim sets the standards. De facto, not de jure. Therefore,
all what he say is "right" and anything opposite is "wrong." :-)

>> >>> AMATEUR radio long ago CEASED to be a "pool of experienced morse

Careful, Brian. He is another Exxtra! With a Southgate Type 7
and knows how to use it! :-)

>> You're neither are a professional communicator nor an amateur radio
operator,
>> Len. Just some guy who likes to flame amateur radio newsgroups.
>
>Len is a professional. You just refuse to accept it. That makes you
>wrong. That is all. And it won't be the first time.

Rev. Jim gets off on calling others "wrong."

If he ever met William Wong of Hewlett-Packard, he'd call him
"Wrong." :-)

>> You're on the outside looking in.
>
>I'm on the inside, yet I see Len's point.

Brian, that's part of their Elitist "schtick." (Yiddishism used by
entertainment industry meaning "a part of the act")

PCTAs MUST keep the code test for the License Test. Morsemanship
is about all they have to show up the others in radio. [like the rest of
radio gives a damn about manual telegraphy]

PCTAs bought into the morse-code-is-king thing long ago and won't
let go of that Belief System until well after they pass on......

Riiiiiiight!

All those evil, nasty No-Code-Test Technicians never happened!

It's all an insidious propaganda ploy by some nasty group like
Al Quieta to remove precious, pure, unadulterated Morris Goad!

[Al Quieta is presently located on the Western Front...]

Beep, beep.

Dozens! Hundreds!

But, even more, there must be a National Oracle at Delphi built for hum
raddio.
The guvmint can install Rev. Jim as The Head Oracle. He know what "right"
and what "wrong." Can spend all day, all night Oracle-izing the Great
Words.

Might last a week or so. Before he stoned, that is. Or is it be stoned?

Love to stay and chat but have to listen to my favorite AM radio program,
the one that is transmitted over a single mike in the antenna feedline of a
spark transmitter, the "Reggie F Super Special" broadcast unit. Real
successful it was in the commercial broadcasting field...

That's the RIGHT way to listen to radio broadcasting...just like they
did way back in the beginning of time of radio.

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

[sorry, that one got away from me.... } :-)

I DID read them, Dieter. You however, seem to think that ANY
acknowldegement of it's opportunity means you can retransmit that
audio "automatically".

The rules specifically say no.

> > Neither my $150 2 meter rig nor my $350 V/UHF rig have SAME function in

No one's life is likely to be saved due to retransmitting NWS
audio on an Amateur transceiver, Dieter. Amateur transceivers don't
decode the SAME codes.

> > So...We bump the $20 up to $40...I can find at least a half dozen radios

> I have. That does not forbid automatic retransmission.

It SPECIFICALLY says no automatic retransmissions, Dieter! ! !

> It does forbid
> scheduled, regular, and/or continuous retransmission. It permits occasional
> retransmission. [Emergencies are also not "regular" in nature.]

And without the intervention of a control operator (manual
operation), how do you determine which transmissions are in compliance
with Part 97...?!?!

> As for automatic, the issue arose with regard to a device that would be
> interfaced to an amateur repeater, and repeaters MAY BE AUTOMATICALLY
> CONTROLLED, so that's where the "automatic" aspect comes in.

You're trying to twist the regulation to fit YOUR interpretation.

You can try that excuse if Riley sends you a QSL, but the sting
from tjhe slap on the wrist you'll get will still hurt none-the-less.

> > So what would be your point? There's no way you can make those
> > rebroadcasts and NOT be assured that the broadcast was NOT being used by

>
> Not any more so than under circumstances where no shuttle or weather
> transmissions are occuring. Amateur frequencies are often included in
> scanners - devices which don't require an FCC license to operate.

No, they don't.

But FCC rules DO specify what we can "retransmit" via our
stations. Like I said...you go right ahead and push the envelope on
this one. I think you'll get your wrist slapped.

> The only thing I gather from your statements is that you believe that ANY
> retransmission of non-amateur communications is a rules violation.

Then you're not paying attention.

> That also
> is not what .113 says - it is permitting SOME types of non-amateur originated
> communications to be [re]transmitted on an OCCASIONAL basis.

And that "OCCASSIONAL" basis will require that a livign, breathing
person make the determination as to whether to make the rebroadcast.

THAT is NOT "automatic".

> > How come I don't find Dieter Stussy in any of those NG's howling about the
> > inappropriateness of those posts...?!?!
>
> 1) I don't read every newsgroup.

Just the one's where you might get your feelings hurt?

> 2) Spam happens. You expect me to "explain the entire universe" to you?

No I don't. However Bill Pasternak's posts are not spam. YOU
may not like them, but that's you.

> 3) There is quite alot of "shit" posts that happen here.

Most of them by persons who find it necessary to use profanity in
order to effectively express themselves. =)

> 4) What is the point of complaining about someone else's off-topic post if
> nothing can or will be done about it? Here, there is someone to whom I can
> complain about to get it stopped.

Yuo are one person "complaining" about a post that IS relevant to
this NG whether it meets YOUR definition or not.

> 5) For the most part, people RESPECT the purpose of the group and usually stay
> on topic. Amateur radio seems to attract anarchists by its nature - and it is
> clear what we have here is anarchy.

Only to you, and only due to your frustration with Bill.
>

No, I leave it to YOU to get the rules ammended to what YOU want.
Right now automatic rebroadcast of NWS transmissions is NOT legal.

So...Let me get this straight...You're PO'ed because BP is
legally compensating people "more" for thier inputs than other sources
do thiers...?!?!

Dieter, YOU are in the WRONG country, My friend!

> The "ARRL news" is
> not comparable because it's part of a larger organization that does other
> things and we don't have the requisite information to separate just the
> news-gathering costs from the other activities.

That's an excuse, Dieter. They certainly CAN seperate those
expenses.

> > Non-profit means there can be no profit, to pass on to shareholders (or

A "flat rate" number at $29 might be for residential service, but
certainly not for a business, even a charitable one.

> We've now accounted for $150/month of expenses, but ARN reports that it costs

> If this is wrong, then why, when I challenged him on this, he would NOT
> disclose where or how the donated funds are being allocated? My assertion is
> simple: He doesn't want to tell the public that this is really a scheme.

Is it?

WHAT has Bill offered in exchange for the funds that he HASN'T
provided?

It's not a "get rich quick" scheme, and he's certainly not
offering snake oil or other homeopathic remedies.

He HAS offered to run this service as long as he can do so and
keep himself fed and housed. And until I see him living on a beach in
Malibu or driving a Jag, you've not convinced me for one that he's
bilking ANYone out of ANYthing.

And at todays valuation, just exactly what do you think he's doing
with that money?

> That's the ONLY reason why any [IRC 501(c)(3), since he claims deductibility]

> the donations are deductible would be an act of fraud that is prosecutable.

Then stop your incessant whining and refer it to the Attorney
General's office.

If you're not sufficiently confident that you can make a case to
him that BP is doing something illegal, then chances are he's NOT
doing anything illegal.

Yep.

I used to wonder why some organizations had rules such as "you can't be an
officer until you've been a member for X amount of time" and "you have to serve
on a committee first, and you can only serve on one committee at a time", etc.
It's clear now.

> That's how.

No, it's quite right. You're the one who's wrong, Len.
>
> "Two-way" in 1906?

Yes. Two way transatlantic in 1906. Voice radio transmission was first
demonstrated by Fessenden in 1900, not 1906.

You're reference is six years late. Simply wrong. In error. Mistaken.

> When, between December 26 and 31 that
> year?!?!?

Nope. November. Look it up.

You probably won't do that, because doing so would prove you to be wrong.

> Must be. You wrote that. You are never "wrong." :-)

Wrong yet again, Len! Are you going for a record?
>
>>> done by a pro, not an

I didn't say *when* he held the amateur license. Just as you never said when
you were getting that Extra licesne out of its box. Been more than 4-1/2 years

now. Yes, that new Tech written must be a real toughie......

Fessenden was 1XS and later VP9F. See:

http://users.tellurian.com/gjurrens/famous_hams.html

But you probably won't.

We "KNOW"....?!?!

No, "we" don't.

You've been whining about his posts here for over two years now Dieter and I haven't seen a single thing that indicates that you've done anything BUT whine about it.

Nor do I think it would be a wise idea on your part.

>You will note that it's no secret that I have done a form 990 search on one
>of
>the local amateur repeater frequency coordination organizations a few years
>ago, and upon finding no filings (yet a collection of "dues" from members),

>
>Be careful about what you suggest - you may get it.

Then all you will have done is proven that you were right and I was wrong...the world will go on. I would say "Gee, Dieter, you were right". I might even send you a gift certificate for dinner on me...

So far all I see is your personal dislike for Bill Pasternak.

However if he WERE investigated by the IRS, these archives could be used to validate a personal vendetta by you against him...Since you seem to "know it all" when it comes to IRS policies and procedures, I assume you ALSO know what recourse Bill could have should it be proven that you tried to use the IRS as a source of intimidation against him, don't you...?!?!

>Additionally, there is no legitimate purpose for him to post his entire
>transcript weekly. Those who want to read it will go to his website where it
>exists and don't need it here. To post it here (instead of merely posting a
>link to it when it is revised each week) is SPAM - and YOU KNOW IT.

It is NOT spam, Dieter.

The content IS relevent to Amateur Radio practice AND policies, therefore is absolutely pertinent to this forum.

If you don't want to read it, skip over it. When I open my newsreader I can see the thread title, and if it's obviously spam (the aforementioned "SEE MY TEEN WIFE..." kinda crap), has anything to do with N0VFP, AB8MQ or "Twistedhed", I simply mark ir "READ" and that's that.

Good luck making your case. If I were asked to render an opinion on the matter to a federal investigator, you know how I'd vote.

The do what our club does when the SKYWARN net is active...

Read the announcement from the website.

The announcement is published on NWS's website...Print it off and READ it on the repeater. THAT way you comply with the letter AND the spirit of the law, plus you don't create enemies in the local repeater crowd for all the unannounced "alerts" that would ignore what ever was already going on the repeater.

So? That was your *job*, wasn't it, Len?

What's interesting is that you don;t mention that there were more than 700 *other* people at ADA when you were there...
>
> "Practical avionics" includes airborne radar (both military and

> Yes, why trust the FCC to regulate amateur radio?

You're not the FCC, Len.

> None at the
> FCC need have ham licenses to do that.

Actually, there are a few hams at FCC, making the rules and recommendations
about those rules.

More importantly, those folks are professional regulatory people. You're not.

Just another groundpounder. Heck, even I can use the lingo. But you keep reliving the past, leaving out the important details.
>
> Ham radio would be fun.

It is. But you're just a spectator there, too.

What really burns your bacon is that even with all your alleged professional experience, the FCC won't act on your recommendations and those of us who actually *are* radio amateurs won't bow down to you. And despite all your verbiage, you can't get some of us to respond in kind to your name calling and other word games.

> But, all the "intelligent people" wanna
> recreate the hoary halcion days of the 1920s and 1930s.

How, Len?

By requiring a simple one-time 5 wpm code test?

Methinks you dost protest too much.

I agree with Jim's historical view. The advent of reliable VHF/UHF with
digital readouts and digital frequency selection at reasonable prices is
what ultimately opened up the significant amateur use at VHF and above.
The addition of repeaters also contibuted greatly to the VHF UHF
increase in operations.

When I was preparing for the old Extra test (pre-April 2000) all I did was
keep retaking the QRZ.COM practice tests until I consistently got 90%
or better. I actually started getting concictently at 100%.

Given the subject material at the time and my lack of any specific
use of much of that material since, I'm not sure how I'd do. Answers to
questions
on space operations (FCC notification intervals), licensing and VE testing
rules, etc. don't stay with most people unless they have reason to
need that knowledge. Additionally, rules and regs can and do change
as we all know...so band edges, especially mode restrictions within a
specific band (e.g. novice sub-bands) change over time.

Good for you, Dan - and I'll vote for "none of the above," also known as Ralph Nader - as long as Mike Powell [previously with the Washington, D.C. law firm of O'Melveny & Myers LLP, where he focused on helping clients in matters involving telecommunications] is the FCC's chief cheerleader for BPL. Not only is my vote in protest of BPL being rammed down our throats by the power company PAC bribes, but because I'm tired of Democrats complaining that Nader only subtracts from their traditional supporters.

Looking at the Lenover21 vs N2EY debate on the first voice transmission, maybe we could make some headway by the following:

Fessenden first transmitted voice modulated spark in 1900. The reply to the transmission was via telegraphy. In the ensuing years, there were both spark and alternator telephony experiments. The spark had the disadvantage of a nasty hissing component in the audio, and the contemporary alternators were running at up to 10 kHz, not very satisfactory, because they weren't all that much above voice frequencies.

As time went by, alternators were built that could run at much higher frequencies.

The first two-way transatlantic telephony was performed in 1906 at a frequency of around 88 kHz.

This is all in the historical record.

Jim accepts it, and Len appears not to.

Len, what is your rationale for that?

- Mike KB3EIA -

942. Petition for higher allowed power if BPL happens?

Newsgroup: rec.radio.amateur.policy

If BPL does happen full blown, maybe we could petition and
get a change of the maximum power allowed rule. Namely ten
times what the limits are now. 1KW to 10KW for example.
We're gonna need it to carry on desired communications...

>>>communication was being carried out.
>>
>> Jimmie! Your Time Mashine got it all wrong. WRONG.
>
>No, it's quite right. You're the one who's wrong, Len.

"Always wrong" to Rev. Jim. :-)

>> "Two-way" in 1906?
>
>Yes. Two way transatlantic in 1906. Voice radio transmission was first
>demonstrated by Fessenden in 1900, not 1906.

Riiiiiight...real-time full duplex? Half duplex? Duplicity?

So, a big deal with everyone jumping on the bandwagon of voice
transmissions 1900 to 1906, right? :-)

>You're reference is six years late. Simply wrong. In error. Mistaken.

Ooooooo! :-)

>> When, between December 26 and 31 that
>> year?!?!?
>
>Nope. November. Look it up.

So, the famous "Christmas Eve broadcast" didn't happen on Christmas
Eve?

Real "high-tech" Tx there. A specially-designed carbon-pile mike
in the antenna feedline making a sort of AM. :-)

>You probably won't do that, because doing so would prove you to be wrong.

What "won't I do?" :-)

>Wrong yet again, Len! Are you going for a record?

No. You must be as judge, jury, executioner wanna-be, the Chief
Justice of the Ethnic Cleanser Corpse.

>>>Fessenden held an amateur license. He was a ham as well as a "pro".
>>
>> Not in 1900 or 1906, Alex Trebek. WRONG.
>
>I didn't say *when* he held the amateur license.

Tsk. You tried to connect the dots. :-)

NOBODY in the USA held ANY official civil radio license until 1912.

I'm just stating a fact that is, most assuredly, very correct.

>Just as you never said when
>you were getting that Extra licesne out of its box.

Just as Reggie Fessenden never became a commercial success
in radio. He went broke more than Edison. Couldn't get enough
commercial backing.

But, you MUST misdirect the subject thread into personalities of
the repliers...that's the only way you can save face in here. :-)

1900 or 1906 is a long time ago, 104 to 98 years to be exact.

You have an affinity for the old stuff. All that "high tech" of old
technologically-primitive radio of nearly a century ago. Tsk, tsk.

>Fessenden was 1XS and later VP9F. See:

Not before 1912 in the USA. :-)

>
>So? That was your *job*, wasn't it, Len?

Assignment. [get with military nomenclature...]

>What's interesting is that you don;t mention that there were more than 700
>*other* people at ADA when you were there...

Yes, at Transmitters (Camp Tomlinson), Receivers (Camp Owada),
Control, Tape Relay at Chuo Kogyo (later inside North Camp Drake).

Eugene Rosenbaum was one of the Transmitters assignees. I've mentioned him before, also SFC Don Ross (Maintenance NCO, had all commercial and top ham licenses of that time), Capt William P. Boss, OIC (Officer In Charge) of Transmitters (ham license). Gene has a ham license, lives in Long Island, NY, he and wife just got back from a European tour. I don't mention the photographic detachment either (for about two decades later the photo people were also categorized as part of Signal Corps). Photo wasn't involved in radio communications.

>So...did you work at all those places or just talk about them?

Yes, I worked IN and AT all those things. Are you the new security chief of the personnel department? Feel free to write all those companies and check up. Here's a bird...I flip it to you...

>Were you in sole charge, or part of a much larger team?

I never worked in a shoe company, "in charge of soles."

Pbthbthbth...

What company does Rev. Jim work for? Choo-choo factory?

>With over 700 people, when you were there. Yet you don't mention the team,
>just yourself. Interesting, very interesting.

About 700 in the Batalion at four different sites and with three different billets. I've RE-mentioned the people I mentioned before; see above. I've also mentioned Jim Brendage, a civilian engineer (DAC) whom I've been in contact with much later (retired, lives in CA) plus some USAF people. USAF took over responsibility of the ADA facilities in 1963 as part of Army downsizing in Central Honshu. I could mention lots of others but they don't have the beloved ham license yet continued to operate and maintain facilities without it or any need for morsemanship.

I find it supremely interesting that you don't know a damn thing about HF communications other than ham radio and what you are spoon-fed by QST and the league.

>And they manage quite well without you, Len.

That's the way the system is organized. It works.

>So?

So sue if ya don't like it. :-)

>How is that relevant to amateur radio?

Nothing amateurish about it.

>You're not the FCC, Len.

You are not the FCC either. So?

>Actually, there are a few hams at FCC, making the rules and recommendations
>about those rules.

Not required in their Statement of Work. Didn't you read yours?

>More importantly, those folks are professional regulatory people. You're not.

You sure as hell aren't a "professional regulator!" You're just a
wanna-be regulator.

>> Riiiiiight...keep the beepers in charge of hum raddio...those mighty
>> macho morsemen keeping the airwaves pristine with the musick of
>> morse as they did in the old, old days. Archaic Radio Service, the
>> ARS of yeasteryear! [all rise...]
>
>Sounds like you are jealous, Len.

Sounds like you've got NO sense of humor when you be tweaked.

Poor baby. A wanna-be regulator and can't control your steam.

>Just a spectator.

No. One of a team, several teams. Doing work. Making things
happen. Making a bit of money, too.

>Just another groundpounder. Heck, even I can use the lingo. But you keep
>reliving the past, leaving out the important details.

"Groundpounder?" That's a military term. You never served.

Try not to be a wanna-be sojer too. Not nice.

Let's see...a fella who doesn't know squat about military comms
comes in here all filthy-languaged with sexual inuendo and tells
all "I never did what I said I did." I then describe (again) what I did
and where, both in military work and civilian work and he still calls
it wrong. Now you come in here thinking "you speak the lingo" and
say it was all no good, "living in the past." You don't know squat
about aerospace, Spaceman Spiff. [your cartoon quit a decade
ago]

>It is. But you're just a spectator there, too.

Yes. So?

You seem to have lost touch with the issue in here...the creation
reason issue being the retention or elimination of the code test for
an amateur radio license.

You keep trying to misdirect these non-discussions into some
weird "desire" for a ham ticket I'm supposed to have. Such as:

>What really burns your bacon is that even with all your alleged professional
>experience, the FCC won't act on your recommendations and those of us who
>actually *are* radio amateurs won't bow down to you.

INCORRECT. WRONG.

I know the process of legislation and rule-making and accept that.
Everyone gets a chance to comment at the FCC and the FCC has
the near-final regulatory say on U.S. civil radio (courts can rule on
that later but that does not happen often). All must live with the
decisions on civil radio matters, even if they are not individually
acceptible.

That's how it is in a democratic-principle government.

Your allegation of some kind of weird "personal vendetta" is just
that, a weird thing. You can't abide the thought of losing the
morse code test so, therefore, you think that all those trying to
eliminate it are abnormal in some regard. Not so.

What IS abnormal is the stridency of the PCTA in the maintenance
of a code test for a ham license without any regard to the changing
times or the fact that morse code manual telegraphy is going down
the tubes in all of radio communications except amateurism.

You cannot justify modern-day rules based on antiquated reasons
which no longer apply. But, you met those antiquated rules and now
insist that all newcomers meet those rules. Why? I don't know why
you are still so adamant about it, can only speculate.

>And despite all your
>verbiage, you can't get some of us to respond in kind to your name calling
>and other word games.

TS. Someone wants to play nasty with me, I play nastier. No problem.

Been there, done that, lots of times.

>How, Len?

How yourself, Kimosabe. Ugh.

>By requiring a simple one-time 5 wpm code test?

By requiring ANY rate code test.

You can NO longer justify its existance by "treaty."

You can NO longer justify its usefulness by anything but tired,
trite, old phrases that ceased being applicable decades ago.

All you or your PCTA ilk can "justify" is all the denigration and
name-calling and general negative inuendo you put on those that
want to eliminate the code test. Not nice. But, you "justify" it
by all kinds of tricks and message subject misdirections, by
calling yourself "superior" to others because you met old
standards.

No sweat to me. If the code test stays, then I hang in there
trying to get rid of it. If the code test is eliminated, then I be

satisfied.

LenAnderson@ieee.org

>Methinks you dost protest too much.

It's possible that it will keep transmitting on lower power.

When was the last time a failed amateur transmitter caused a problem?

It would be sad if that were true. Fortunately, there are other
sources of information on the ARS.

I understand your position and have given it consideration myself. BPL is a MAJOR issue for me, and believe me if other things were not so important I too would vote for anyone but some nitwit that supported it. I honestly think Mr. Bush was just advised wrong on this, and apparantly other, issues.

There are much more important issues here to deal with this election. I am sick to death of how the Democrats are acting. They seem to think getting rid of Bush is more important that saving the country. Sorry, I can't go that route.

I am voting for BUSH.

>> Jimmie! Your Time Mashine got it all wrong. WRONG.

I would say his Time Machine is spot on. In 1900 Fessenden was working
for the U.S. Weather Bureau where he improved their Morse code system
for better weather forecasting and expermenting on his own transmitted
voice for a distance of over a mile. In 1903 he sent a voice message
over a distance of 50 miles and in 1906 he acheived *two-way* voice
transmissions between the Brant Rock Station in Massachusetts and
Machrihanish, Scotland.
Spured by the Titanic disaster, he developed a device to bounce radio
waves off iceburgs miles away. (the first RADAR maybe?)

>frequencies.
>
> The first two-way transatlantic telephony was performed in 1906 at a
>frequency of around 88 kHz.
>
> This is all in the historical record.

A few more points, Mike:

- The 1900 voice radio transmissions were the first, and were over a distance
of about a mile.

- By 1903, Fessenden had extended the distance to 50 miles

- By November 1906, Fessenden had set up stations on both sides of the Atlantic
and was conducting two-way voice transatlantic radio communication.

- The much-heralded Christmas Eve 1906 event was not the first voice
transmission, but rather the first *broadcast*, as it was meant for general
reception by anyone with a suitable receiver. This broadcast was repeated a
week later, on New Year's Eve.

- Fessenden was able to generate intelligible voice-modulated spark by using a
supply frequency above the audible range. However, he found that modulating an
alternator was a superior method.

- A few years ago, some Canadians built a replica of Fessenden's 1900
transmitter, and using a dummy load were able to get it to work. Recoridngs of
the resulting signal are online. While the audio quality is low, the voice is
intelligible.

Fessenden was a true genius, with over 500 patents in a variety of fields. In
my opinion, he is second in significance only to Edwin Howard Armstrong in the
development of modern radio.

Amateur Radio Newsline™ Report 1405 - July 16, 2004

Here's a brief message from Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ:

"The following is an advisory. This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator.
We'd like to thank everyone who helped us during our campaign in June, and we'll have the on-air
thank-yous in the next week or so. Don't forget that the Young Ham of the Year Award is coming
up in the next few weeks, so try to note our support address at the end of the newscast, as we're
not out of the woods, yet.

And now, as every week, the latest breaking news of Amateur Radio follows"

Amateur Radio Newsline report number 1405 with a release date of Friday, July 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL board of directors discuss BPL and other hot issues, it's still a go with ECHO and a
satellite TV company makes a costly move. The details are coming up on Amateur Radio Newsline
report number 1405 coming your way right now.

**

BPL AMONG HOT TOPICS FOR JULY ARRL BOARD SESSION

The American Radio Relay League's board of directors sits down for a weekend of critical meetings.
Amateur Radio Newsline's Mark Abramowicz NT3V has the preview...

--

Broadband Over Powerline internet access is one of the hottest topics on the ARRL board agenda.
It is likely BPL has been the subject of committee meetings leading up to the weekend board sessions.

Dealing with BPL issues is priority No. 1 for ARRL President Jim Haynie WB5JBP. Haynie tells Amateur
Radio Newsline in a recent interview, he expects the Federal Communications Commission will act soon

on the matter. While it's difficult to put a timetable on how soon, Haynie tells us he wouldn't be surprised to see the panel come out with a decision before the presidential election.

President Bush is solidly behind BPL as part of his broadband-technology initiative - this despite Haynie and the ARRL's plea for him to reconsider. Democratic challenger John Kerry's campaign position speaks of a variety of technologies for broadband but does not directly mention BPL.

Haynie concedes the way the political winds are blowing, some form of BPL activity is likely to be approved.

But the 64-thousand-dollar questions are: How much and where?

With the National Telecommunications and Information Administration already raising red flags about interference, and a BPL industry spokesman throwing verbal missiles at the amateur community, Haynie tells us here at Amateur Radio Newsline he's hoping some FCC commissioners might re-examine their BPL positions.

Haynie calls the recent suspension of the Alliant Energy BPL project in Cedar Rapids, Iowa, an important step. And, Haynie says, he suspects the electric utility industry will have to consider any fallout and who could be next to answer an interference complaint at the FCC.

As to complaints, Haynie says the ARRL will be especially vigilant if BPL becomes a reality. He says the organization will be before the FCC to press interference issues with those who are cause them.

And, he has told Amateur Radio Newsline, he will also press the FCC to fully empower those charged with enforcement issues in the agency to go after BPL providers who fail to resolve any interference complaints.

Among the other items on the board agenda, the status of amateur license restructuring which includes provisions for a "no-code" HF license for entry-level hams.

The July board meeting also is where the announcement of the winner of the Hiram Percy Maxim award comes along with host of other ARRL awards.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Check next week's Newsline for a report on the ARRL board happenings.

(ARRL, NT3V)

**

HAMSATS: ECHO TESTS CONTINUE

Testing of the newest ham radio satellite, ECHO, continues and all is, as they say in the space biz…
nominal. The remainder of this week is expected to be spent loading some new code, testing the S
downlink and the UHF B transmitter. Note that the S downlink, when in digital mode, will always be
at 38.4 kilobits or higher. It is not capable of 9.6 kilobits due to limitations involved in making
it work properly at speeds up to 76.8 kilobits. AMSAT is pleased so far with the strength of the
2.45W S downlink. At times the UHF A transmitter will be off or at very low power. They will also
be testing transmitters at higher data rates. Listeners should not be surprised or alarmed if the
UHF A transmitter is not on or if they are unable to copy it at 9.6k during some orbits.

The Command Team is carefully checking off the tests and measurements that are part of the commissioning
process. They ask everyone to be patient. And again, AO-51 is not yet open for use. Any transmissions
aimed at AO-51 by other than command stations will slow down the process and delay the day when it is
open for all to use.

The coloradosatellite.com/echo web site was off line for a few hours last weekend due to a data center
move. Stations who want to upload telemetry should find it on line now.

(WD0E, AMSAT)

**

SPACE: ARISS SCHOOL CONTACT LIST UPDATED

While we're on the subject of ham radio in space, the list of Amateur Radio on the International
Space Station, or ARISS, school contacts has been updated. To check if a school in your area is on
the list or to find out how to schedule a contact at your school please visit www.amsat.org or

http://ariss.gsfc.nasa.gov. There is no "www" in that last URL. Of course, these addresses will
be in the print edition of this week's Amateur Radio Newsline report.

(ARISS)

**
Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations
around the world including the Los Angeles Unified School Amateur Radio Association Network serving
the students in Los Angeles, California.

(5 sec pause here)

**

RADIO LAW: MDS & ITFS SPECTRUM RECHANNELIZED - MDS BECOMES BRS

Big changes are coming to the Multipoint Distribution Service and the Instructional Television Fixed
Service. These are better known by the acronyms M-D-S and I-T-F-S.

As part of its ongoing effort to promote the deployment of wireless broadband services, the FCC has
adopted a Report and Order and Further Notice of Proposed Rulemaking dramatically changing the rules
governing MDS and ITFS operations in the 2500-2690 MHz band.

For starters, the Order renames the M-D-S service the Broadband Radio Service or B-R-S. It does
however maintain the I-T-F-S label for Instructional Television Fixed Service licenses and operations.
The newly rechannelized I-T-F-S slash B-R-S band will group high and low power operations together
in spectrum chunks. This, the agency says, will make low power two-way data communications possible
in some parts of the band.

Finally, to make all this happen the band will soon become 5 MHz larger. This, as restructuring of
other services in the adjacent electromagnetic spectrum permits the FCC to extend the low end of
this band down to 2495 Mhz. (CGC)

**

RADIO LAW: FCC CLARIFIES ITS ROLE REGARDING INTERFERENCE AND CUSTOMER EQUIPMENT

The FCC has clarified its role regarding interference issues, consumer antennas and Part 15 unlicensed

equipment. Regarding antennas, we all know that consumers have the right to install and operate -
on property they control - antennas for over-the-air broadcast, terrestrial and satellite reception.
Now the regulatory agency has added license-free Wi-Fi antennas of one meter or less to the list of
what may be installed. The same one meter size limit also applies to antennas used in conjunction
with fixed wireless services that are licensed by the FCC.

In the area of radio frequency interference or R-F-I, the FCC says that it and it alone holds exclusive
jurisdiction over the regulation and resolution of R-F-I issues. It adds that regulation of R-F-I
phenomena shall be imposed only by the Commission noting that both the FCC and the federal courts
have overturned attempts by third parties to regulate RFI matters. This, in light of the FCC's
exclusive authority in this area.

To read more go to:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1844A1.doc
(CGC)

**

ENFORCEMENT: CATV LEAK RESULTS IN $6400 FINE

A cable TV system in Cornersville, Tennessee has been fined for excessive signal leakage in the
aircraft communications band. Small Town Communications Partners has been ordered to pay $6,400
for excessive leakage on 121.2625 MHz.

At that frequency a maximum leakage of 20 microvolts per meter at a distance of at least three
meters from a CATV cable is allowed. The FCC says that the measured leaks in this case ranged
from 255 microvolts per meter to 2080 microvolts per meter.

The Commission notes that excessive cable TV leakage can interfere with a wide variety of communications.
This can include emergency services, aviation, and Amateur Radio.

More is on-line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-1751A1.doc
(CGC)

**

ENFORCEMENT: DIREC-TV FINED FOR UNAUTHORIZED SATELLITE MOVE

The Commission has proposed an $87,500 fine against DIRECTV, Inc.
This for repositioning its

DIRECTV 3 satellite without FCC authorization.

DIRECTV had filed a request with the FCC for special temporary authority to relocate the DIRECTV 3 bird, but admits that its employees began repositioning the satellite the next day, without waiting for Commission approval.

In setting the amount of the fine, the FCC noted that strict adherence to the rules governing modification of satellite authorizations is critical to minimizing the risk of collisions between satellites. (CGC)

FCC INTRODUCES NEW EXHIBIT ON HISTORY OF THE INTERNET

The FCC has introduced the third in a series of exhibits on the history of various communications technologies. The latest presentation focuses on the history of the Internet, including the communication technologies used to access the World Wide Web. More is on line at www.fcc.gov/omd/history (CGC)

ON THE AIR: THE .275 YOUTH GROUP NET

Timothy Little, W-8-L-B-O has announced the start-up of a new 40 meter 275 Youth Group. According to his posting on the Q-R-Zed dot com super site, this is an informal ragchew group that meets every Saturday at 9:00 P.M. Eastern time on 7 point 275 MHz, +/- 10 KHz.

Little says that the main purpose of the net is to promote the use of HF by younger hams so that they can get to know one another. The net also tries to help them perfect their operating skills including Morse code operation and D-Xing.

Anyone young or young at heart is invited to take part. More information about this net is on line at www.275youthgroup.4t.com)QRZ.com)

**

THE SOCIAL SCENE: NORTHERN ALABAMA DX BANQUET

The North Alabama DX Club has announced that its annual DX Banquet will be held in conjunction with this year's Huntsville, Alabama hamfest on August 21st. The

guest speaker will be Jess
Lewis, K-R-4-O-J, from the T-33-C 2004 Banaba Island DXpedition.
Tickets are $25 each and available
from the NADXC in care of Vic Holland, 219 Cedar Pond Drive,
Madison, Alabama 35757-7633. For
additional information phone 256-721-9106 or E-mail k4rvh@arrl.net.
(E-Mail)

CHANGING OF THE GUARD: ASCII DEVELOPER NOW S.K.

Bob Bemer, a computer pioneer who published warnings of the Y2K
problem in the early 1970s and
helped invent a widely used coding system, has died. This,
following a battle with cancer.

While not a radio amateur, Bemer played a major role in how the
world's computers operate and,
indirectly, in how hams communicate today. He began his career in
1949 working at companies including
Rand, IBM, and Honeywell. He also helped develop the ASCII coding
system that is used to represent
letters, numbers and other characters in the data world. He also
contributed the escape key and the
backslash to the computer language.

Bemer first published warnings of the Y2K computer problem in 1971
and again in 1979. He also made
several public appearances to discuss the issue in the years leading
up to the millennium.

Bob Bemer died Tuesday, June 22nd at his home some 120 miles west of
Dallas, Texas. He was 84. (Published news reports)

EMERGING TECHNOLOGY: FEW KNOW ABOUT DIGITAL TV

The General Accounting Office says that more than 80 percent of
Americans are either unaware or only

"somewhat aware" of the transition to digital television signals. But federal officials have
expressed shock and indignation at the survey results.

Congress plans to sell the analog spectrum that will become available when TV stations convert from
analog to digital. Lawmakers are counting on the money to help balance the budget. However, the
digital transition may be years away unless more consumers start buying digital TV sets and most
are not willing to pay the additional cost. (TechBriefs)

**

EMERGING TECHNOLOGY: CELL PHONE "WAITING LOT" IN OPERATION AT LINDBERGH FIELD

Following the lead of several other busy airports around the nation, officials at San Diego's
Lindbergh Field have opened a convenient "cell phone waiting lot." This is a place where drivers
can park for up to an hour while awaiting phone calls from arriving passengers. Airport managers
hope that the new lot will cut down on the congestion caused by vehicles circling the airport loop,
waiting to pick up passengers. More is on-line at http://tinyurl.com/yplws (CGC)

**

ON THE AIR: 6 METERS ACROSS THE ATLANTIC POND

It's looking like it could be a big DX season for hams and SWLs on both sides of the Atlantic.
GB2RS reports that during a Sporadic E opening on June 19th a path opened from Europe to North
America. The Maximum Usable Frequency rose at least as high as the FM broadcast band. A North
American station was received on and recorded at 88.5 MHz between 13:10 and 13:30 UTC. During
the event, trans-Atlantic television carriers were also received on 55.25, 61.25, 67.25 and
83.25 Mhz. (VHF reflector)

**

50 & ABOVE: 144 MHZ QSO DATA WANTED

If you've made any long distance 2-meter contacts in excess of 1,600 miles, or 2,600 kilometers,
Volker, DF5AI wants to know the details of your contacts. He's interested in the frequency, the
UTC time & date, and particularly the grid square locator. He's

also quite intrigued in double-hop
sporadic E skip. He can be contacted via his website. It's in
cyberspace at www.df5ai.net (VHF Reflector)

**

WORLDBEAT - ISRAEL: NEW SIX METER BEACON IN ISRAEL

4X4SIX is the new 6 meter Israeli beacon operating on 50.080 MHz.
4X6ON and 4Z5AY built the
station which announces its call sign on CW around the clock. The
beacon is located in grid
square KM72JB running 5 watts out to a J-Pole antenna. (Hagal)

**

DX

In D-X, the Ohio Penn D-X Newsletter reports that DL3PS and VE3ZIK
will be active on 40-6 meters
from Bilice, Croatia through July 31st. The call signs being used
are 9A slash VE3ZIK and 9A slash
DL3PS. While VE3ZIK is one of the Web Administrators for the
www.contesting.com info website, there
will be no QSL information there until August 3rd.

Meantime word that D-H-9-Y-A-T will be active portable CU7 from the
Azores. Listen for him from
August 3rd to the 20th. Activity will be on 40, 20 and 15 meters
QRP on CW. QSL this operation
via the bureau. (Various DX sources)

**

THAT FINAL ITEM: MUSEUM SHIPS CASTING FOR CONTACTS

And finally this week, dozens of ships from around the world
get "radio-active" July 17th and 18th
for the annual Museum Ships Weekend Event. Amateur Radio Newsline's
Mark Abramowicz, NT3V is back
with us and he checks in on preparations being made about the U.S.S.
New Jersey....

--

Dave Burgess, WA2TVS, is chief engineer for the Battleship New
Jersey Amateur Radio Station aboard
the New Jersey. Look for NJ2BB (New Jersey 2 Big Battleship) to be
very active during the event.

Burgess says the weekend was the brainchild of the USS Salem Radio
Club, K1USN, in Salem, Mass.
He says it actually started in 1997 as a way to get museum ships at
dry-docks around the world to

get on the air by way of amateur radio.

Burgess says it's the New Jersey's third year taking part.

"Last year, the number grew to about 87 or 88," Burgess says. "Right now I think the pre-registration right now is about 77. But seems like there's always a half a dozen or so right at the last minute that get their act together and get on the air."

Burgess says the event gives radio operators around the world a chance to contact a variety of these special ships and their volunteer crews.

"One is just to have fun and a reason to get the ships on the air," Burgess says. "Of course, whoever is in charge of taking care of the ship gets some PR out of it, we hope.

"They have an opportunity for the public to see amateur radio which is new to a lot of people. But to advertise the ships worldwide. I never knew there were so many ships out there. Just museum ships that is. It's amazing how many there are out there and what their diversity is."

Burgess says there are tugboats, river boats, submarines and even a midget German submarine left over from World War II. All are part of the museum ship flotilla.

He says there's no contest exchange involved in this one. Ship operators get on the air and look to contact land-based stations as well as other museum ships. It's a chance, Burgess says, to showcase a ship and its history. And, of course, there's an exchange of QSL cards and you can be guaranteed some pretty impressive history and photos of the ship you contact.

For the New Jersey's part, Burgess says he's planning an active weekend with operations through the evening of July 18th.

"We'll be on all HF bands, probably concentrating on 20 (meters), but we have capabilities (with the) ship's antennas to do 160 through 10 meters," Burgess says. "We'll be on all modes. This year we'll be introducing true, green-key operation for teletype. We'll be using the ship's old mechanical teletype machines to get on the air."

Look for NJ2BB, Burgess says, for a memorable QSO and QSL.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Camden, New Jersey, the home of the

Battleship New Jersey.

--

Thanks Mark. This sounds like a great opportunity to collect some very interesting "wall paper" for
the ol' shack.

**

Maybe you can provide insight as to why you seem compelled to attack radio amateurs who don't agree with your views and why you take constant swipes at the ARRL. After all, you haven't been a radio amateur in the past. You aren't a radio amateur in the present and there is no indication that you'll be a radio amateur in the future. What gives with you?

Len, just get the damm license. It ain't that hard. Hell even 5wpm.
I did it and I'm no good at sort of "motor skill" kind of thing.
Then get on the air some. Then you can speak with some creditability
here and other forums on ham radio.

Grandma Goldie? :-)

They can't recapture their physical youth. They can improve their
mental youth. Some don't. Some, like Rev. Jim, are very into the
"stern headmaster" role playing, making like he #1 Great Guru on

the history knowledge of a century ago.

History of the earliest accomplishments doesn't tune a final or
align a receiver front end nor measure any antenna. They could
concentrate on those basics first, but it is much easier for them
to just toss their cookies in here, pretending the "know" things.

>> They don't really give a damn about anyone else. They want to

>
>They can lead amateur radio on a death march. Anyone speak Tagalog?

Dinna wurra, laddie. The beepers will still be re-enacting their
own radio civil wars long into the future. I suppose they imagine
that if they bring it up enough times some more might believe in
it as fervently as they do.

Yup. They "bring it up" in projectile form.

>> Regression is the better part of their valor. Or stasis.
>
>Valor? Without integrity or honor? Best they can do is Status Quo.
>Forget about leadership.

We will be lead by the beepers, not led.

Plumbium that is, one part of solder. But with cold solder joints in
their thinking.

<mcoslo@adelphia.net> writes:

> Looking at the Lenover21 vs N2EY debate on the first voice
>transmission, maybe we could make some headway by the following:

Mike, this is all old ground that was ground under the anguished
trodding feet of the exacting headmasters months ago. :-)

A century in the past. An oddity insofar as technology is concerned.

Anyone (other than the one in my ancestral land) using alternators
or spark transmitters now?

> This is all in the historical record.
>
> Jim accepts it, and Len appears not to.
>
> Len, what is your rationale for that?

Doesn't matter what I write in here. Headmaster and Deacon,
the "right" Rev. Jim, will say I am "flat-out wrong," "incorrect"
and so forth, no matter what the subject. :-)

The only thing I'm sure about is that I was helping to keep HF
communications alive and well across the Pacific a half century
ago...24/7 service...never once having to use morse code then
or in the next half century.

If you guys want only to natter about ancient history and argue
the whichness of the what on technologies long ago kissed bye-
bye by everyone, fine. If Jeopardy ever has questions on ancient
radio days' technologies, I really doubt if any of you PCTA are
going to pull off a Ken Jennings. :-)

By the way, consider what became of ol' Reggie after the 20s.
Not much left of his "technology" in the world of radio. Some
consider him a "genius." Those folks NEED hero worship
objects for some reason. Bottom line was that Reggie just
couldn't hack it in trying to be a part of Big Radio Business not
long after that famous Christmas Eve broadcast.

You might say ol' Reg just fired up, tuned out, and went QRT.

He did invent the first heterodyne receiver (of a most crude sort).
Ed Armstrong came along and invented a great improvement,
the superheterodyne. Tubes proved superior to lil bitty spark
RF generators. Reg just didn't work much with tubes.

You too can make a "heterodyne receiver" much like Fessenden's. Just get a crystal set and add a little RF generator tuned to close to the signal frequency. Sort of a "detector and BFO" without the rest of the receiver. [a direct-conversion receiver is much easier and more sensitive, but let's not quibble among the ancient radio re-enactors... :-)]

I think most hams will know what a "superhet" receiver is. How many know what a "het" receiver is? :-)

It is the epiphany of knowledge. [so they say...]

>> >I don't think Steve and the others on here are representative of
>> >top-of-the-line amateurs at all.
>>
>> No? :-)
>
>Gawd NO!

Don't tell Them that! WW3 will break out!

>> I agree with you...knowing more radio amateurs off-line than on-
>> line. KD6JG is what I consider a good friend and I'm hoping to
>> say hello to him in mid-California a bit later. W6MJN was Best
>> Man at my wedding. That's just two out of many. <shrug>
>
>Many.
>
>> >As a matter of fact, I feel kind of sorry for Jim. I think he's hung in
>> >here about a year too long. He should have bailed before his lost
>> >his last remnant of dignity.
>>
>> Jim was on the AOL ham pub before I saw him on r.r.a.p. Was
>> like a Newington-south recruitment drive on AOL to me. Came
>> off like an 80-year-old OF. QED. Couldn't take much
>> controversy then, can't now.
>

>Sorry to hear that. So long banging the same drum. Time for him to
>get a new skin (a thicker one).

...or quit the CD of that holiday favorite, "Little Drummer Boy." :-)

>> >His
>> >post about "Morse Code Exams are a disincentive to CW use" really told
>> >the tale. Since then he's gone over to the dark side and can't find
>> >his way back. He's truly committed.
>>
>> All that "committment" gets to all. Amateur radio is NOT a
>> marriage and life ever after. The PCTA cannot change their minds
>> nor let anyone else change their minds. Not ever! :-)
>
>Closed Mind.

Lifestylers try for that. Believers LIVE it.

>> "MARS >>IS<< amateur radio" is from an extreme case. :-)
>
>As Buzz Light Year says, "To Insanity and Beyond!"

Buzz has more animation...
